The screenshot displays the JSN Dome Joomla template homepage with the following layout and content:

- Header:** Features the "JSN Dome Logo" on the left, a "Top Menu" bar with "Product Tour" and "Get It Now" buttons in the center, and "Social icons" on the right.
- Main Navigation:** Includes a "Main Menu" and a "Colors Variation" dropdown menu.
- Left Sidebar:** Contains a "Module Styles" section with a brief description and a "Take a quick tour" button.
- Hero Section:** Shows a large image of colored pencils with the title "JSN ImageShow". Below it is a descriptive text block.
- Content Area:** Contains several modules:
 - A "Module Styles" module with a sidebar menu including "Layout", "Colors Variation", "Menu Styles", "Typography", "Mobile Ready", and "RTL Support".
 - A "Home" module featuring a "Flexible Layout" image of a laptop.
 - A "Module Styles" module featuring a "Stunning Colors" image of colored pencils.
 - A "Module Styles" module with compatibility information for Joomla 2.5 and 3.0.
 - A "Module Styles" module with a "Written by Super User" section and a "Free download" button.
 - A "Module Styles" module with a "6 EASY STEPS TO BUILD A JOURNAL WEBSITE" image and a "Download Free" button.
 - A "Module Styles" module with a "Native RTL Support" image and a "Read more..." link.
 - A "Module Styles" module with a "Easy to Start" image and a "Read more..." link.
 - A "Module Styles" module with a "Docs / Sup" image and a "Read more..." link.
 - A "Div Menu" module at the bottom left.
 - A "Module Styles" module at the bottom center.
 - A "Module Styles" module at the bottom right with copyright and license information.

JSON Dome FAQs

	Questions	Answers
1	How to start to use JSON Dome quickly?	Install JSON Dome & install sample data
2	How does JSON Dome look like on mobile devices?	Responsive design PRO / Mobile settings
3	How to add Google Analytics code to JSON Dome?	More details
4	How to restore the original data on your website?	More details
5	Where to download the latest version of JSON Dome?	Customer Area
6	How to update JSON Dome from an old version?	More details
7	How to get support with JSON Dome Free Edition?	Free product support on forum
8	How to get support with JSON Dome PRO Edition?	More details

Introduction

Thank you for your interest in **JSON Dome** template. We really appreciate your choice and truly hope our product will bring more value to your website and business.

To have the best template understanding, we recommend you read the documentation in the following order:

1. **JoomlaShine Template Configuration Video** – a short video tutorial about the fast way to learn JSON Gruve template. [Click here](#) to see the video tutorial.
2. **JSON Dome Configuration Manual** - This document will give detailed information about each template feature and how to apply it to your real website.
3. **JSON Dome Customization Manual** - This document will show you how to customize the template to make it suit your needs.

You can print all documents for convenient reading.

Attention!

Features marked with **PRO** are available only in **JSON Dome PRO Edition** and are NOT available in **Free Edition**.

JSON Template Framework

JSON Dome as well as all other Joomla templates from JoomlaShine is built based on **JSON Template Framework** – A clever template control system. Currently, it utilizes Bootstrap to provide users an intuitive interface. JSON Template Framework will be installed automatically when you install JSON Dome.

There are a lot of features in JSON Dome come from JSON Template Framework: Sample data installation, files modification checking and more. To learn more about it, please check [blog posts about JSON Template Framework on JSON blog](#).

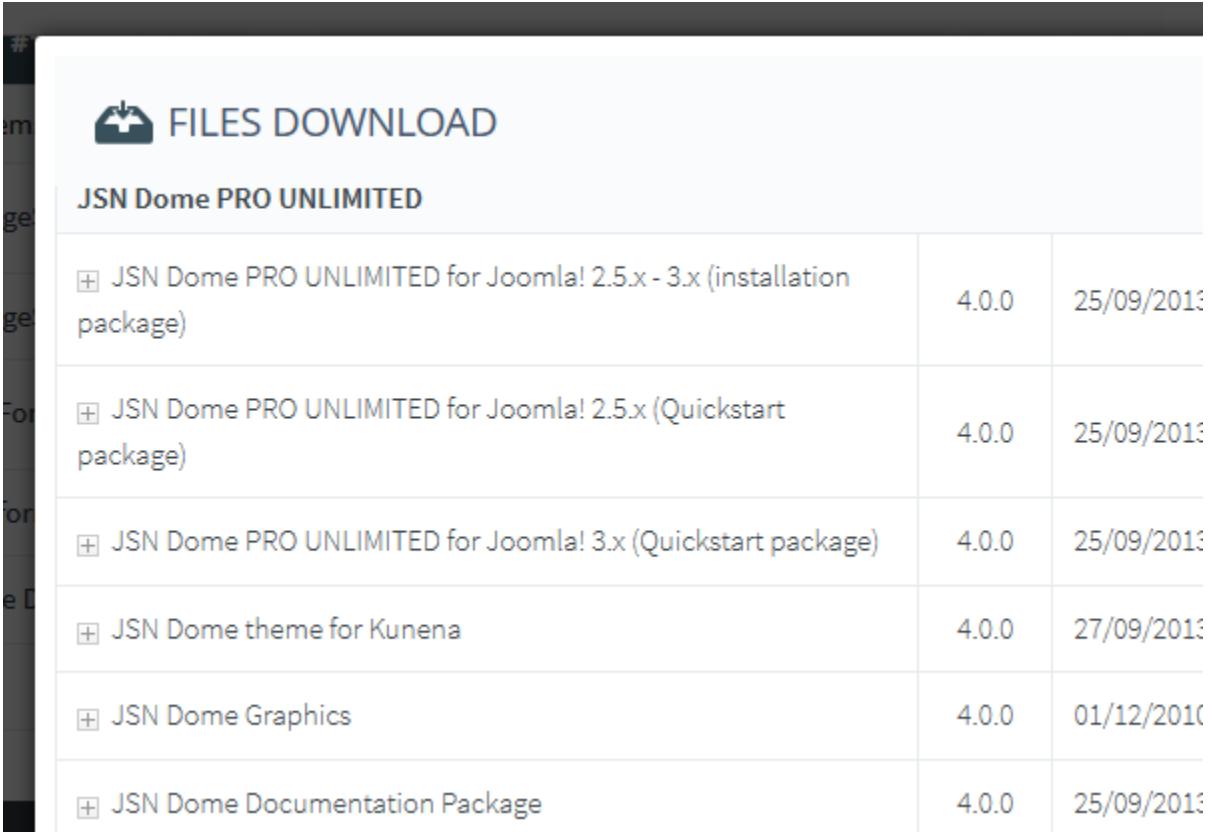

You can update it whenever a new framework version is released. For more details, please check the section [Template Information & Auto Update notification](#)

Hot Features Overview

Joomla! 2.5 and Joomla! 3.x support

Joomla! 2.5 and 3.x support

JSON Dome PRO UNLIMITED			
[+] JSON Dome PRO UNLIMITED for Joomla! 2.5.x - 3.x (installation package)	4.0.0	25/09/2013	
[+] JSON Dome PRO UNLIMITED for Joomla! 2.5.x (Quickstart package)	4.0.0	25/09/2013	
[+] JSON Dome PRO UNLIMITED for Joomla! 3.x (Quickstart package)	4.0.0	25/09/2013	
[+] JSON Dome theme for Kunena	4.0.0	27/09/2013	
[+] JSON Dome Graphics	4.0.0	01/12/2010	
[+] JSON Dome Documentation Package	4.0.0	25/09/2013	

Product files download

In [Customer Area](#), you can choose to download appropriate installation file for the Joomla! version you are using.

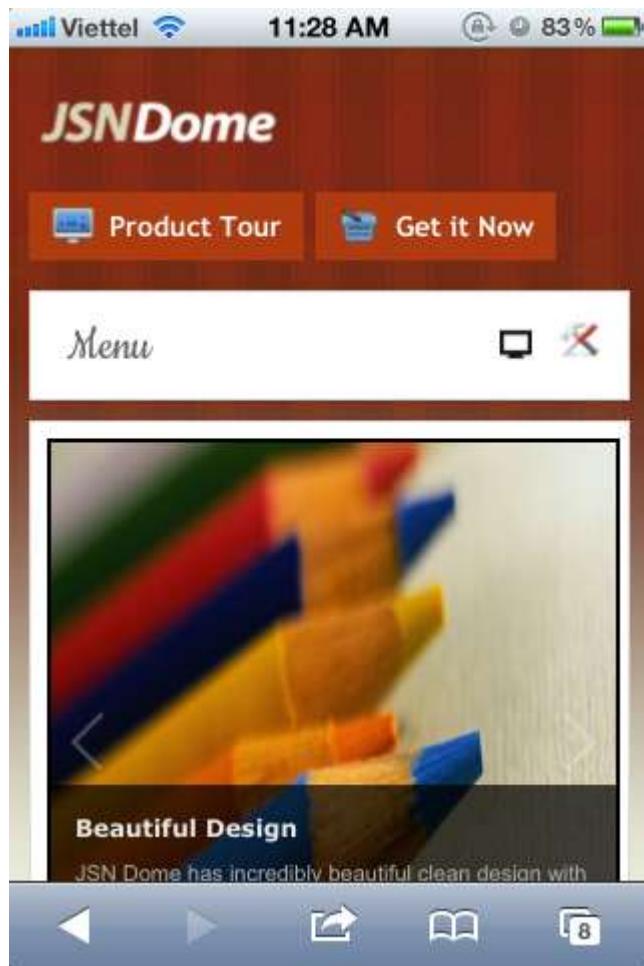

- **JSON Dome XXX for Joomla! 2.5.x – 3.x (installation package)** where XXX is the template edition you have (FREE, PRO STANDARD or PRO UNLIMITED) – A data package which allows you to install JSON Dome template on available Joomla websites.
- **JSON Dome XXX for Joomla! YYY (Quickstart package)** where YYY is the Joomla version (2.5.x or 3.x) – It contains both the latest Joomla installation file and JSON Dome data. You install this package normally as the flow to install Joomla. After that, you will get a totally new Joomla website with JSON Dome template and its sample data.

Besides these, you can download **JSON Dome Documentation package**, **JSON Dome Graphics PRO**, etc.

Responsive design PRO

All JoomlaShine.com templates are responsive. They work normally on for modern mobile devices such as iPhone, Android and Windows mobile-based.

Mobile layout overview on iPhone

Header and top content

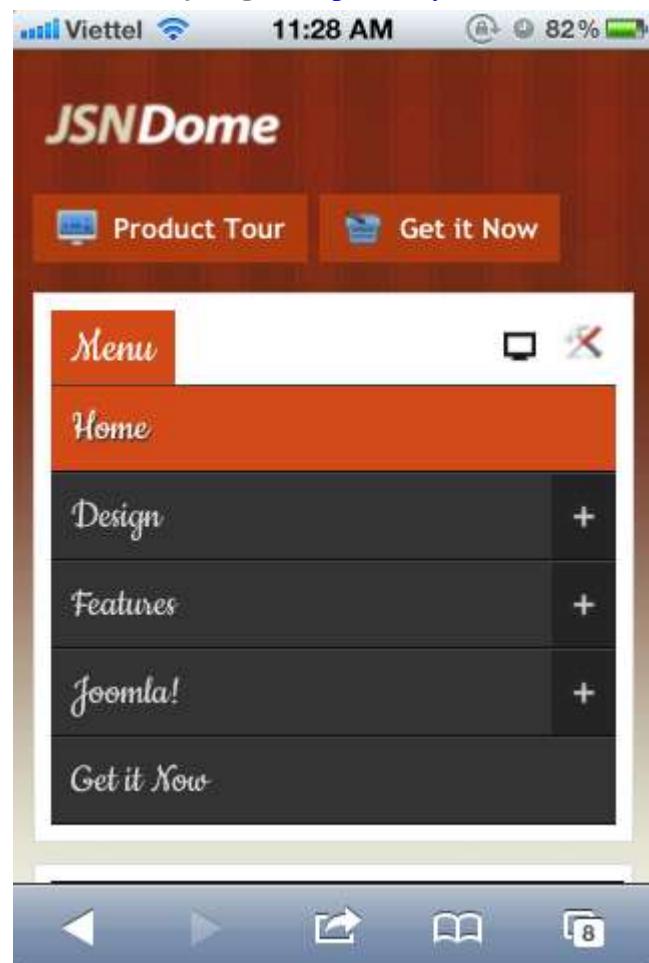

Main body

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Bottom content

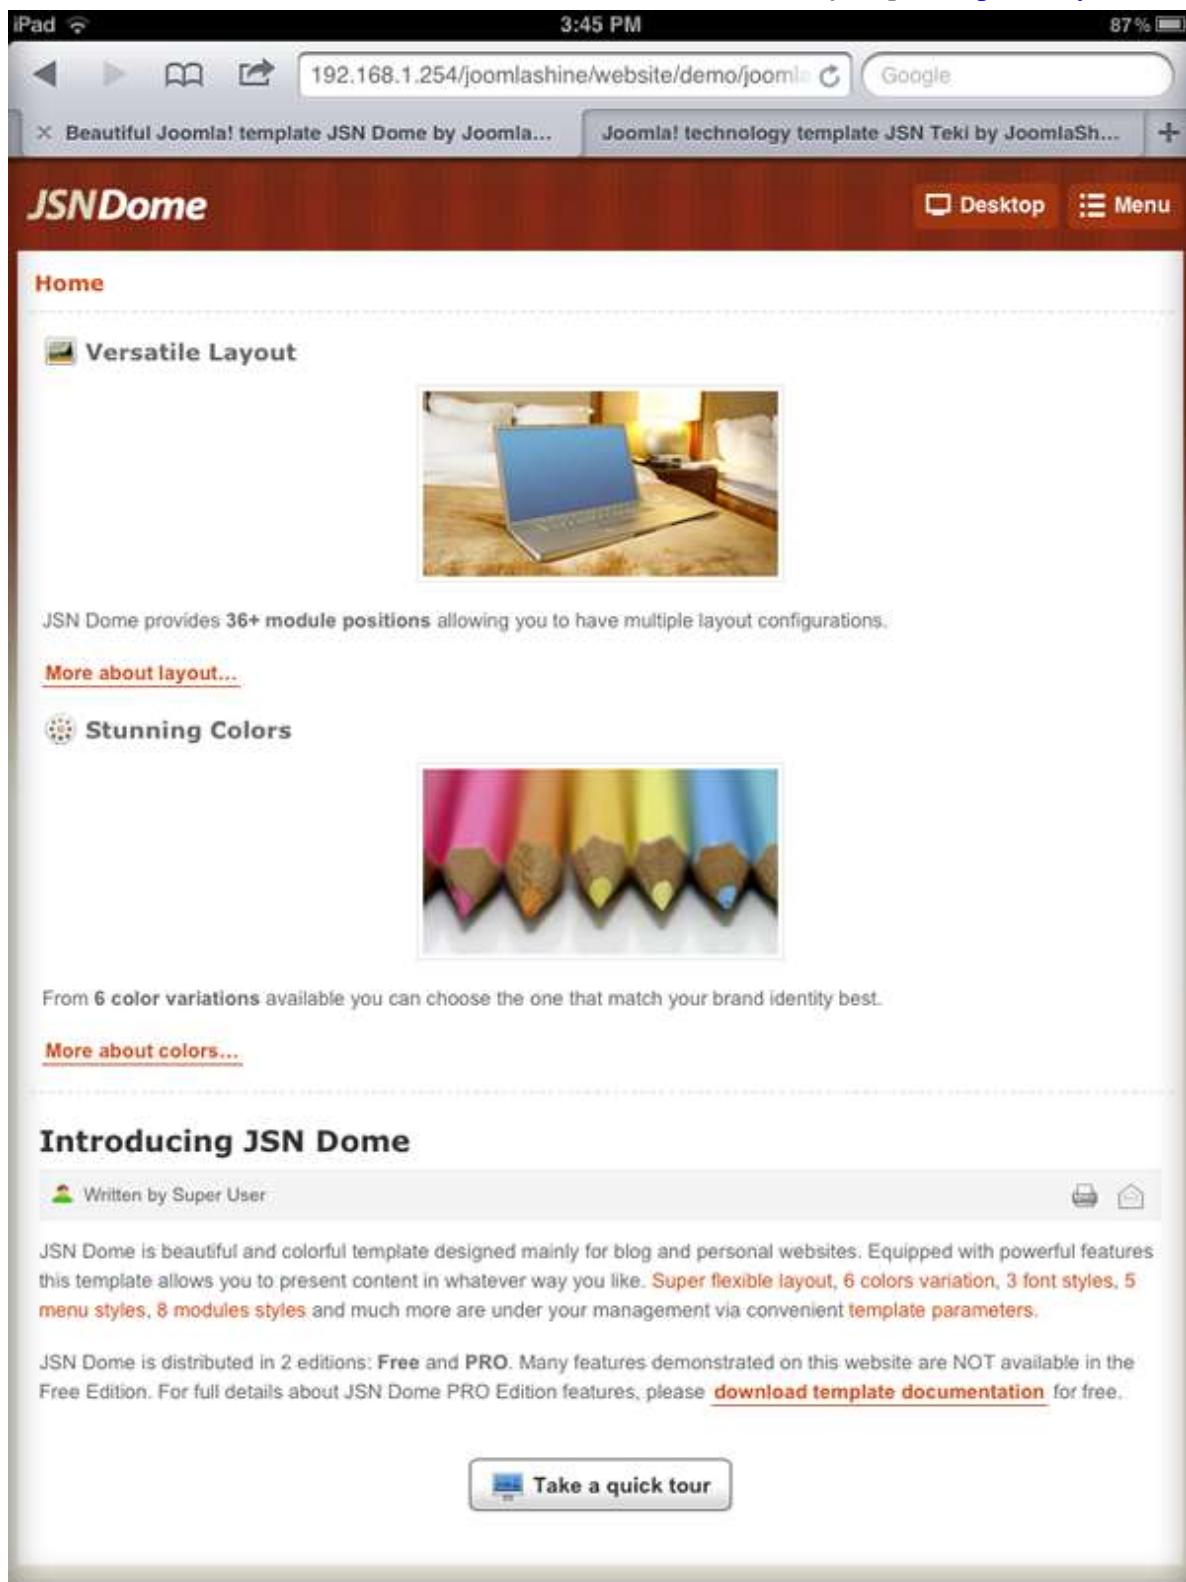

Mobile menu and footer

Both of the above screenshots are taken from iPhone 4S, but the mobile edition works well in all modern large screen devices based on Android and Windows mobile as well.

Mobile layout overview on iPad

Both vertical or horizontal iPhone and vertical iPad are presented in the same way with 2 columns layout, horizontal iPad is presented with 3 columns layout.

Extended Styles

Kunena Support **PRO**

The screenshot shows the JSN Dome theme applied to a Kunena forum. The top navigation bar includes links for Home, Design, Features, Joomla!, Get it Now, and Kunena. A red header bar displays the title "JSNDome". Below the header, a breadcrumb trail shows "Home > Kunena". A toolbar provides options like "Mark all topics read" and "Board Categories". The main content area features a "Main Forum" section with a message board. It contains two items: "Welcome Mat" (1 NEW) and "Suggestion Box". The "Welcome Mat" section encourages members to introduce themselves and share interests. The "Suggestion Box" section invites users to provide feedback. Below this is a "Who's Online" section showing 1 Member and 4 Guests online, with a user icon for "admin". A legend defines icons for Site Administrator, Global Moderator, Moderator, Banned, User, and Guest. At the bottom is a "Kunena Forum Statistics" section with a bar chart, showing metrics like Total Messages, Total Subjects, Total Sections, Total Categories, Today Open, Yesterday Open, Today Total Answer, and Yesterday Total Answer. It also displays the total number of users (1) and the latest member (admin). Buttons for "User List" and "More Statistics" are available.

JSN Dome theme for Kunena

After purchasing **JSN Dome template**, you can download **JSN Dome theme** at the Customer Area. This theme helps you build a nice forum easily.

6 colors support

JSON Dome theme comes with 6 colors which go with 6 defined colors of JSON Dome template: Blue, red, green, violet, orange and grey.

Get free e-book to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

RTL Support

To set RTL support to Kunena, you just need to add **&jsn_setdirection=rtl** to the end of the website address. Then, add **&jsn_setdirection=ltr** to switch it to normal layout.

The screenshot shows the JSNDome Joomla template with the Kunena forum module. At the top, there's a navigation bar with links for 'Get it Now' and 'Product Tour'. The main header says 'JSNDome'. Below the header, the Kunena logo is visible. The page title is 'Kunena' and the breadcrumb trail shows 'Kunena < Home'. The main content area is titled 'Main Forum' and contains two sections: 'Welcome Mat' and 'Suggestion Box'. The 'Welcome Mat' section has 0 replies and 1 topic, with a message encouraging members to introduce themselves. The 'Suggestion Box' section also has 0 replies and 0 topics, with a message asking for feedback. At the bottom, there's a 'Who Is Online' section showing 1 member and 4 guests online, with a legend for user roles like Site Administrator, Global Moderator, Moderator, Banned, User, and Guest. A small admin icon is also present.

Attention!

Kunena is not included in the JSON Dome template package. You can download Kunena freely at <http://www.kunena.org/>

K2 Support

Here is how K2 and JSN Dome combination looks like. You can see all **K2 components** such as K2 Comment, K2 Content, K2 Users, TagCloud, Article, etc work well with JSN Dome.

The screenshot displays the JSN Dome Joomla template. At the top, there's a navigation bar with links for 'Product Tour', 'Get It now', 'K2 Categories', and 'New Article'. Below the navigation is a main menu with 'Home', 'Design', 'Features', 'Joomla!', 'Get it now', and 'K2 Component'. The 'K2 Component' link is highlighted with a red background. The main content area shows a list of K2 comments on the left and a detailed view of a K2 content item on the right. The K2 content item features a title 'Super User', a website URL (<http://www.joomlashine.com>), and an email address (admin@admin.com). It includes a small profile picture of a man and a descriptive text snippet: 'Nullam vel mi in eros venenatis commodo. Morbi quis sem at elit porttitor condimentum nec id risus. Mauris dictum luctus sodales.' Below this, there's a large image of a desk with papers and a computer monitor, followed by a text excerpt: 'The 'de facto' content solution for Joomla! professionals!' and a timestamp ('Thursday, 09 August 2012 09:21'). To the right of the content item, there's a sidebar titled 'K2 Content' with a sub-section for 'The 'de facto' content solution for Joomla! professionals!' featuring another profile picture and a snippet of text: 'You've already been there... Joomla! is a great content management system. In fact it's considered one of the best in the world. But the default article system in Joomla! is so spartan! Just a title, your content body and that's it. This is where K2 comes in.' Below this, there are 'Read more...' and 'Read 120 times | 2 comments' links. Further down the sidebar, there are 'Tags: cloud' and 'Published In: K2 Category 2' links. At the bottom of the sidebar, there's a section for 'Copy of Custom Admin Templates and Calling Specific Extra Field Data k2' with a timestamp ('Wednesday, 08 August 2012') and a 'Read more...' link.

JSN Dome is fully supported K2 style

Attention!

K2 is not included in the JSN Dome template package. You can download K2 freely at <http://getk2.org/>

After enabling CSS/JS compression

Get free e-book to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

This feature significantly reduces http request number to server as well as overall loading size, which results in 35% performance boost. For more information, please read the section **Compress CSS/JS** in this document.

Read more: Section [CSS/JS Compression](#) PRO

UniIcons PRO

JSON Dome is shipped with **20 carefully selected icons** which can be used for multiple purposes. We call this concept **UniIcons**.

Here you can see quick examples of how these beautiful icons can be utilized.

UniIcons attached to menu items

UniIcons attached to links

UniIcons attached to module header

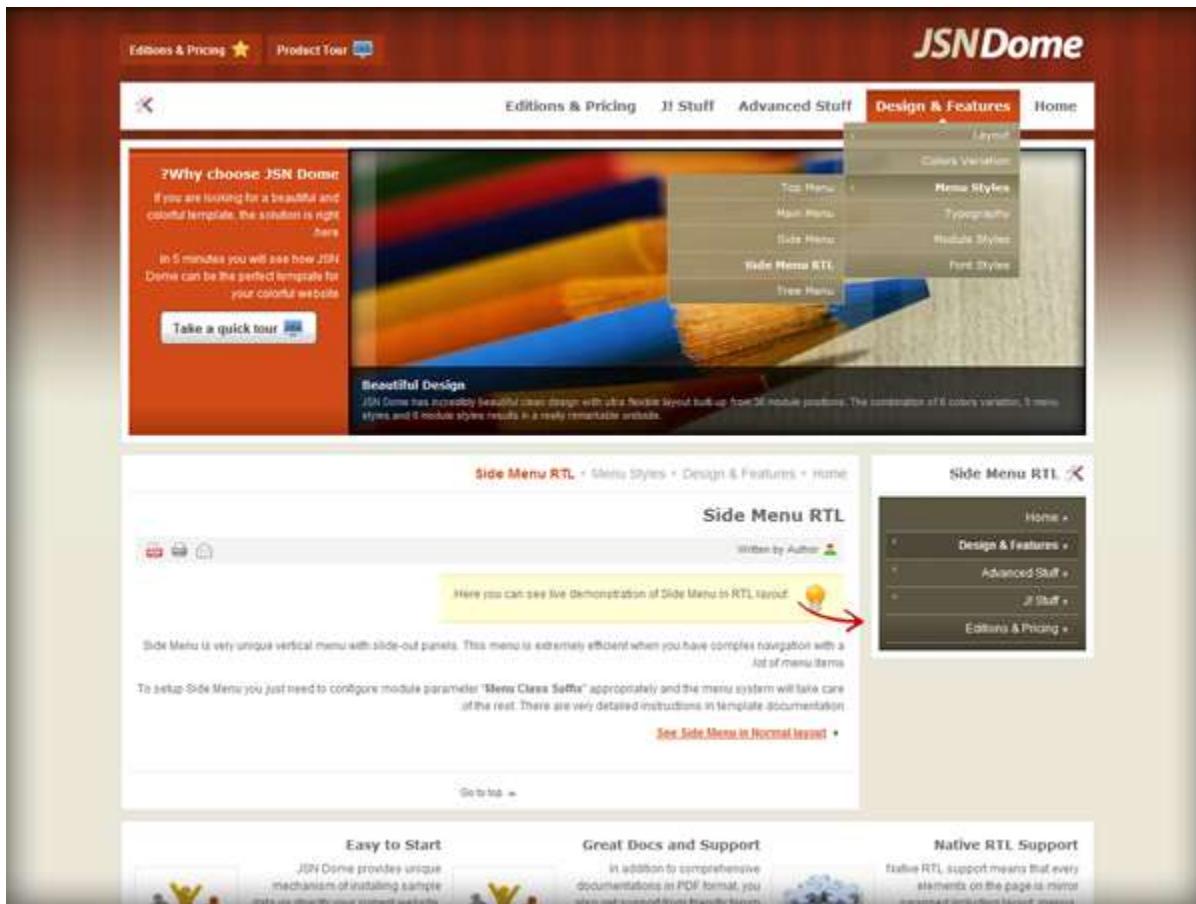

UniIcons attached to list items

Multiple icons, single image

JSON Dome utilizes the image sprite CSS technique to reduce the number of HTTP requests to the server. Technically, all icons are merged in one single image file and visitors will need to make **just one single request/download** to the server to get all icons. If you have some extra time, please read [more about CSS sprites](#).

Native RTL support

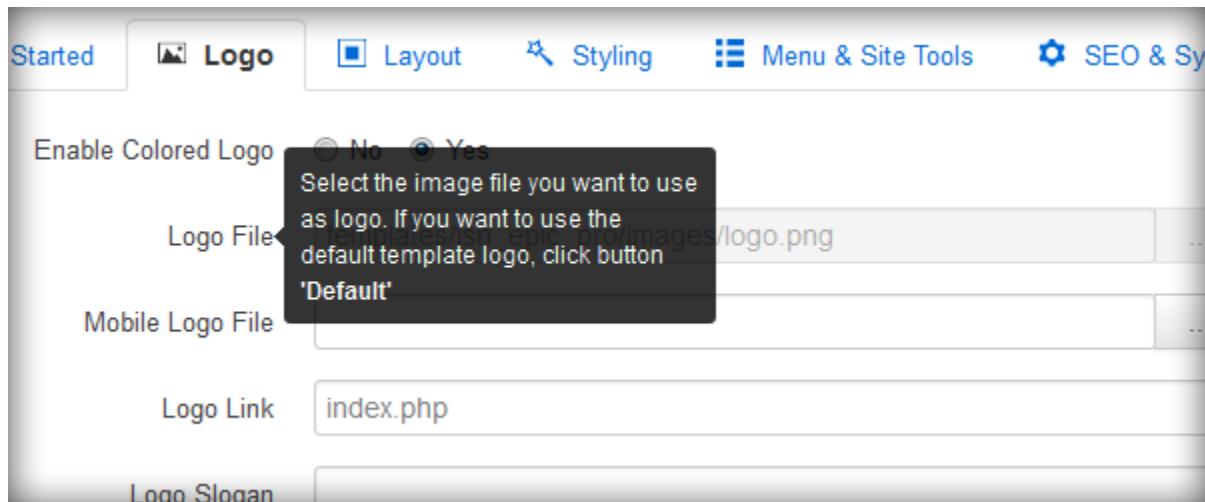

JSON Dome Right To Left layout

All JoomlaShine templates are equipped with **native RTL support**. We spent a huge amount of time tweaking every tiny detail of the template to make it look absolutely awesome in the RTL mode. Everything is horizontally-flipped including the dropdown main menu and side menu.

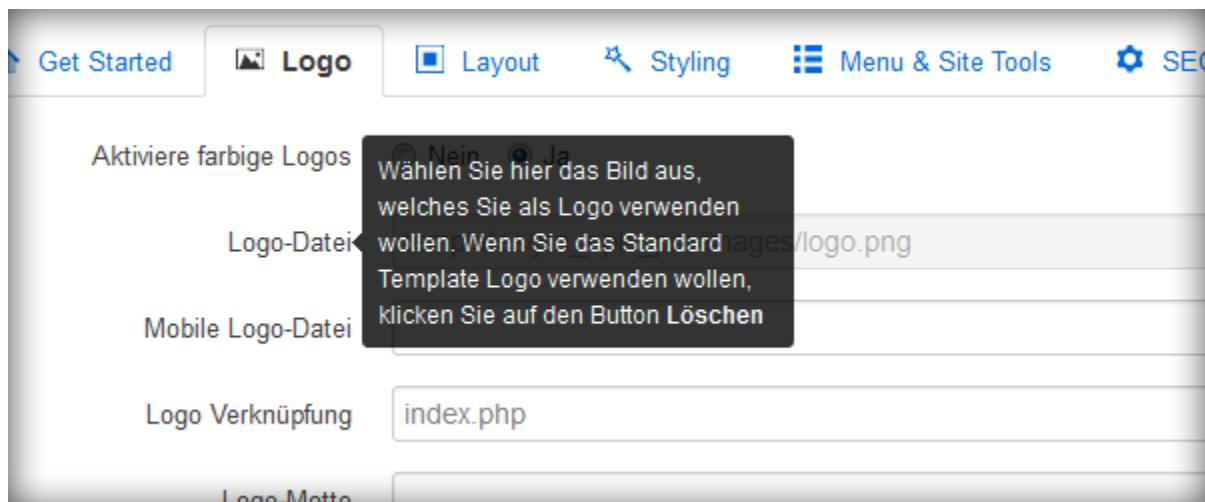

You don't have to do any additional template configuration to enable the RTL mode. Just set some RTL language in Joomla! administration and our template will automatically detect and enable the RTL mode.

Multilingual support

In JoomlaShine.com templates, all the wording of both back-end and front-end are moved to separate language files, so you can easily translate them into any language you want. Currently our templates support **14 primary languages** with more to come in the future.

English language

German language

For more information about supported languages, please read section **Multilingual support** in this document.

Read more: Section Multilingual support

Free Extensions

JSON PowerAdmin – Joomla Admin made easy

JSON PowerAdmin makes your Joomla administration process easy and enjoyable. It allows you to have full control over your Joomla website in a single screen. You can manipulate elements by using an intuitive GUI with drag-n-drop operations.

Main features of JSON PowerAdmin:

- Search any items quickly in back-end with **Spotlight Search**
- Control the website content in one place with **Site Manager**

The screenshot shows the JSON PowerAdmin interface. The top bar has tabs for Site Manager, Site Search, Configuration, and Help. The left sidebar is titled 'MENU' and contains a 'Main Menu' dropdown with items like Home, Design, Features, Joomla!, Ext. Styles, and Get it Now. The 'Home' item is highlighted with a yellow box. A context menu is open over the 'Home' item, with options: Select, Edit, Unpublish, and Rebuild. The right panel is titled 'COMPONENT' and shows a component titled 'Introducing JSON Dome' by Super User. The component content describes the template's features, including its beauty, colorfulness, and various management options.

JSON PowerAdmin is totally FREE!

[VIEW DEMO – DOWNLOAD JSON POWERADMIN](#)

JSN ImageShow – Stunning Joomla gallery

The image gallery you see on our demo website is another cool product **JSN ImageShow** from JoomlaShine.com. This product is shipped with component, module and content plug-in so that you can present a gallery anywhere on every website. The image gallery works normally on desktop and mobile devices.

Presentation as module

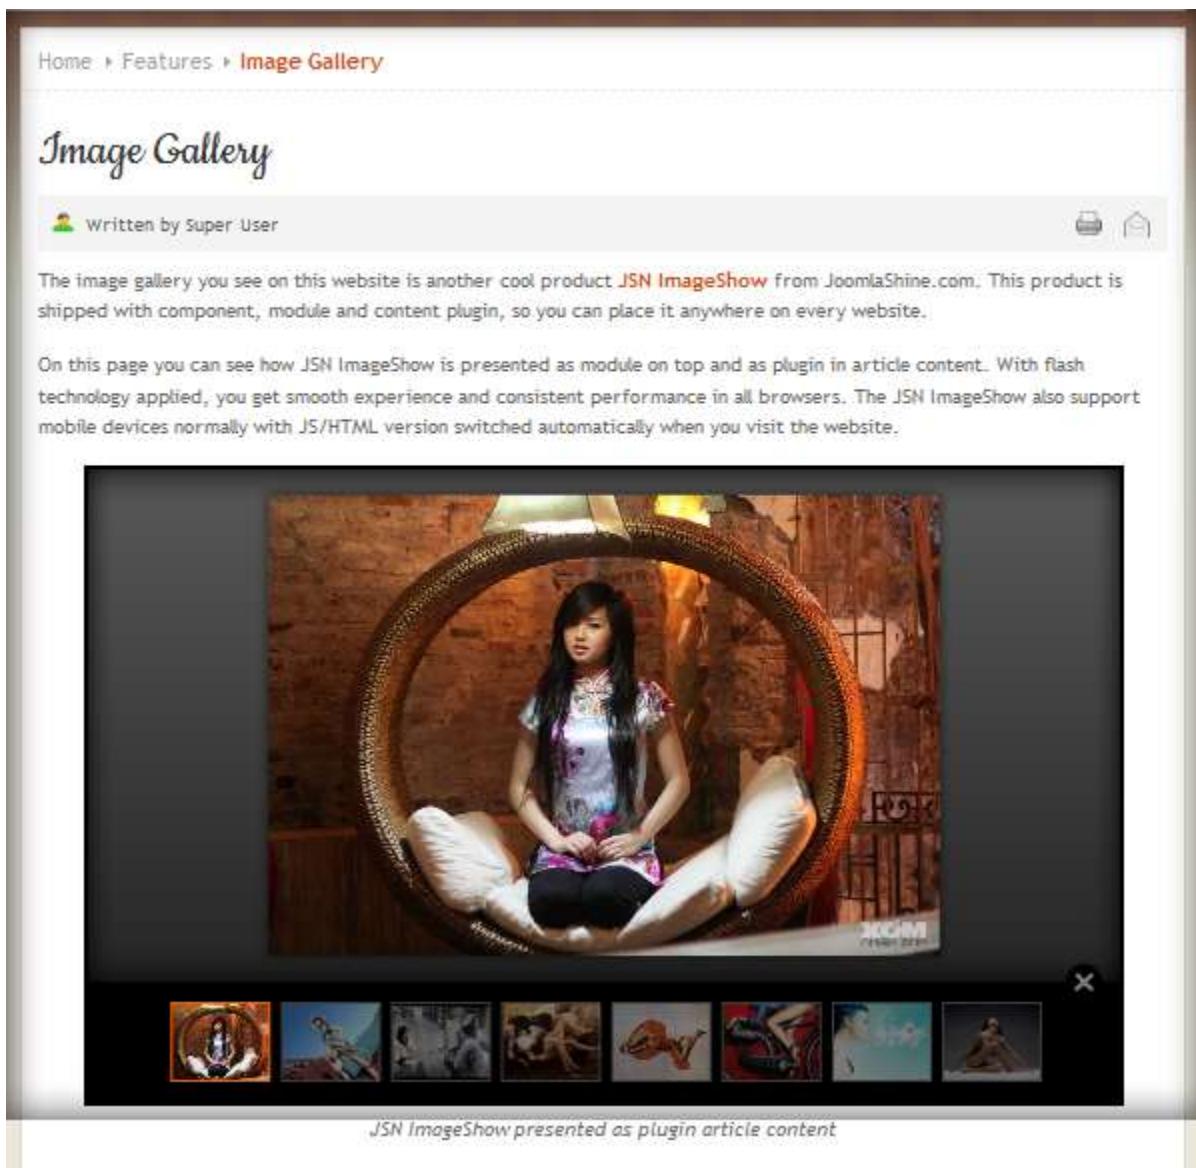

Here you can see how JSN ImageShow is presented as a slideshow module in position **promo**.

JSN ImageShow presented as slideshow module

Presentation as plugin

Here you can see how JSON ImageShow is presented as full featured gallery with thumbnails inside the article.

JSON ImageShow presented as gallery in main body content

JSN ImageShow is NOT included in the template package, but you can download it separately **for free**.

Getting Started

Template installation

After downloading, you should have a template installation file called **jsn_dome_XXX_Z.Z.Z_install.zip**, where:

- **XXX** is the template edition. It can be **free** or **pro**.
- **Z.Z.Z** is the template version.

This is a standard Joomla! template installation file which can be installed in Joomla! administration as usual. Here are quick instructions to remind you:

1. In Joomla! administration, go to menu **Extensions -> Extension Manager**
2. Once you are on **Extension Manager**, click **Browse** button and select template installation file **jsn_dome_XXX_Z.Z.Z_install.zip**. After that, click on button **Upload & Install**.
3. Installation file will be uploaded to your server and installed in Joomla!
4. Set the templates as default, go to menu **Extensions -> Template Manager**

Template Parameters

GETTING STARTED

Step 1. Setup sample data

The best way to understand the template is to setup sample data on your website to make it look the same as template demo website. There are 2 options:

- * [Install Sample Data](#)
Install everything directly on this website. All current data will be lost.
- * [Download QuickStart package](#)
Download the package and process it as standard Joomla website package you downloaded from joomla.org

Step 2. Check documentation

Now, when the sample data installed, it's about time to take a look at template documentation and start exploration. Documentation is provided in both text and video formats:

- * [Watch configuration video](#)
Watch a series of 10+ videos covering all template parameters.
- * [Read documentation](#)
Download and read comprehensive documentation in PDF format. It will show you all the features of the template, not just parameters.

JSN DOME PRO UNLIMITED

Copyright: Copyright (c) 2008 - 2013 - JoomlaShine.com
Integrity: Check for file modification
Version: Framework: 2.0.7 - [The latest version](#).
Template: 4.0.0 - [The latest version](#).

[See other products](#)

Template parameters logically grouped in panels

All JoomlaShine templates can be effortlessly configured by template parameters. In template setting page, there are **nearly 40 template parameters** arranged into logical groups for convenient operation.

To access template setting page, please take the following steps:

1. Go to the template manager by menu **Extensions -> Template Manager**.
2. Click on template name **JSN_Dome_XXX**, where XXX is the template edition you have.
3. Here in the **Template Edit** page, you will see the list of template parameters in section **Parameters**.
4. Click button **Save** to save all changes you've made.

Template Information & Auto Update notification

JSN DOME PRO UNLIMITED

The screenshot shows the product page for 'JSN DOME PRO UNLIMITED'. The page features a large image of colored pencils. Below it, there are three main sections: 'Mobile Ready' (with a note about responsive design), 'Stunning Colors' (with a note about 8 color variations), and 'Native Compatibility' (with a note about being compatible with Joomla 2.5 and 3.0). At the bottom left is a button labeled 'Check for files modification'.

Copyright: Copyright (c) 2008 - 2013 - JoomlaShine.com

Integrity: [Check for files modification](#)

Version: Framework: 2.0.7 - [The latest version](#).
Template: 4.0.0 - [The latest version](#).

[See other products](#)

Social sharing icons for Facebook, Twitter, and YouTube are at the bottom right.

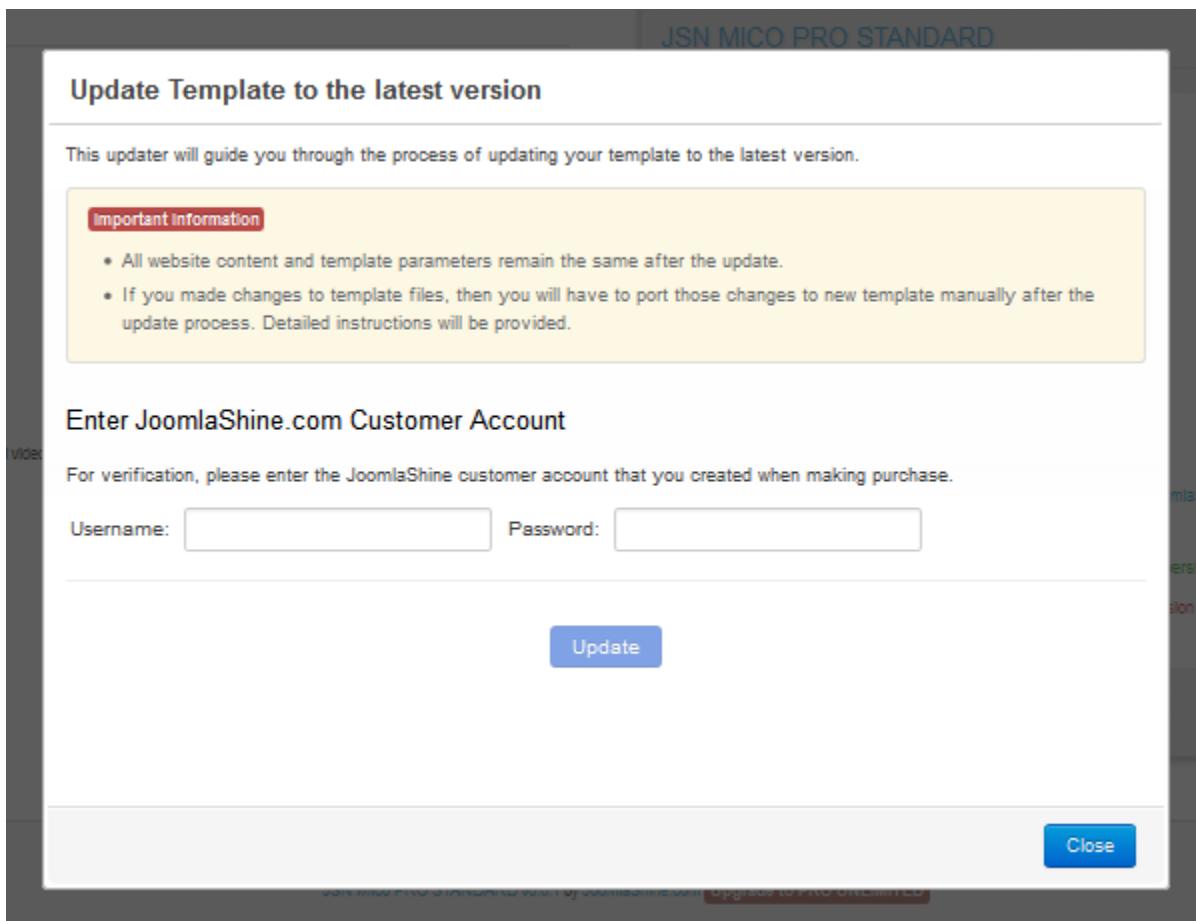

In the first parameter, you can find important information about the latest template version. We really do treat our templates as a piece of software, which needs to be continuously improved. So you should always make sure you are using the latest version.

Also, in this section you can find some other relevant information such as **Author** and **Copyright**.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

JSN Dome automatically checks the latest version available for **template version** and **framework version** to download.

- If you want to update Framework only, click on the button **Update to x.x.x** (x.x.x is the latest version) which is next to the current framework version. After that a new modal window appears on your web browser, you click on the button **Update**, waiting for the update process, then click **Finish**.
- If you want to update both framework and template, click on the button **Update to x.x.x** (x.x.x is the latest version) which is next to the current template version. You fill in the JoomlaShine customer account and click on the button **Update**, waiting for the update process, then click **Finish**.

Update template to the latest version

After that the window about successful upgrade appears in your web browser.

Please note, if you customized the CSS files of original template, the changes would be lost. The best if you do backup the customized CSS files before the upgrade process.

Sample Data Installation

GETTING STARTED

Step 1. Setup sample data

The best way to understand the template is to setup sample data on your website to make it look the same as template demo website. There are 2 options:

- [Install Sample Data](#)

Install everything directly on this website. All current data will be lost.

- [Download QuickStart package](#)

Download the package and process it as standard Joomla website package you downloaded from joomla.org

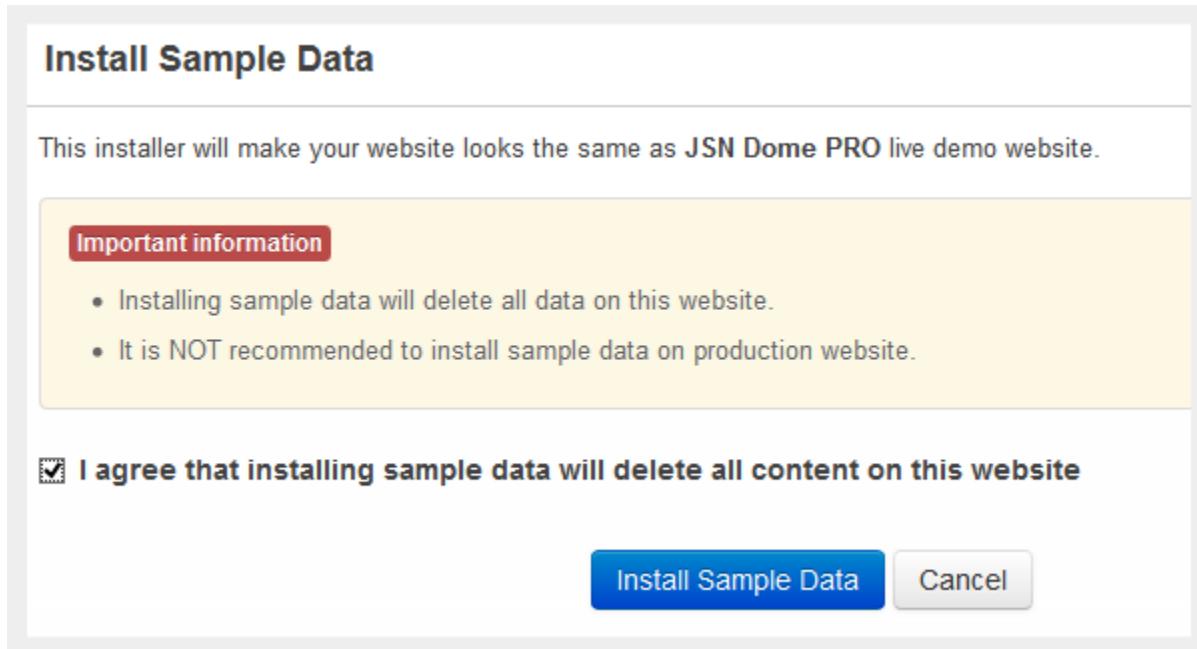

All JoomlaShine templates have unique feature of installing sample data which makes your testing website look the same as on the template demo website. You can choose to install:

- **Sample Data** – A light package with only JSN Dome data. You install it on your available Joomla websites.
- **QuickStart package** – It contains both the latest Joomla installation file and JSN Dome data. You install this package normally as the flow to install Joomla. After that, you will get a totally new Joomla website with JSN Dome template and its sample data.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Below is the instruction to install **Sample Data package**:

1. First, go to the template settings page, at the parameter **GETTING START**, click **Install sample data** button.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

2. Next, on page **Sample Data Installation** follow on-screen instruction to start the process.

- **Download sample data package** of the demo website data such as: demo articles, demo menus, demo template settings, etc.
- **Install free extensions:** JSON ImageShow, JSON PowerAdmin and JSON UniForm. You can install them or not.
- **Install sample data:** this step will check the template version before installing the sample data.

The screenshot shows a 'Install Sample Data' page with the following content:

There are several stages involved in the process. Please be patient.

- Download sample data package ✓
- For the best experience, it's strongly recommended for you to install following free extensions.
 - JSON ImageShow + **Update**
 - JSON Extension Framework **Update**
 - JSON ImageShow Theme Classic **Update**
 - JSON ImageShow Theme Slider **Update**
 - JSON ImageShow Theme Grid **Update**
 - JSON ImageShow Theme Carousel **New Installation**
 - JSON ImageShow Theme Stip **New Installation**
 - JSON ImageShow Theme Flow **New Installation**
 - JSON PowerAdmin + **New Installation**
 - JSON Extension Framework **Update**
 - JSON Uniform + **Update**
 - JSON Extension Framework **Update**

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

3. Finally, you should click the **Finish** button to return to **Template settings page** for further configuration.

The screenshot shows a configuration step titled "Install Sample Data". It contains a list of tasks with green checkmarks indicating they have been completed. The tasks include downloading a sample data package, installing extensions like JSN ImageShow, JSN Extension Framework, JSN PowerAdmin, and JSN Uniform, and finally installing sample data. A success message at the bottom states "Sample data is successfully installed".

Install Sample Data

There are several stages involved in the process. Please be patient.

- Download sample data package ✓
- For the best experience, it's strongly recommended for you to install following free extensions.
 - JSN ImageShow ✓
 - JSN Extension Framework ✓
 - JSN ImageShow Theme Classic ✓
 - JSN ImageShow Theme Slider ✓
 - JSN ImageShow Theme Grid ✓
 - JSN ImageShow Theme Carousel ✓
 - JSN ImageShow Theme Stip ✓
 - JSN ImageShow Theme Flow ✓
 - JSN PowerAdmin ✓
 - JSN Extension Framework ✓
 - JSN Uniform ✓
 - JSN Extension Framework ✓
- Install sample data. ✓

Sample data is successfully installed

Original data restoration

Before the sample data installation process, all original data of your website is automatically backed up into a backup file located in folder **/backup** inside the **joomla_root_folder/templates/json_dome_XXX/**, where **XXX** is the template edition on your server. Technically, this is the zip file which contains a plain text file with SQL instructions that need to be executed on your Joomla! database.

Below are the instructions on how to do that by using software phpMyAdmin 3.2.1.

1. First, login to phpMyAdmin and select your Joomla! database on the left column

The screenshot shows the phpMyAdmin interface with the following details:

- Server:** localhost
- Databases:** Databases list includes: cdcol (1), information_schema (28), jsn-blank-15 (44), jsn-blank-16 (41), jsn-dome-15 (36), jsn-dome-16 (65), jsn-dome-17 (34), jsn-epic-15 (57), jsn-epic-16 (58), **jsn-epic-17 (54)** (highlighted with a red box), jsn-teki-15 (44), jsn-teki-17 (42), jsn-tendo-15 (44), jsn-tendo-16 (41), jsn-tendo-17 (34), mysql (23), test, webauth (1).
- Actions:** Create new database, MySQL connection collation: utf8_general_ci.
- Interface:** Language: English, Theme / Style: Original, Custom color: Reset, Font size: 82%.

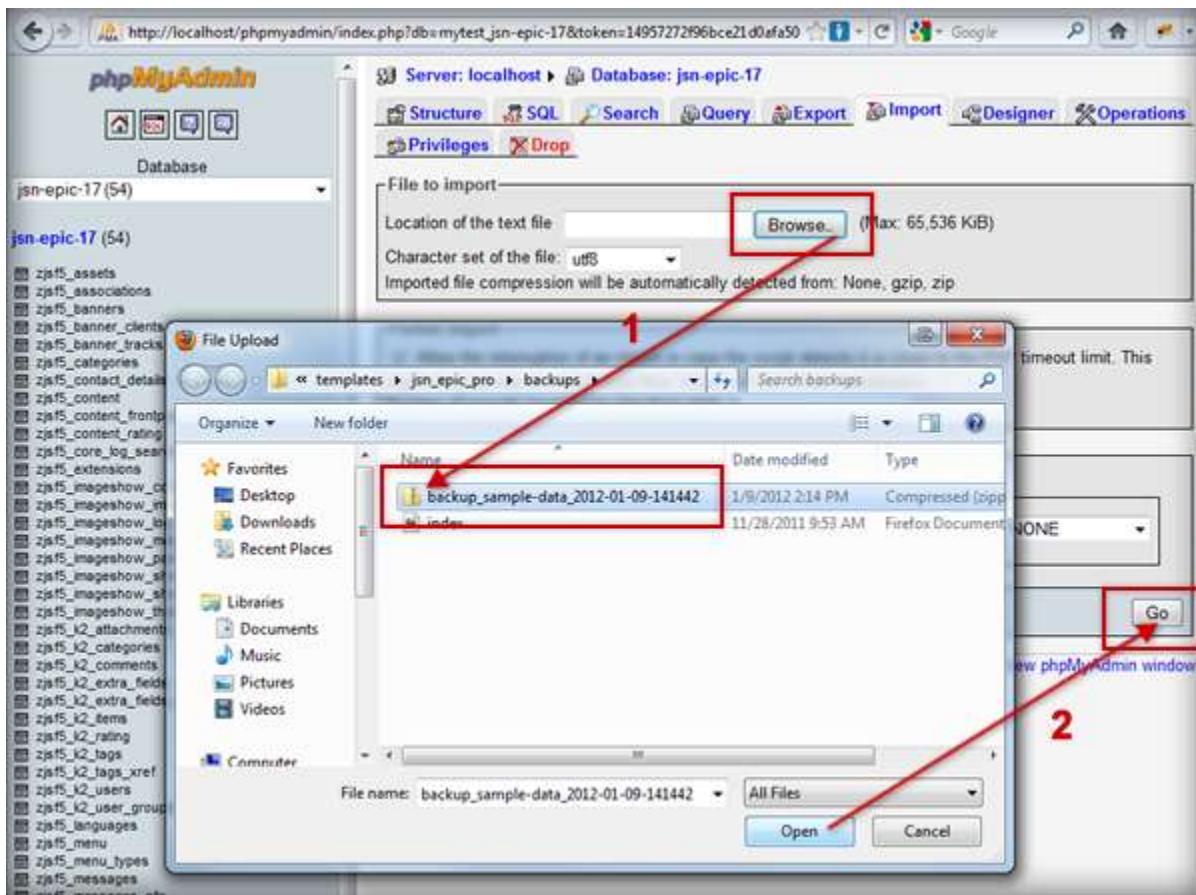

2. Next, select tab **Import** on the horizontal menu bar

The screenshot shows the phpMyAdmin interface with the following details:

- Server:** localhost, **Database:** jsn-epic-17
- Import Tab:** Selected (highlighted with a red box).
- File to import:**
 - Location of the text file: (Max: 65,536 KiB)
 - Character set of the file: utf8
 - Imported file compression will be automatically detected from: None, gzip, zip
- Partial import:**
 - Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. This might be good way to import large files, however it can break transactions.
 - Number of records (queries) to skip from start: 0
- Format of imported file:**
 - DocSQL
 - SQL
 - Options: SQL compatibility mode:

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

3. Next, click button **Browse..**, then select the backup zip file and click button **Go** at the right corner of the page.

After script execution, you can get back to your website to check how the original data was restored.

▶ Video tutorial

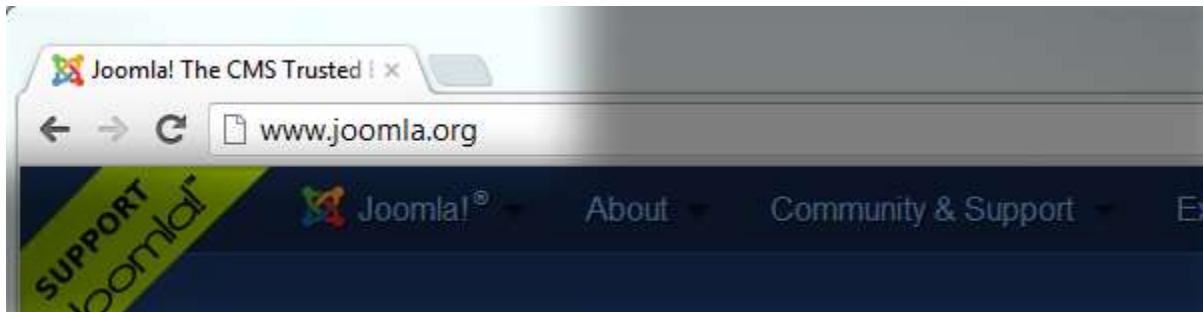

It guides you how to install a JSON template and sample data visually. Here are [video tutorials](#).

JSON Epic in the video is an example and these instructions can be applied to **JSON** template as well.

Favicon configuration

Favicon is a small icon positioned on the left of the address bar of your browser. By default, Joomla! has an icon as shown on the screenshot below.

Default Joomla! favicon

On your website, you might want to use your own icon, like the one we are using on our site joomlashine.com.

JoomlaShine favicon

Here are instructions on how to do that:

Step 1: Create your own favicon file

Technically, favicon is a regular **16px * 16px** icon file with exact name **favicon.ico**. In most cases, favicon is the sized-down version of the company logo saved in the icon format. In some cases, the logo is too specific and favicon needs to be built from scratch.

You can use some professional icon editor software like [Axialis IconWorkshop](#) and [Iconcool Editor](#) or to use [online favicon generators](#). The first method gives you better quality, but takes more effort. The second method is easier, but the quality is not the best.

Step 2: Upload favicon file to your server

After you got the favicon file, it's time to upload it to your server. You need to upload the icon file to template folder overwriting the default file. This is the folder **joomla_root_folder/templates/jsn_dome_XXX/**, where **XXX** is the template edition.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

If you have permission problems while using FTP, then we strongly recommend you use a great Joomla! extension called [**eXplorer**](#). And you don't need to declare logo width/height anywhere. Template will automatically present it as it is.

If you don't see your new icon, that doesn't necessarily mean you did anything wrong. Browsers are designed to minimize data traffic, so they don't refresh the favicon every time they show a page. Even refreshing the page (**F5**) won't help. So you need to refresh more thoroughly:

- **Mozilla / Firefox / Safari**: hold down Shift while clicking Reload, or press Ctrl-Shift-R (Cmd-Shift-R on Apple Mac)
- **Internet Explorer**: hold Ctrl while clicking Refresh, or press Ctrl-F5
- **Konqueror**: simply click the Reload button, or press F5
- **Opera**: users may need to completely clear their cache in **Tools -> Preferences**
- **Chrome**: Shift-F5

If this doesn't work, you will need to delete the temporary internet files and history and then open your page again.

Logo

The logo **JSON Dome** is the default sample logo and you should replace it with your own. Technically, logo is an image file called **logo.png** located in folder **joomla_root_folder/templates/json_dome_XXX/images/color/YYY/**, where **XXX** the template edition you have, **YYY** is the color you are using.

You can manually choose your own logo file via template parameter **Logo File**. Additionally, you don't need to declare logo width/height anywhere. Template will automatically present it as it is.

A screenshot of the Joomla Template Manager under the "Edit Style" section for the "JSON Dome PRO - Default" style. The "Template" is set to "json_dome_pro". The "Logo" tab is selected. The "Enable Colored Logo" option is set to "Yes". The "Logo File" is set to "templates/json_dome_pro/images/logo.png". The "Mobile Logo File" field is empty. The "Logo Link" is set to "index.php". The "Logo Slogan" field is empty. Below the form, the text "Parameters to set logo" is displayed.

Parameters to set logo

When the logo file is ready, you can set up the following parameters:

- **Logo File** – Select the image file you want to use as logo.
- **Mobile Logo File** – Set specific logo for your website on mobile devices. Please leave this parameter empty if on mobile, you want to use the re-sized logo which is used on the desktop already.
- **Logo Link** – Set URL where the logo image should link to. You can set here:
 1. Absolute link like <http://www.joomlashine.com>
 2. Relative link starting from Joomla! root folder like **index.php**

Leave this parameter empty if you do NOT want your logo to be clickable at all.

- **Logo Slogan** – Set the slogan text to be inserted to the logo image attribute **alt**. Text in **alt** attribute is visible to screen readers (good for accessibility) and search engines (good for SEO).
- **Enable Colored Logo** – Define if you want to use special colored logo for each template color. Colored logo file is located under folder **images/colors/{color_name}/ inside the template folder**.

Set up rich-media logo via module in position “logo”

JSON Dome provides a module position called **logo**, where you can put any Custom HTML module with rich-media logo. Another advantage is that you can create multiple modules with different logos and display them in various pages using the menu-module assignment feature in Joomla!.

Attention!

If template detects that there are some module presented in position **logo**, then it will disable default logo with all logo parameters: **Enable Colored Logo**, **Logo Link** and **Logo Slogan**.

▶ Video tutorial

It guides you how to configure logo visually. Here are [video tutorials](#).

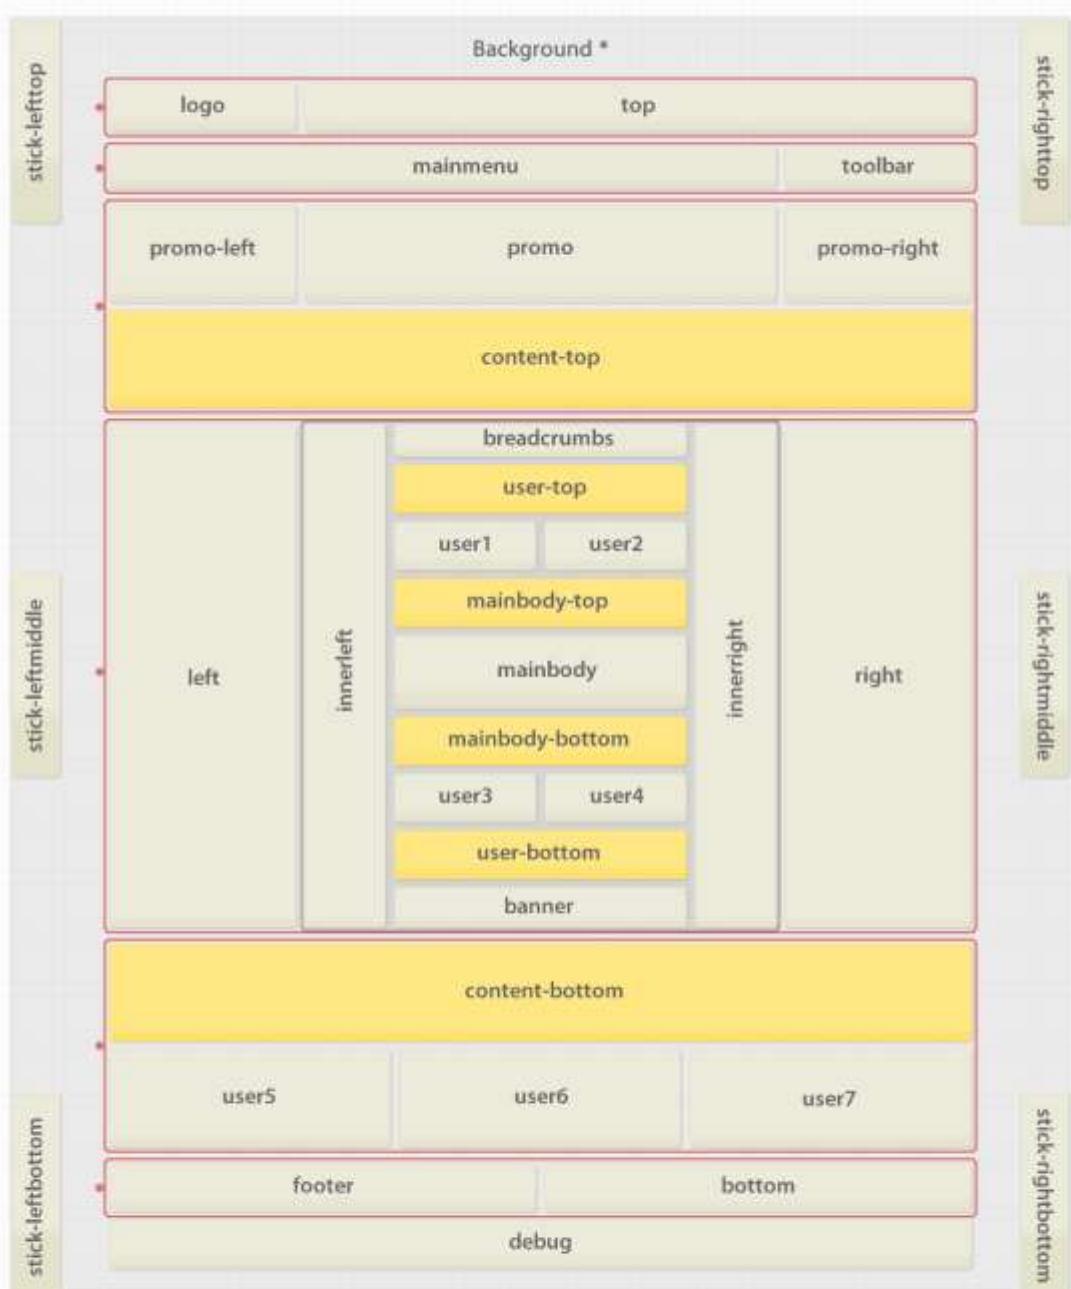

JSON Epic in the video is an example and these instructions can be applied to **JSON** template as well.

Layout

Module positions

JSON Dome provides **37+ module positions** allowing you to have multiple layout configurations. All module positions are collapsible which means if you don't use all the positions they will be left as blank for neighboring modules.

JOOMLASHINE TEMPLATE FULL LAYOUT

Position with modules arranged in
vertical layout

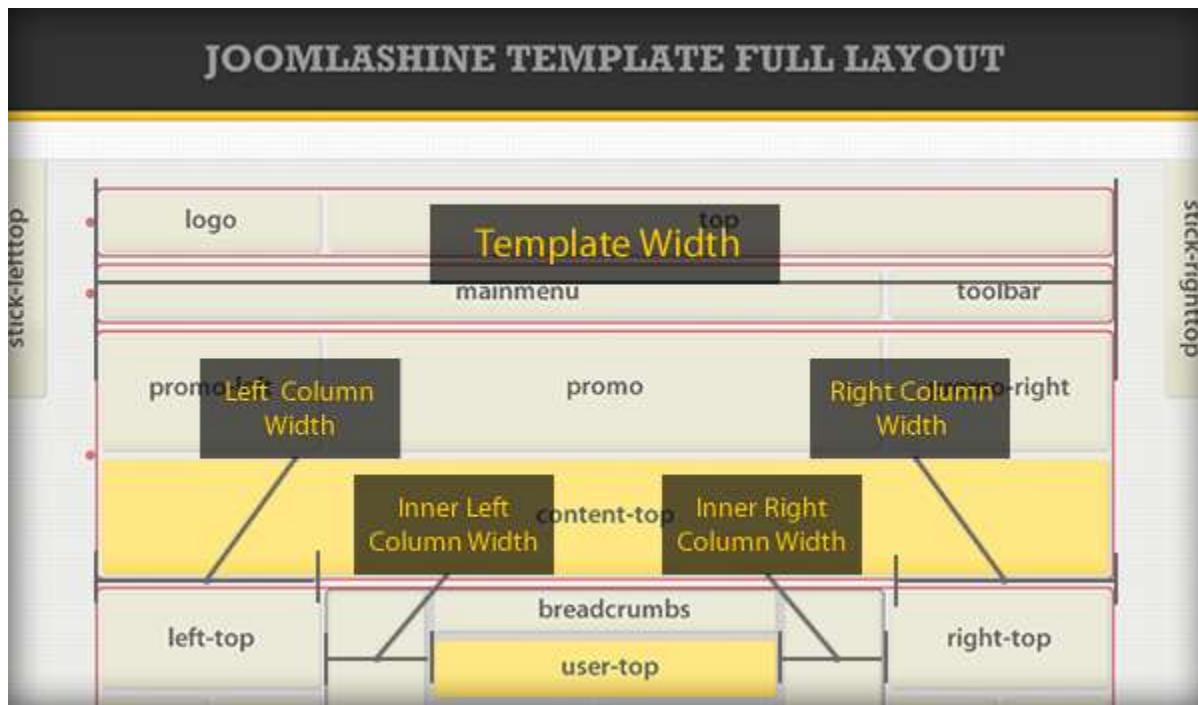

100%
100%
100%

Position with modules arranged in
horizontal layout

33%
33%
33%

(*) The background is set as a module position for easy customization

Layout dimensions

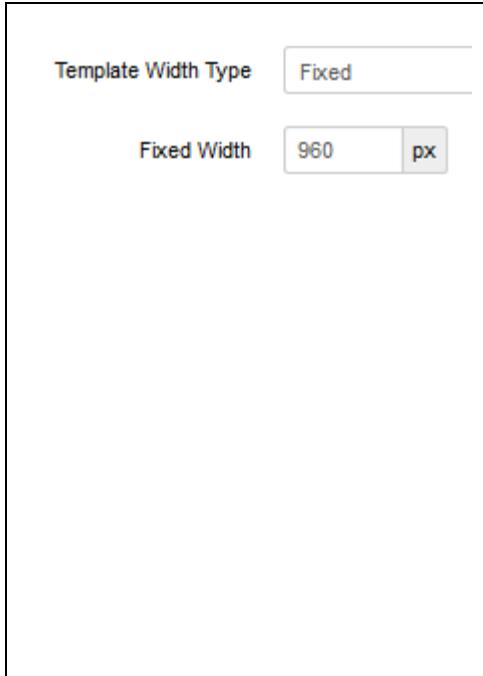

JSON Dome allows you to change the width size of several critical layout elements. All settings can be done via template parameters in the section **LAYOUT SETTINGS**.

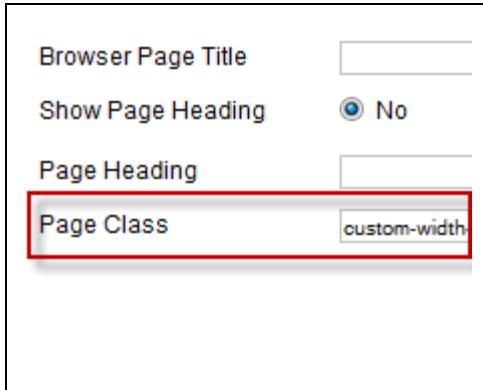

Template Width

Template width can be configured in three different ways.

Configuration by template parameter (lowest priority)

	<p>Template width can be set by template parameter Template Width Type. There are three options for you to choose:</p> <ul style="list-style-type: none">• Fixed – Template width is fixed in pixels defined in parameter Fixed Width (px).• Float - Template width is fixed in percentage defined in parameter Float Width (%).• Responsive - Template width fits into different resolution:<ul style="list-style-type: none">• Mobile Device: Template width fits into mobile devices - tablets and smartphones.• Wide Desktop: Template width fits into desktop with width display 1200 px and higher. <p>This is the default setting and has the lowest priority.</p>
---	--

Configuration by "Page Class" (higher priority)

	<p>Template width can be set by Page Class of a menu item with syntax custom-width-xxx, where xxx is the width value you choose.</p> <p>There are the following possible values: fixed, float and responsive. For example:</p> <ul style="list-style-type: none">• custom-width-fixed <p>This setting will override the default settings by template parameter <i>Template Width</i>.</p>
--	--

Columns Width and Position

Thanks to the Bootstrap grid system, the layout is divided into 12 equal columns. Each position of horizontal layout should take the width equal the columns number. You can drag and drop module positions to adjust width or change positions.

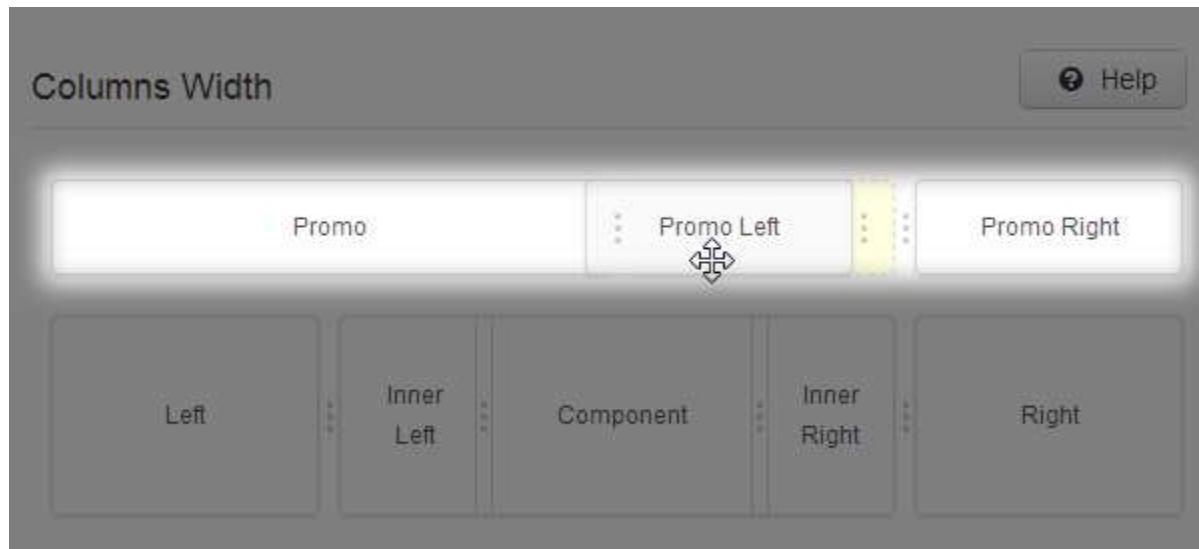

Visual column widths and positions

12 Bootstrap grids

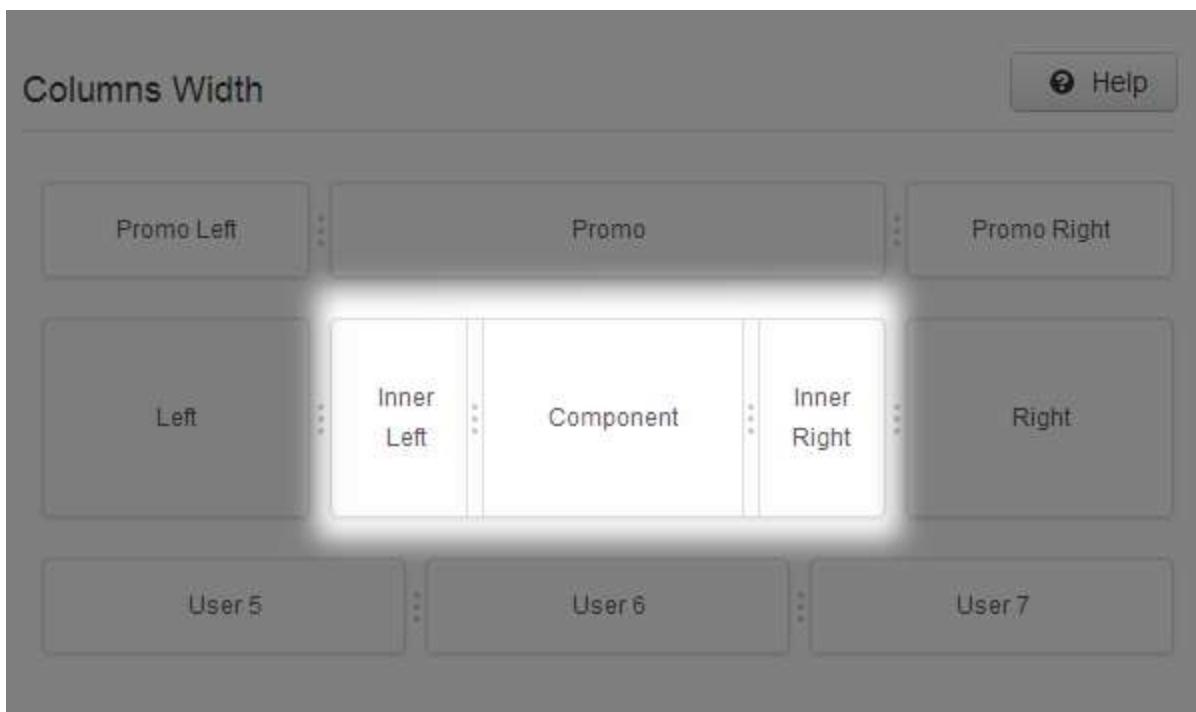

Columns width adjustment

Columns position change

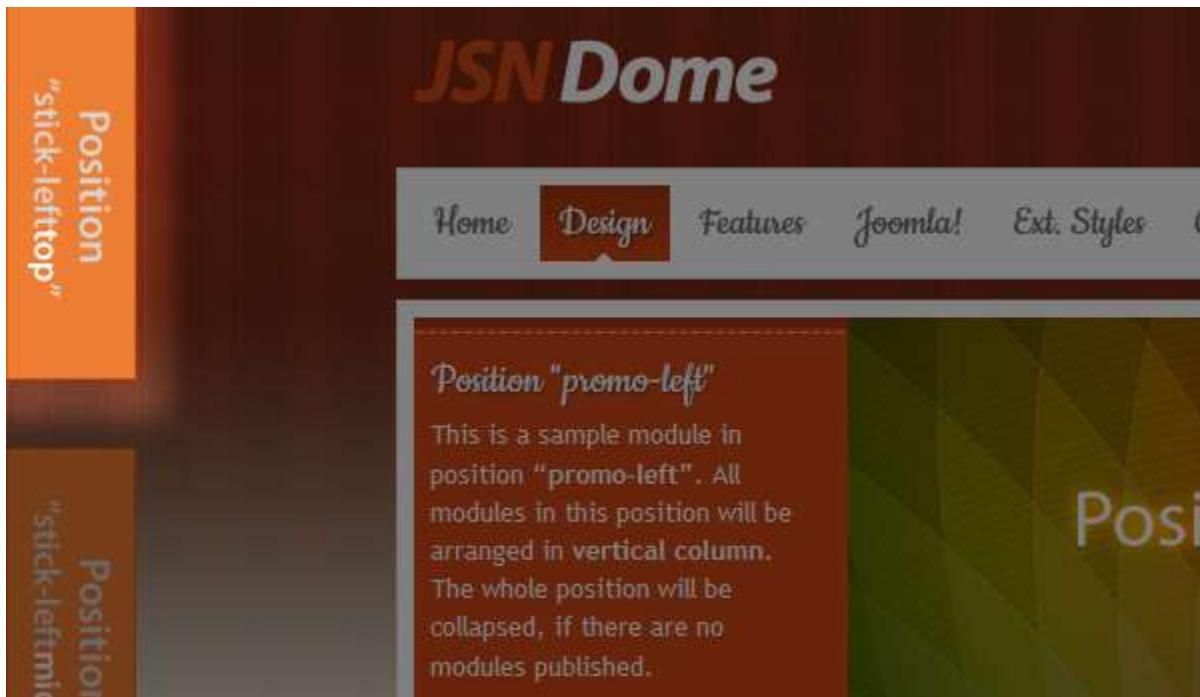

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Please be aware that, you can adjust all the column widths and change almost all column positions. However, you are not allowed to change the positions of separate elements in the center block of “Inner Left”, “Component” and “Inner Right”.

The center block “Inner Left”, “Component” and “Inner Right”

Stick Positions

The template layout includes 6 stick positions: **stick-lefttop**, **stick-leftmiddle**, **stick-leftbottom**, **stick-righttop**, **stick-rightmiddle**, and **stick-rightbottom**. You can assign any modules or create custom HTML module into mentioned positions for better website presentation. The module “sticks” into your layout, so when you scroll mouse up and down, the assigned module is moved in appropriate direction.

Let's see how we can create a custom HTML module then place it in the stick-lefttop position.

1. In Joomla Administration you go to **Extensions -> Module Manager**
2. Click on a button **New** then choose **Custom HTML**
3. Fill the settings:
 - **Title:** My stick module
 - **Show Title:** No
 - **Published:** Published
 - **Position:** stick-lefttop
 - **Customer Output:** Type HTML code into this field

Above, we created a new module then assigned to the position stick-lefttop. You can assign a module to the rest 5 stick positions: **stick-leftmiddle**, **stick-leftbottom**, **stick-righttop**, **stick-rightmiddle**, **stick-rightbottom**.

Video tutorial

It guides you how to configure layout visually. Here are [video tutorials](#).

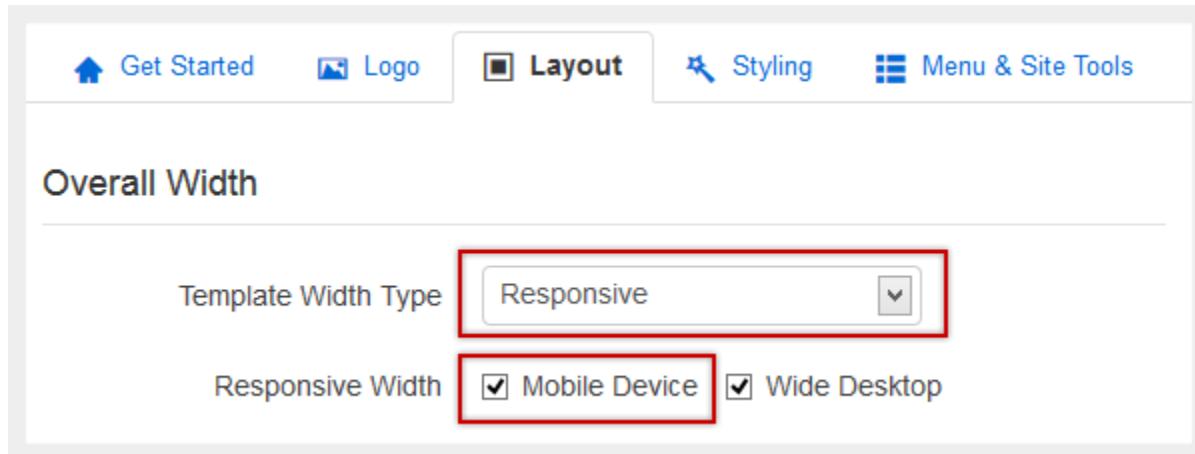

JSON Epic in the video is an example and these instructions can be applied to **JSON** template as well.

Mobile settings PRO

All JoomlaShine templates are equipped with responsive design feature making your website look beautiful in both smartphones and tablets.

Enable Mobile Support

To enable responsive design with mobile please set the parameter **Template width type** as **Responsive** and choose **Mobile Device** in parameter **Responsive Width**.

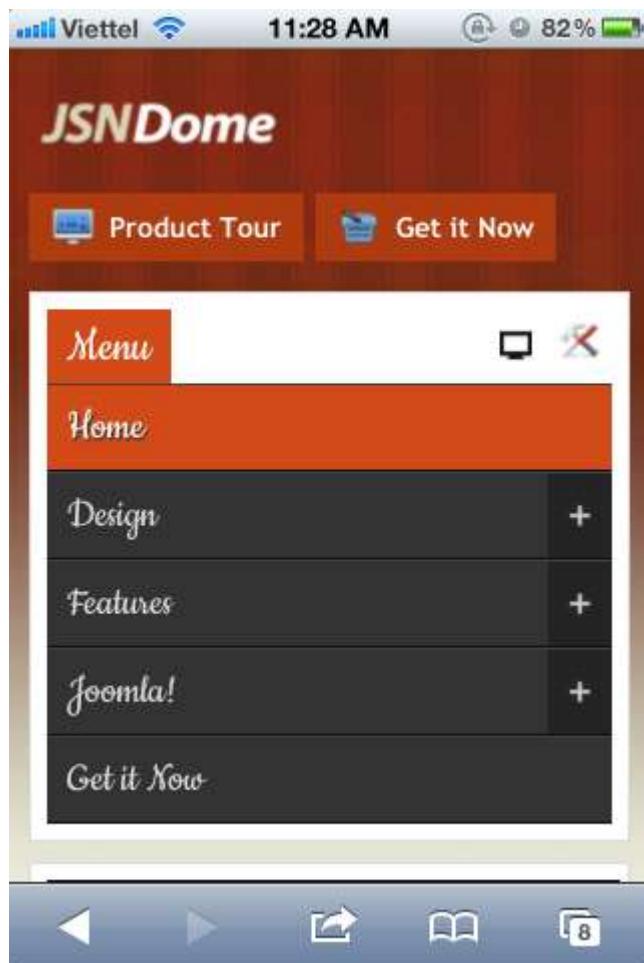

Mobile settings

After that all modules will be automatically rearranged to fit different screen resolutions.

- If the client device is a smartphone like iPhone or Android-based phone, all content will be arranged in one column.
- If the client device is a tablet like iPad, Kindle Fire, etc. all content will be arranged in two or three columns.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Also, main menu will be transformed into compact dropdown menu.

Opened mobile menu

1-column module

As default, all modules will be displayed on both desktop and mobile. To display a module on only desktop or on only mobile, add **Module Class Suffix** parameter as following:

- Display a module on only desktop: **display-desktop**

► Basic Options

▼ Advanced Options

Alternative Layout	Default
Module Class Suffix	<input type="text" value="display-desktop"/> display-desktop
Caching	Use Global
Cache Time	900

- Display a module on only mobile: **display-mobile**

► Basic Options

▼ Advanced Options

Alternative Layout	Default
Module Class Suffix	<input type="text" value="display-mobile"/> display-mobile
Caching	Use Global
Cache Time	900

- Display a module on only mobile: **display-tablet**

► Basic Options

▼ Advanced Options

Alternative Layout	Default

▼ Advanced Options

Alternative Layout	Default
Module Class Suffix	<input type="text" value="display-smartphone"/> display-smartphone
Caching	Use Global
Cache Time	900

Enable Mobile Menu Sticky

With **Mobile Menu Sticky**, the menu will appear anytime. This will help you control all menus easily.

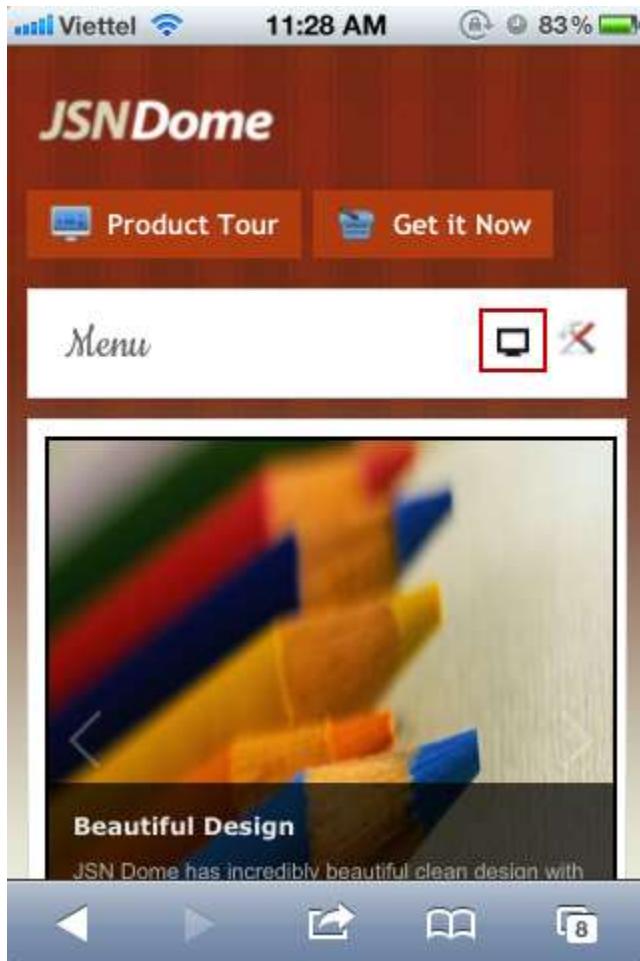

To enable this feature, in the section **Menu & Site Tools ->** parameter **Enable Sticky Menu ->** choose the option **Mobile**.

Enable Mobile Menu Sticky

Show Desktop Switcher

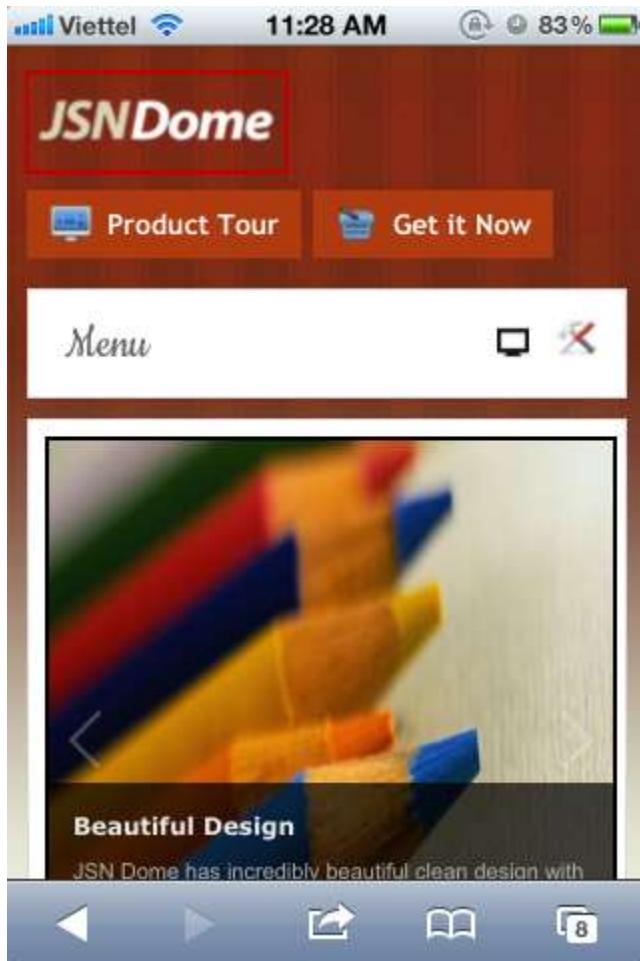

By using parameter **Show Desktop Switcher** in the section **Layout** you can configure to show button to allow your website visitor to jump back to desktop layout.

Desktop Switcher

Mobile Logo File

Normally, the default logo will be automatically resized and displayed nicely in mobile layout. But if you want to have specifically designed logo, then you can select it in the section **Logo** -> parameter **Mobile Logo File**.

Mobile Logo File

Colors Variation

Template Color **PRO**

JSON Dome provides **six major color variations** for you to choose from. Each color variation covers not only the main background, but also fills drop-down menu, links, table's header and some others.

All available colors are described below.

Orange

Red

Cyan

Green

Yellow

Pink

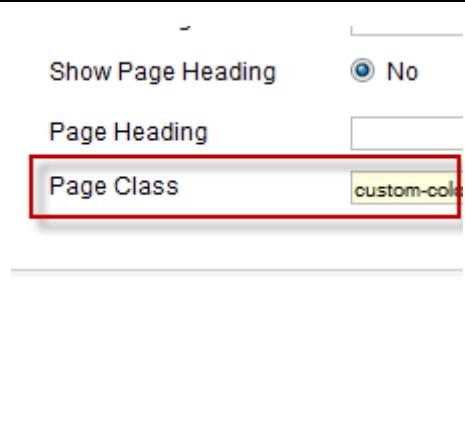

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Template color can be configured in three different ways.

Configuration by template parameter (lowest priority)

	<p>Template color can be set by template parameter Template Color in Styling section.</p> <p>This is the default setting and has the lowest priority.</p>
--	---

Configuration by "Page Class" (higher priority)

	<p>Template color can be set by Page Class of a menu item with syntax custom-color-xxx, where xxx is the color you want to have.</p> <p>There are the following possible values: blue, red, green, orange, grey and violet.</p> <p>For example:</p> <ul style="list-style-type: none">• custom-color-red <p>This setting will override the default settings by template parameter <i>Template Color</i>.</p>
---	--

Configuration by Site tools panel (top priority)

	<p>Template color can be selected by Color Selector from Site tools.</p> <p>This setting is considered as the visitor's preference and has top priority. It will overwrite both <i>Page Class</i> and default settings of parameter <i>Template Color</i>.</p>
--	--

▶ Video tutorial

It guides you how to configure colors visually. Here are [video tutorials](#).

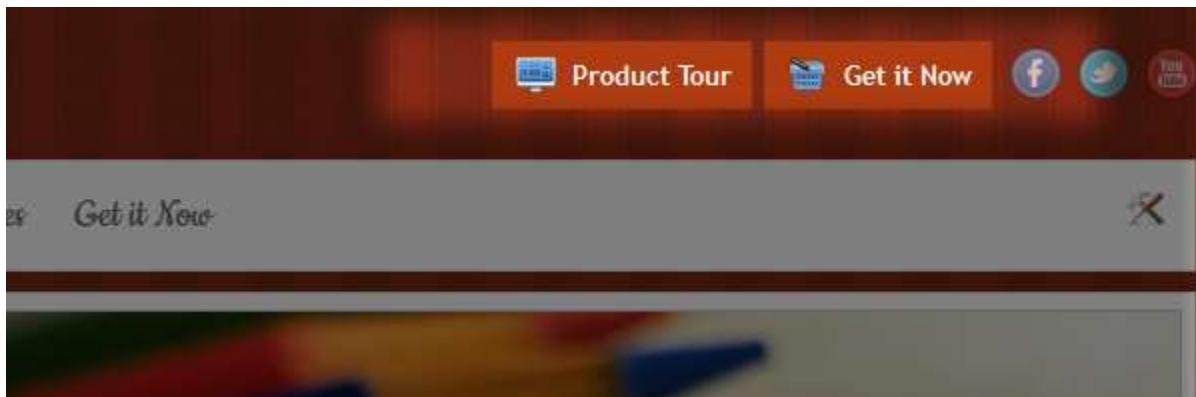

JSON Epic in the video is an example and these instructions can be applied to **JSON** template as well.

Menu Styles

JSON Dome provides **five menu styles** to present your website navigation. The default Joomla! built-in menu module (**mod_mainmenu**) is utilized, so you don't need to install any external menu modules.

Top Menu

The Top Menu allows you to arrange menu items in horizontal lines and assign icons to them. All icons are configured directly in the menu item settings page which is very convenient.

To set up Top Menu please select the menu module you want to use and set up parameters as follows:

- Title: **Top Menu** (*or any other you like*)
- Show title: **Hide**
- Position: **top**
- Access: **public**
- Language: **All**
- Select Menu: **Top Menu** (*you might want to use another sources here*)
- Start Level: **1**
- End Level: **2**
- Show sub-menu items: **No**

Menu Class Suffix: **menu-topmenu menu-iconmenu** (*Please only use "menu-iconmenu" if you want to display icons*)

Attention!

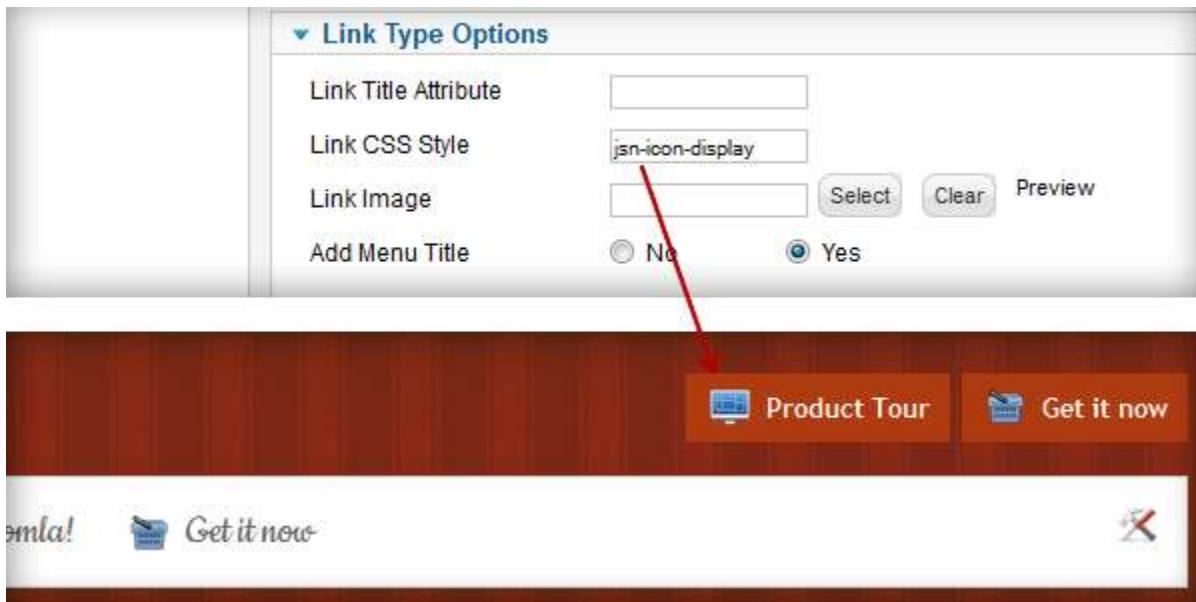

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

Top Menu icons PRO

You can attach any of the **UniIcons** to top menu items to make them more appealing. **UniIcons** is the set of **20 predefined icons** that can be used for multiple purposes. For more information about the available icons and their names, please read section **UniIcons** of this document.

To set up icons, you need to go to menu item settings and do take the following steps:

Add symbol combination **jsn-icon-xxx** to menu item's parameter **Link CSS Style**, where **xxx** is the icon name.

Main Menu

Main Menu is very a powerful menu built with clean accessible XHTML code structure and effective drop-down submenu panels.

To set up Main Menu please select the menu module you want to use and set up parameters as follows:

- Title: **Main Menu** (*or any other you like*)
- Show title: **Hide**
- Position: **mainmenu**
- Access: **public**
- Language: **All**
- Select Menu: **Main Menu** (*you might want to use another menu source here*)
- Start Level: **1**
- End Level: **All**
- Show Sub-menu Items: **Yes**

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

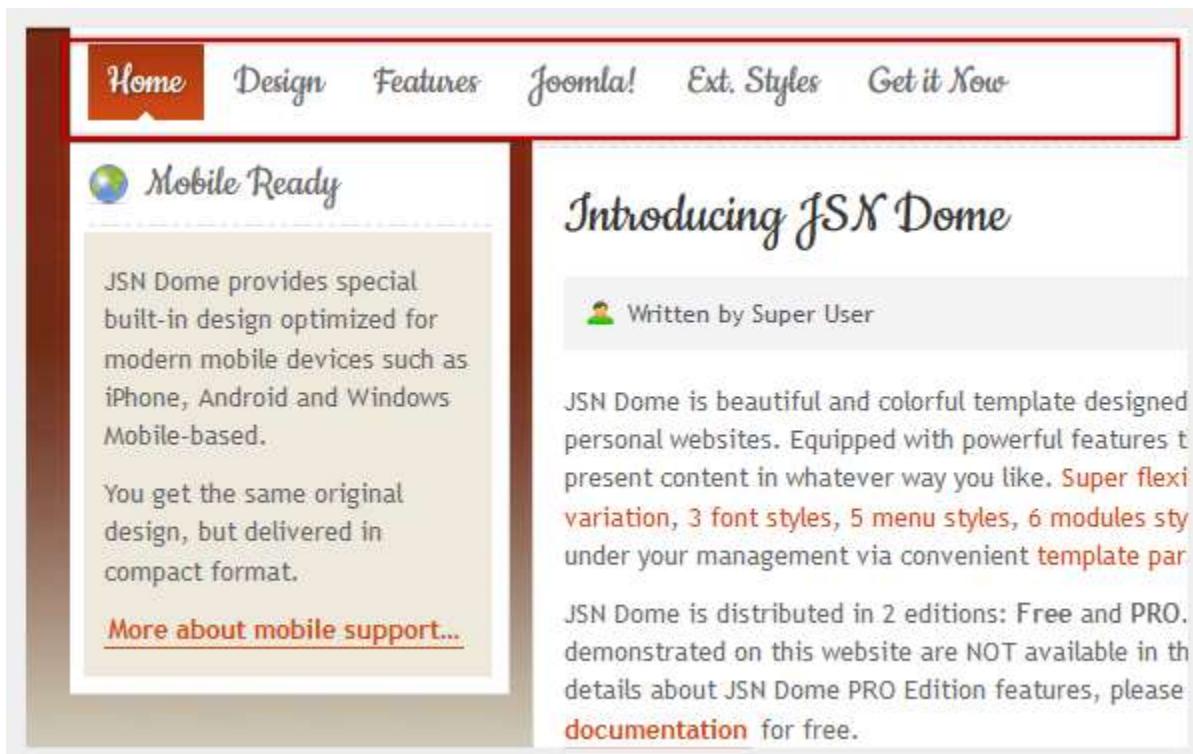

Menu Class Suffix: **menu-mainmenu** **menu-iconmenu** **menu-richmenu** (*Please only use “menu-iconmenu” if you want to display icons and use “menu-richmenu” if you want to display rich text*)

Attention!

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

Sticky Desktop Menu **PRO**

With **Sticky Desktop Menu**, the main menu will always appear at the top – even when you scroll the web page down. To enable this feature, you tick the box **Desktop** in the parameter **Enable Sticky Menu**.

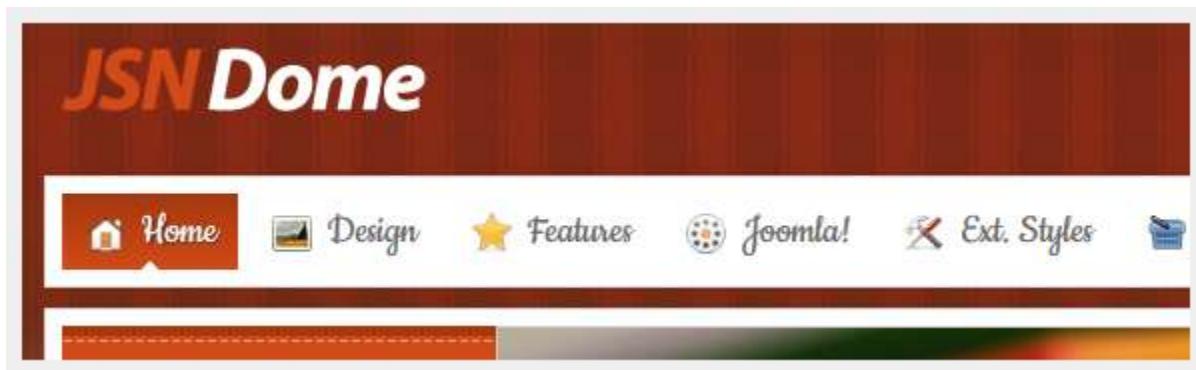

The Sticky Desktop Menu

A screenshot of the JSN Dome configuration panel. At the top, it shows the style as "JSN Dome PRO - Default" and the template as "jsn_dome_pro". Below this is a navigation bar with links for Get Started, Logo, Layout, Styling, and Menu & Site Tools. The "Menu & Site Tools" link is highlighted. The main area is titled "Menu" and contains settings for Main Menu Panel Width (set to 200 px) and Side Menu Panel Width (set to 200 px). There is also a section for "Enable Sticky Menu" with checkboxes for "Mobile" (unchecked) and "Desktop" (checked). A red box surrounds the "Desktop" checkbox.

The Sticky Desktop Menu setting

Main Menu Icons PRO

You can attach any of the **UniIcons** to menu items to make them more appealing.

To set up icons, you need to go to menu item settings and do take the following steps:

Add symbol combination **jsn-icon-xxx** to menu item's parameter **Link CSS Style**, where **xxx** is the icon name.

UniIcons is the set of **20 predefined icons** that can be used for multiple purposes. For more information about available icons and their names, please read section **UniIcons** of this document.

Main Menu Rich Text PRO

You can add descriptive text to menu items to make them much clearer.

To set up descriptive text, you need to go to menu item settings and take the following steps:

Add descriptive text to menu item's parameter **Link Title Attribute**.

The screenshot shows the 'Link Type Options' dialog box. It includes fields for 'Link Title Attribute' (containing 'Start here'), 'Link CSS Style' (a color swatch), 'Link Image' (a file selection button with 'Select' and 'Clear' options), and 'Add Menu Title' (with radio buttons for 'No' and 'Yes', where 'Yes' is selected). A red arrow points from the 'Link Title Attribute' field in the dialog to the 'Start here' text in the menu item below.

Main Menu Icons and Rich Text in combination **PRO**

You can set up menu items to utilize both icons and rich text in combination.

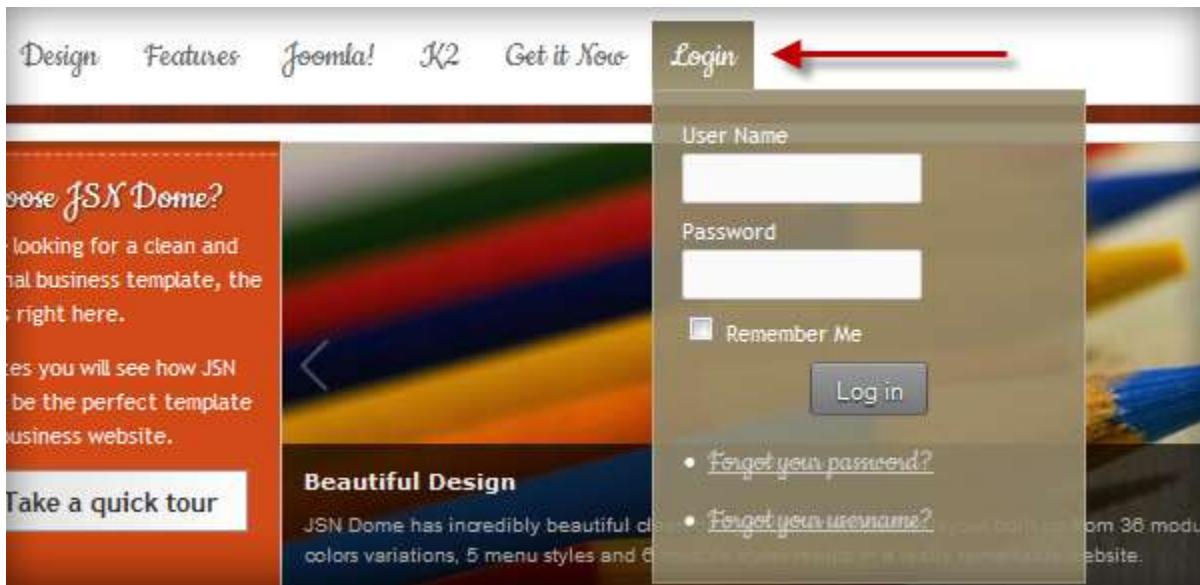

A screenshot of the Joomla administrator interface showing the 'Link Type Options' configuration for a menu item. The configuration includes:

- Link Title Attribute: Start here
- Link CSS Style: jsn-icon-home
- Link Image: A placeholder box with a 'Select' button and a 'Clear' button.
- Add Menu Title: An input field with 'No' and 'Yes' radio buttons, where 'Yes' is selected.

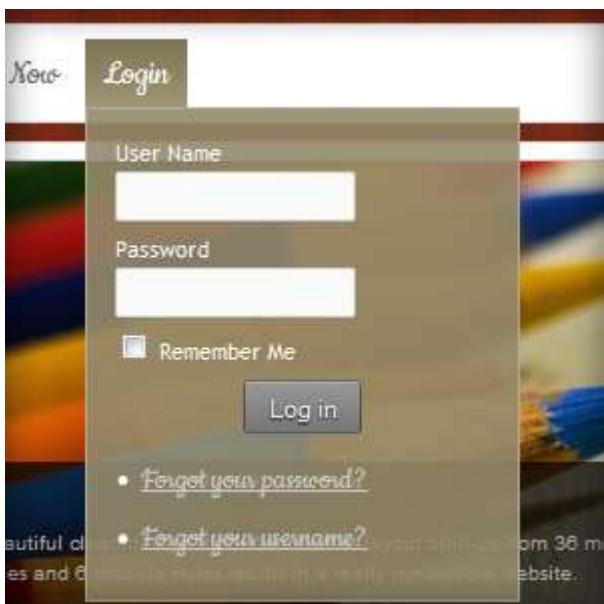

Presenting Main Menu with modules PRO

You can present Main Menu with modules in in position **mainmenu**.

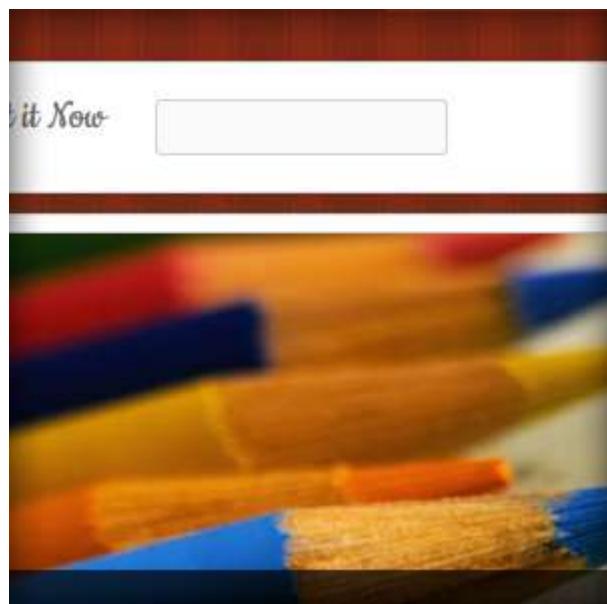

To do it, please set up parameters of the chosen module as following:

- Title: **Login** (*or any other you like*)
- Show title: **Show**
- Position: **mainmenu**
- Module Class Suffix:
 - **display-dropdown**: The module will be elegantly arranged in the submenu panel.
 - **display-inline**: The module will be located directly on the main menu bar.

Login module with **dropdown** type

Search module with **inline** type

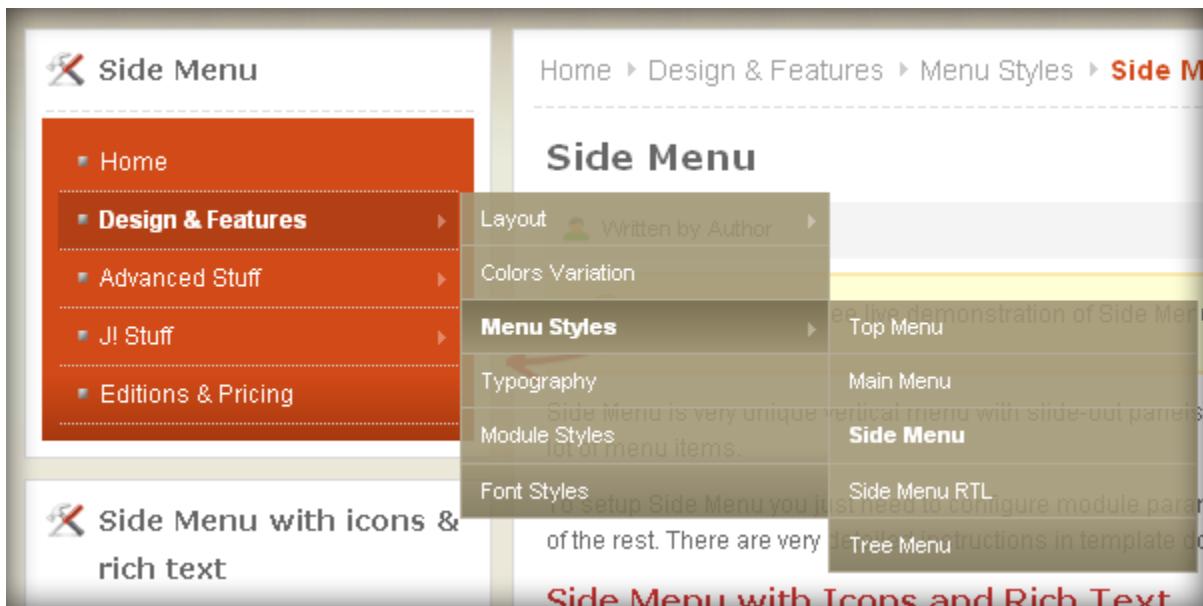

If you want to add an icon to this item, you add **jsn-icon-xxx** to the Module Class Suffix, with **xxx** is the icon name.

The top part of the image shows the "Advanced Options" configuration for a module. Under "Module Class Suffix", the value "dropdown jsn-icon-star" is entered. A red arrow points from this suffix value down to the "Login" module itself. The "Login" module is shown with a yellow star icon preceding the word "Login" in its header. The module's content (User Name, Password, Remember Me) is visible below the header.

Attention!

You are not allowed to insert Rich text to this Main menu item with Module.

Side Menu **PRO**

Side Menu is a unique vertical menu with slide-out panels. This menu is extremely efficient when you have complex navigation with a lot of menu items.

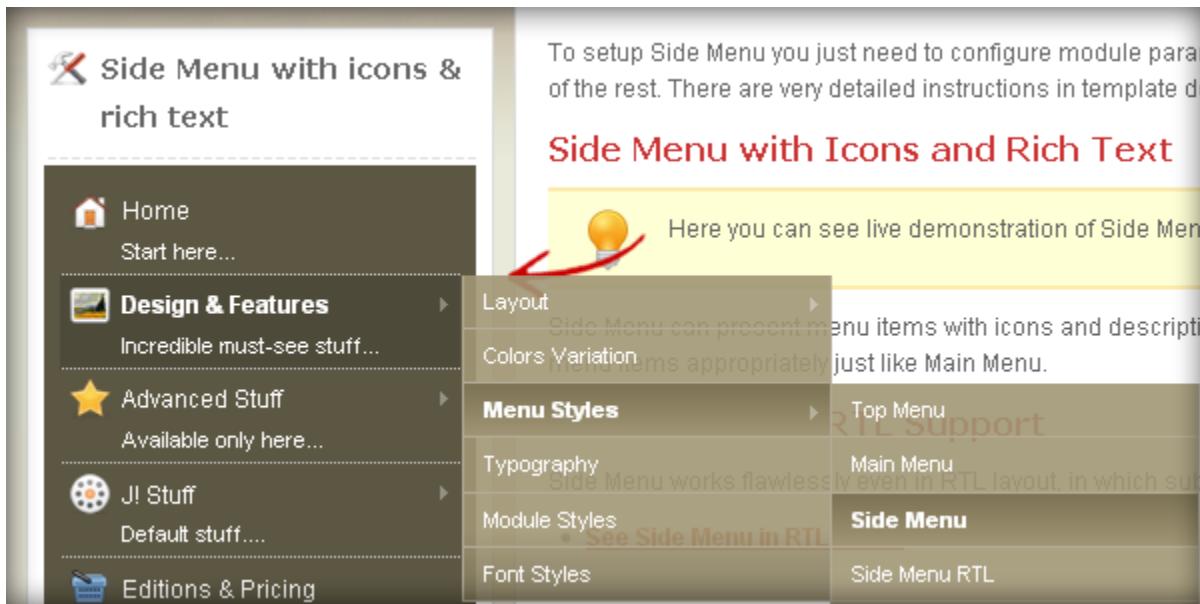

To set up Side Menu please select the menu module you want to use and set up parameters as following:

- Title: **Side Menu** (*or any other you like*)
- Show Title: **Show**
- Position: **left**
- Published: **Published**
- Access: **Public**
- Language: **All**
- Select Menu: **Main Menu** (*you might want to use another menu source here*)
- Start Level: **1**
- End Level: **All**
- Show sub-menu items: **Yes**
- Menu Class Suffix: **menu-sidemenu menu-iconmenu menu-richmenu** (*Please only use “menu-iconmenu” if you want to display icons and use “menu-richmenu” if you want to display rich text*)

Attention!

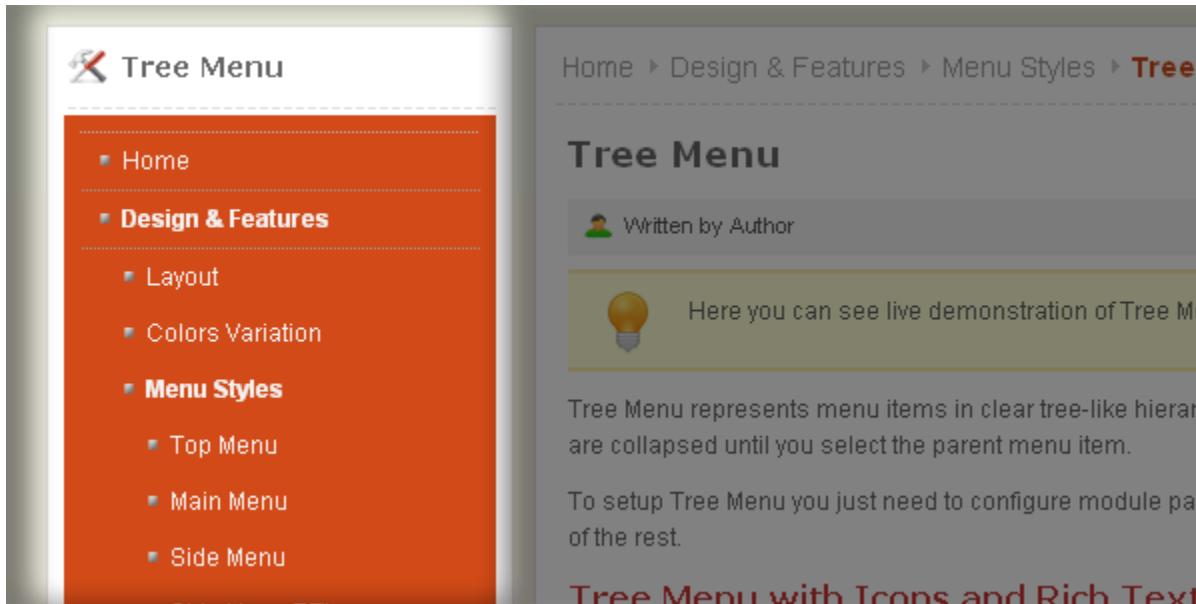

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

Side Menu Icons and Rich Text **PRO**

You can set up menu items to utilize both icons and rich text just as you can with Main Menu.

Tree Menu

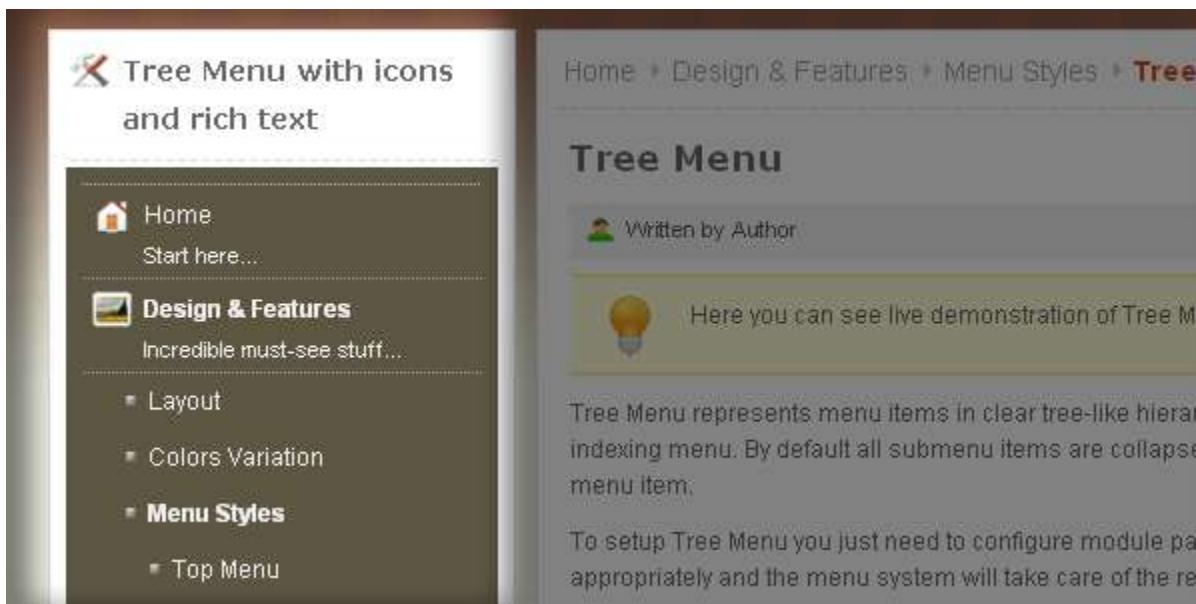

Tree Menu represents menu items in a clear tree-like hierarchy which is very appropriate for indexing menu. By default all submenu items are collapsed until you select the parent menu item.

To set up Tree Menu please select the menu module you want to use and set up parameters as following:

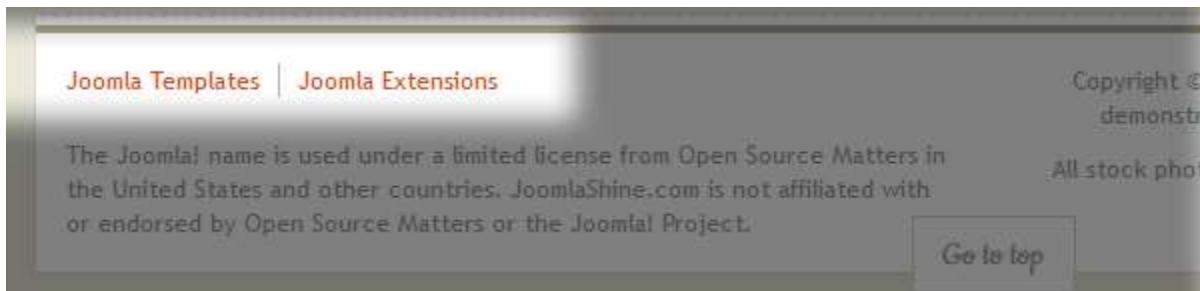

- Title: **Tree Menu** (*or any other you like*)
- Show Title: **Show**
- Position: **right**
- Access: **Public**
- Language: **All**
- Select Menu: **Main Menu** (*you might want to use another menu source here*)
- Start Level: **1**
- End Level: **All**
- Show sub-menu items: **No**
- Menu Class Suffix: **menu-treemenu menu-iconmenu menu-richmenu** (*Please only use "menu-iconmenu" if you want to display icons and use "menu-richmenu" if you want to display rich text*)

Tree Menu Icons and Rich Text **PRO**

You can set up menu items to utilize both icons and rich text just as you can with Main Menu.

Div Menu

Div Menu is a simple yet nice menu bar with items separated by barely visible dashes. This menu is very suitable for footer navigation presentation.

To set up Div Menu please select the menu module you want to use and set up parameters as following:

- Title: **Div Menu** (*or any other you like*)
- Show title: **Hide**
- Position: **footer**
- Access: **Public**
- Language: **All**
- Menu Name: **Main Menu** (*you might want to use another menu source here*)
- Start Level: **1**
- End Level: **1**
- Show sub-menu items: **No**
- Menu Class Suffix: **menu-divmenu**

Attention!

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

▶ Video tutorial

It guides you how to configure menus visually. Here are [video tutorials](#).

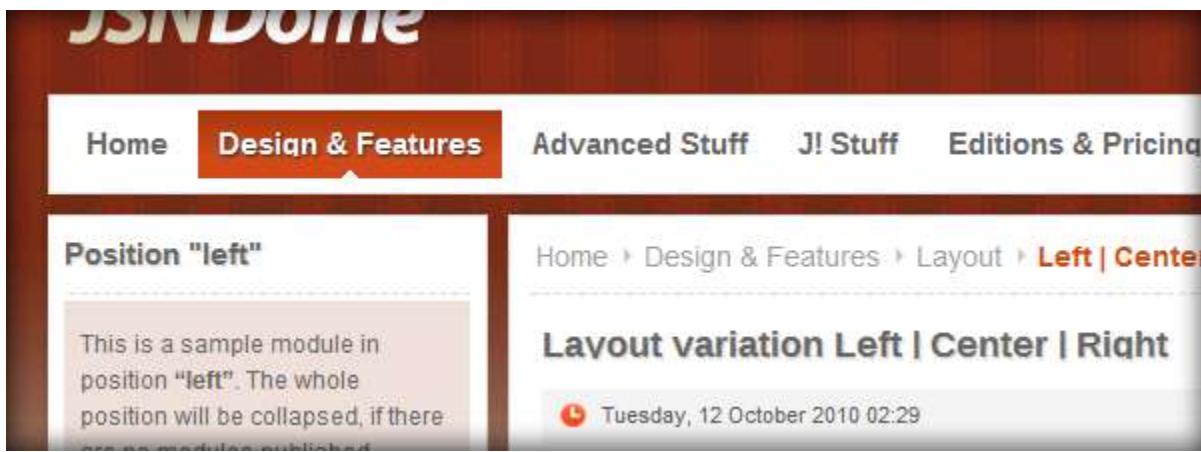

JSON Epic in the video is an example and these instructions can be applied to **JSON Templates** as well.

Font Styles

Font Face PRO

JSN Dome provides **three font face** options for major website types. Each font face option is actually a combination of two font types: one for content text, another for heading text and main navigation text. Additionally, for each font face, JSN Dome provides special font powered by **Google Font Directory**.

Business / Corporation Website (default)

Business font face

This compact neat text style is an excellent choice for business oriented websites as well as corporate websites. The combination of **Philosopher** and **Arial** font type looks very natural and common for most of users since they are most popular font types of used on the Internet.

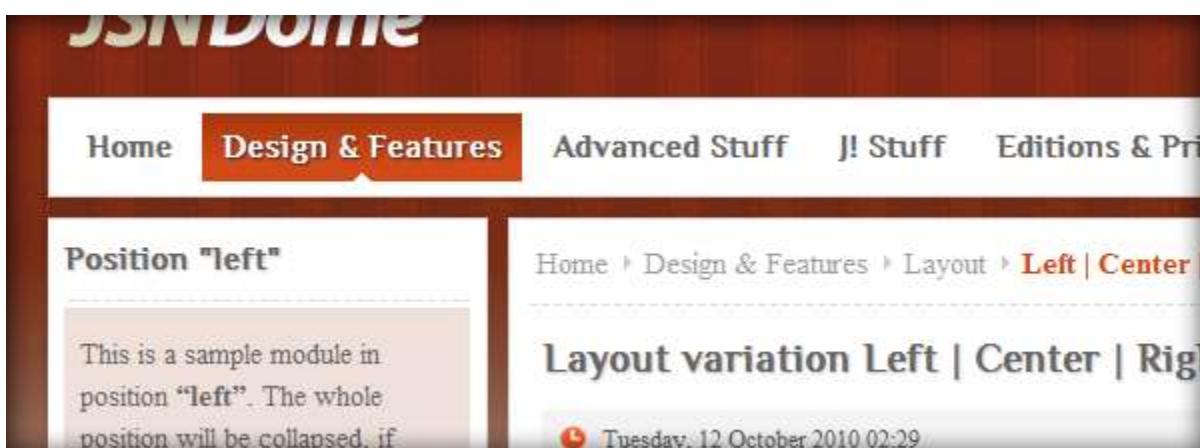

Personal / Blog Website

Personal / Blog font face

This text style is a little bigger than normal, which makes it a perfect choice for small websites like personal or blog websites. The combination of **Cookie** and **Trebuchet MS** font type make contents very easy to read and the looks impressive.

Online News / Magazines

Online News / Magazines font face

This text style utilizes two fonts called **Droid Serif** and **Times New Roman**. These fonts are widely used in the printing industry and in some of the extremely popular online news websites like [The New York Times](#). If you want to run an online news / magazine website, it's worth trying this font combination.

Custom

The screenshot shows a Joomla article titled "Font Styles" under the "Design" category. The article content includes sections for "Font Face" and "Special Font (powered by Google Font Directory)". It also features a note about custom fonts.

Home ▶ Design ▶ **Font Styles**

Font Styles

Written by Super User

Font Face

JSON Dome provides **3 font face options** for major website types. Each font face option is a combination of 2 font types: one for content text, another for heading text and main navi

Special Font (powered by Google Font Directory)

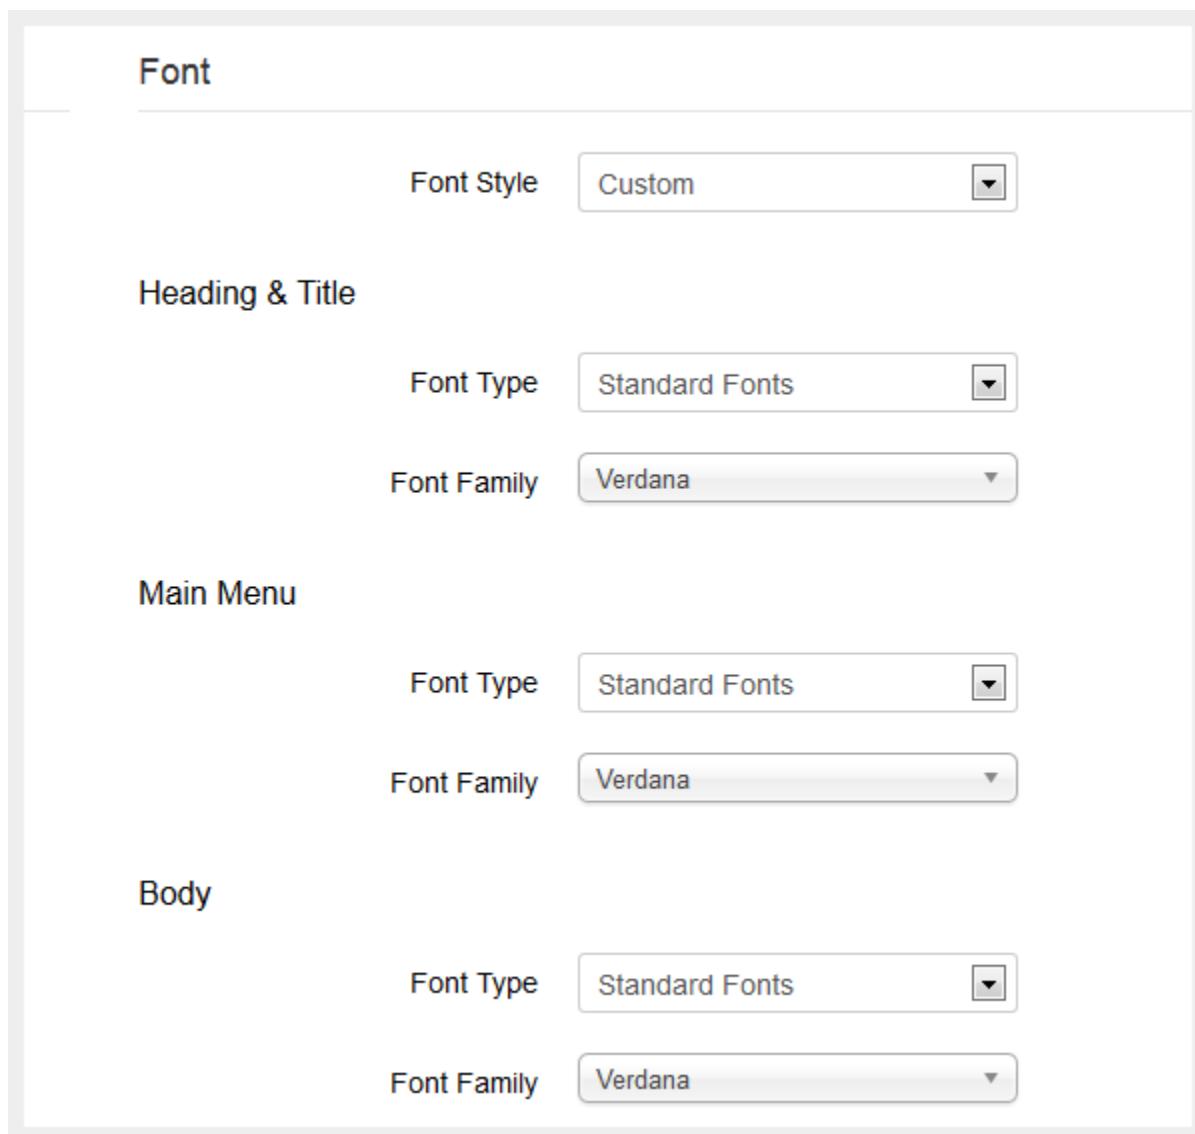

To make your website content look even better, we included feature to load special fonts

An example of using “custom” font face

Font face customization

Creating your own font face styles and font sizes would be much easier with the option “**Custom**”. It allows you to customize font faces of *Heading & Title*, *Main Menu* and *Body* as you desire. For each, there are two options of **Font type** :

- **Standard Fonts:** These are the most common fonts since they are installed in almost all computers already: For example Times New Roman, Verdana and so on.
- **Google Fonts:** These are beautifully styled fonts by Google; for example: Oswald, Open Sans and so on. They helps you identify your unique website easily.

The customization of Customize Body font face

Font size customization

You can adjust font size in percentage. Below are some examples of different font sizes.

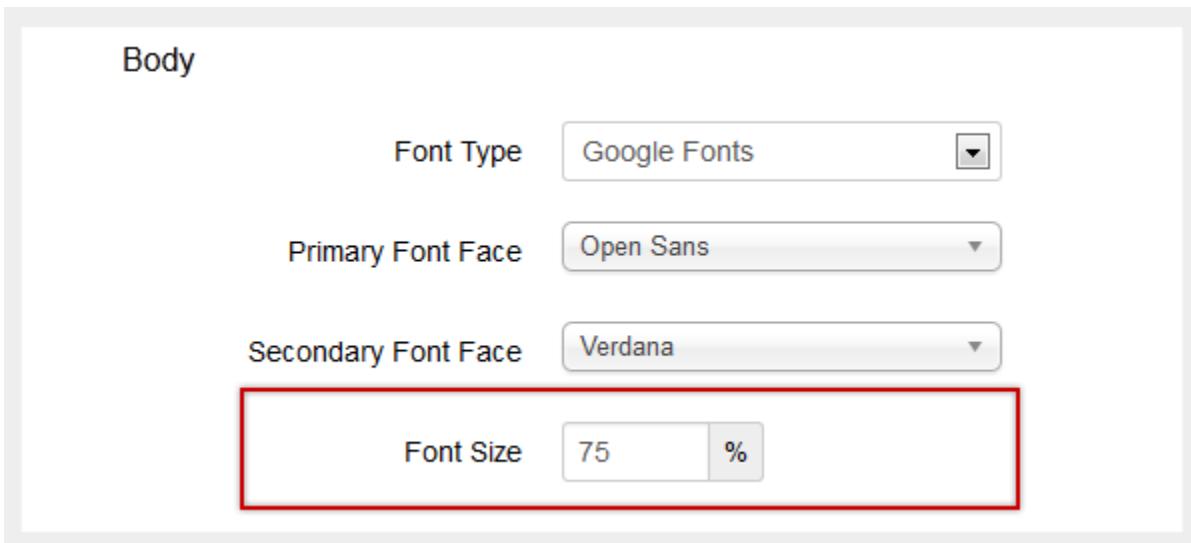

The screenshot shows a Joomla website's "Font Styles" page. The URL in the address bar is "Home > Design > Font Styles". The main title is "Font Styles". A user icon indicates it was written by "Super User". Below the title, there are two sections: "Font Face" and "Special Font (powered by Google Font Directory)". A note at the bottom states: "To make your website content look even better, we included feature to load special fonts from Google Font Directory. You can choose from 3 font face options: Arial, Helvetica, and Sans-serif." A "Font size 75% (default)" link is located below the "Special Font" section.

The screenshot shows a Joomla website's "Font Styles" page. The URL in the address bar is "Home > Design > Font Styles". The main title is "Font Styles". A user icon indicates it was written by "Super User". Below the title, there are two sections: "Font Face" and "Special Font (powered by Google Font Directory)". A note at the bottom states: "To make your website content look even better, we included feature to load special fonts from Google Font Directory. You can choose from 3 font face options: Arial, Helvetica, and Sans-serif." A "Font size 100%" link is located below the "Special Font" section.

Font size 100%

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

To configure it, choose **Font Style** “Custom” then adjust the parameter **Font size** as you want.

Customize Font size

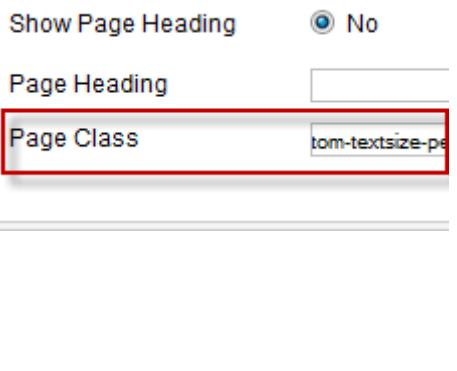

Text style configuration

You can configure template text style in the two following ways:

Configuration by template parameter (lowest priority)

	<p>Template text style can be set by template parameter Font Style in the section Styling.</p> <p>This is the default setting and has the lowest priority.</p>
--	--

Configuration by "Page Class" (higher priority)

	<p>Template text style can be set by Page Class of a menu item with syntax custom-textstyle-xxx, where xxx is the style you want to have.</p> <p>There are the following possible values: business, personal and news.</p> <p>For example:</p> <ul style="list-style-type: none">• custom-textstyle-personal <p>This setting will override the default settings by template parameter <i>Template Text Style</i>.</p>
---	--

Module Styles

JSON Dome provides **eight box designs** for module background styling which can be combined with **UniIcons** for module title styling.

Module styles are configured by module's parameter **Module Class Suffix**. All available values are described below and need to be applied **without double quotes**.

Module Box Designs

Box designs to be applied to modules.

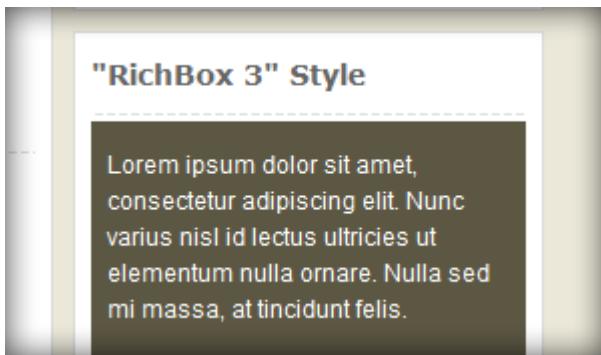

“richbox-1”

“richbox-2”

Box designs available in PRO edition only PRO

"richbox-3"

"purebox"

"lightbox-1"

"lightbox-2"

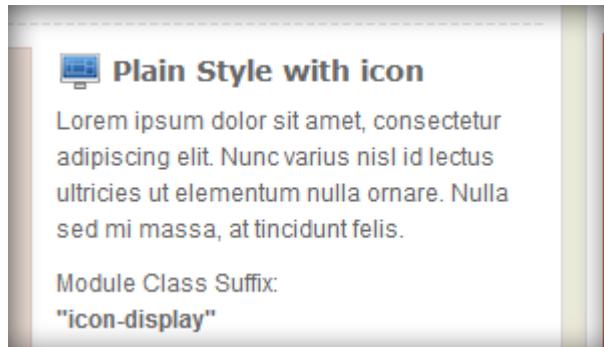

"solid-1"

"solid-2"

Module Icon Designs PRO

You can attach any of the **UniIcons** to the module's title. To set up icons, you need to add the string **jsn-icon-xxx** to the module class suffix, where **xxx** is the icon name.

"jsn-icon-display"

"jsn-icon-image"

All icon designs can be used in **combination with module box design** like the examples below:

"richbox-1 jsn-icon-calendar"

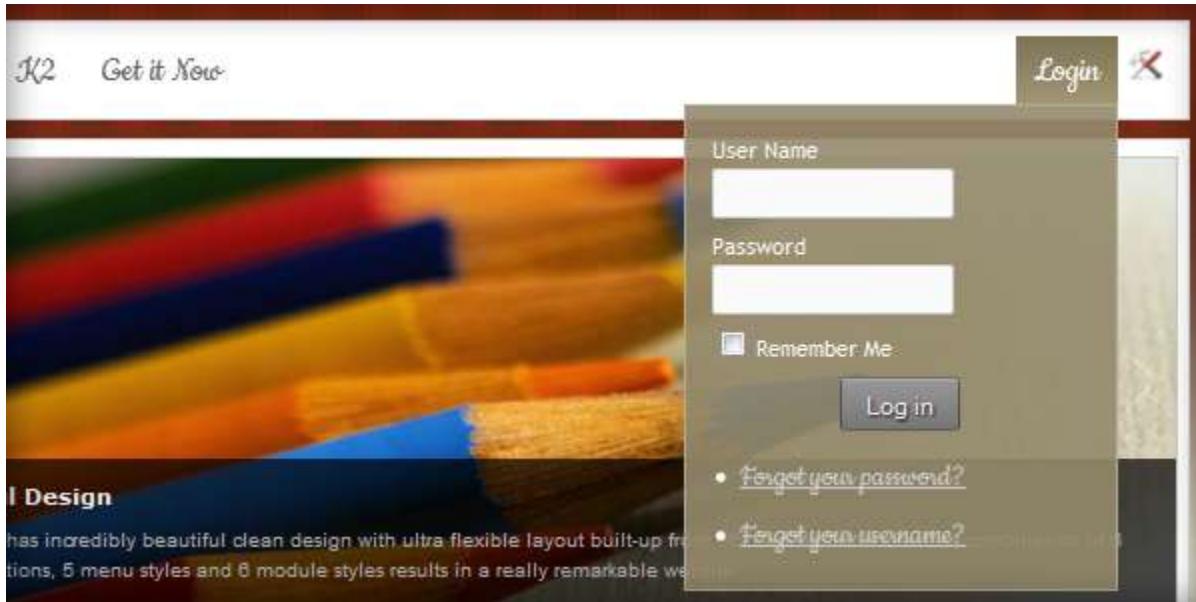

"richbox-3 jsn-icon-download"

For more information about available icons and their names, please read section **UniIcons** of this document.

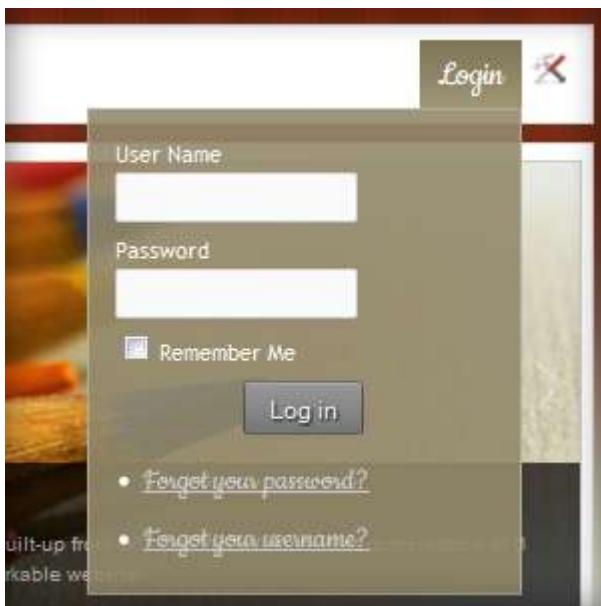

Presenting Modules in Toolbar position

You can present Modules in Toolbar position.

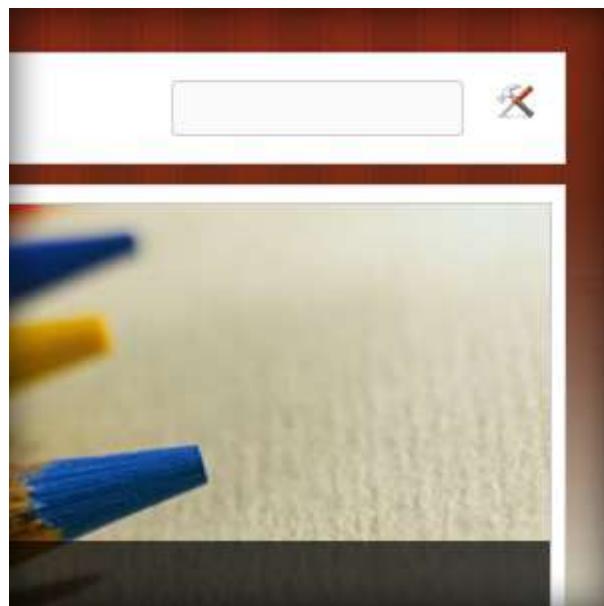

To do it, please set up parameters of the chosen module as following:

- Title: **Login** (*or any other you like*)
- Show title: **Show**
- Position: **toolbar**
- Module Class Suffix:
 - **display-dropdown**: The module will be elegantly arranged in the submenu panel.
 - **display-inline**: The module will be located directly on the main menu bar.

Login module with **dropdown** type

Search module with **inline** type

If you want to add an icon to this item, you add **jsn-icon-xxx** to the Module Class Suffix, with **xxx** is the icon name.

A screenshot of the Joomla module configuration interface under "Advanced Options". It shows three dropdown menus: "Alternative Layout" set to "Default", "Module Class Suffix" set to "dropdown jsn-icon-star", and "Caching" set to "No caching". A red arrow points from the "Module Class Suffix" dropdown to the screenshot below.

Typography

JSON Dome was created with **a strong focus on typography** and we believe it contains the most comprehensive content presentation capability. Headings, text, links, tables, images, everything was designed with high level of refinement. Let's take a look.

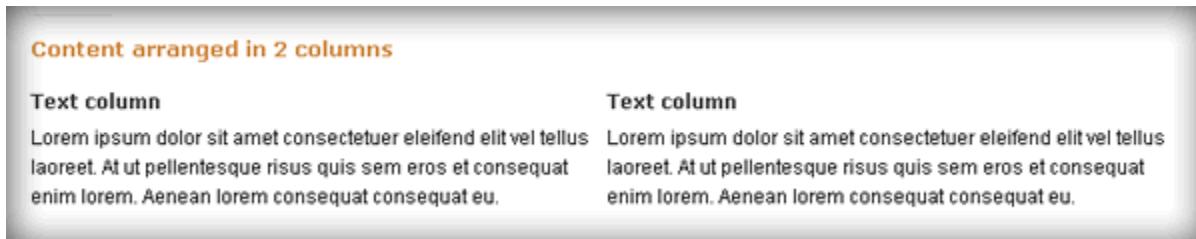

Content columns PRO

It's a pretty common situation when you need to arrange your content in multiple columns. JSON Dome offers you very a convenient and accessible method to create **multiple column content**. This is a real step forward removing table tags from your content and leaving them only for showing tabular data.

You can arrange your content in **as many columns as you like**. JSON Dome will detect the number of columns you have and automatically arrange them. The only thing you need to do is to set class **grid-layout** to parent DIV tag.

Below are screenshots of how this feature looks and example how to use it.

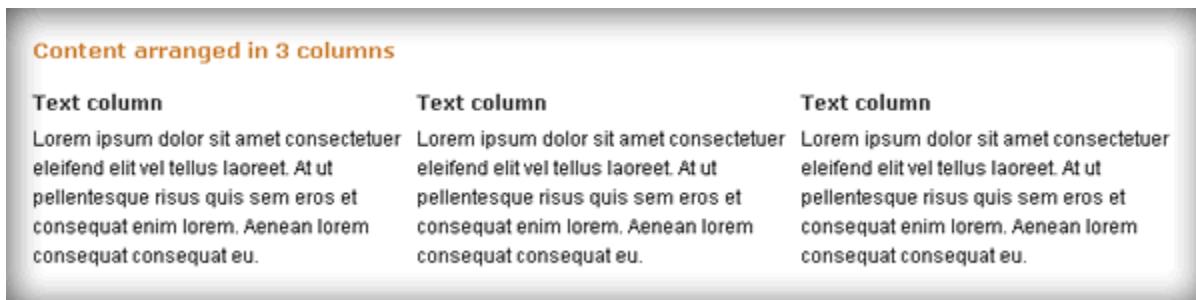

Content arranged in two columns

Usage:

```
<div class="grid-layout">
  <div>Text in column 1</div>
  <div>Text in column 2</div>
</div>
```

Content arranged in 3 columns

Usage:

```
<div class="grid-layout">
  <div>Text in column 1</div>
  <div>Text in column 2</div>
  <div>Text in column 3</div>
</div>
```

Heading styles

This is an H1 Header Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.	This is an H2 Header Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.
This is an H3 Header Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.	This is an H4 Header Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.
This is an H5 Header Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.	This is an H6 Header Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

As we all know, headings are “title” of undergoing text blocks, so it must have a distinguish look. JSON Dome provides styling for five main headings. To apply them you just need to wrap your heading text in regular heading tags like **<h1>...</h1>**, **<h2>...</h2>**, **<h3>...</h3>**, etc.

Text styles

JSON Dome provides **12 text styles** for making your content easier to scan and read. Below are screenshots of text styles and usage examples.

Preformatted text

You can use this style to present text with preserved spaces like text block of CSS code or other programming language.

Preformatted text

You can use this style to present text with preserved spaces like text block of CSS code or other programming language.

This is styling for preformatted text enclosed in tag <pre>.

```
a.readon {  
    color: #404040;  
}
```

Usage:

<pre>Your preformatted text</pre>

Quote text

You can use this style to quote somebody's speech, idea or a fragment from books, articles, etc.

Quote text

You can use this style to quote somebody's speech, idea or a fragment from some book, articles, etc.

“ This is styling for quote text enclosed in tag <blockquote>. You can use this style to quote somebody's speech, idea, etc. *Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.*

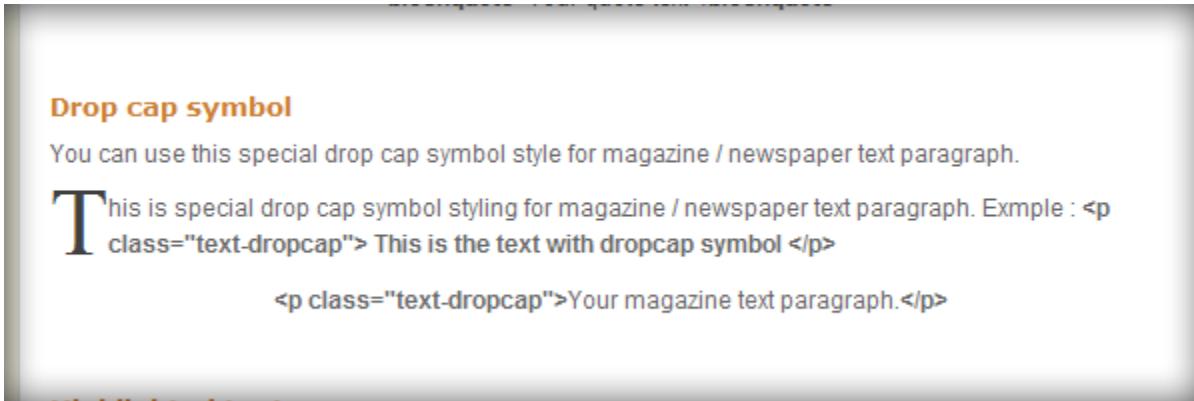

<blockquote>Your quote text</blockquote>

Usage:

<blockquote>Your quote text</blockquote>

You can use this special drop cap symbol style for magazine / newspaper text paragraph.

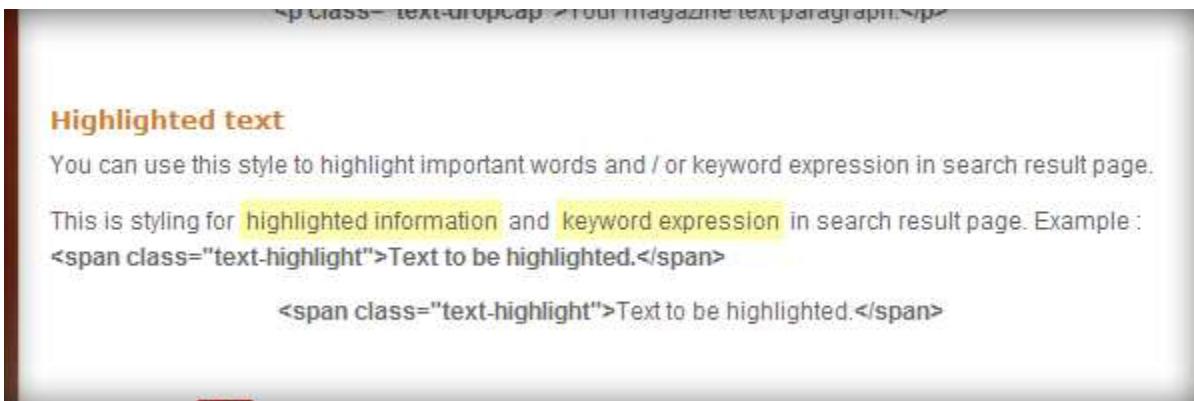

Usage:

```
<div class="text-dropcap"><p>Your magazine text paragraph.</p></div>
```

Highlighted text

You can use this style to highlight important words and / or keyword expression in search result page.

Usage:

```
<span class="text-highlight">Text to be highlighted.</span>
```

Alert text PRO

You can use this style for alert or warning text paragraphs which require user's attention.

Alert text PRO

You can use this style for alert or warning text paragraph requiring user's attention.

 This is styling for alert or warning text paragraph requiring user's attention. Example : <p class="text-alert"> Your alert text </p>. You can use tag <div> instead of tag <p>.

<p class="text-alert">Your alert text that requires user's attentions.</p>

You can use tag <p> like in example or tag <div> as well.

Usage:

<p class="text-alert">Your alert text that requires user's attentions.</p>.

<div class="text-alert">Your alert text that requires user's attentions.</div>.

Info text PRO

You can use this style for regular information text paragraphs that do not require much user's attention.

Info text PRO

You can use this style for regular information text paragraph that does not require much user's attention.

 This is styling for regular information text paragraph. Example : <p class="text-info"> Your information text.</p>. You can use tag <div> instead of tag <p> as well.

<p class="text-info">Your information text.</p>

Usage:

<p class="text-info">Your information text.</p>.

<div class="text-info">Your information text.</div>.

Download text PRO

You can use this style for information text paragraph related to the download process.

Download text PRO

You can use this style for information text paragraph related to download process.

This is styling for download information text paragraph. Example: <p class="text-download">Download information text.</p>. You can use tag <div> instead of tag <p> as well.

<p class="text-download">Your download text.</p>

Usage:

<p class="text-download">Your download text.</p>.

<div class="text-download">Your download text.</div>.

Tip text PRO

You can use this style for useful information like tips, hints or help text.

Tip text PRO

You can use this style for useful information like tips, hints or help texts

This is styling for useful information like tips, hint or help text paragraph. Example : <p class="text-tip">Tip text.</p>. You can use tag <div> instead of tag <p> as well.

<p class="text-tip">Your tip, hint or help text.</p>

You can use tag <p> like in example or tag <div> as well.

Usage:

<p class="text-tip">Your tip, hint or help text.</p>

<div class="text-tip">Your tip, hint or help text.</div>

Comment text PRO

You can use this style for comment text paragraphs.

Comment text PRO

You can use this style for comment text paragraph.

 This is styling for comment text paragraph. Example: `<p class="text-comment">Comment text</p>`. You can use tag `<div>` instead of tag `<p>` as well.

`<p class="text-comment">Your comment text.</p>`

You can use tag `<p>` like in example or tag `<div>` as well.

Usage:

`<p class="text-comment">Your comment text.</p>`
`<div class="text-comment">Your comment text.</div>`

Attachment text PRO

You can use this style for information text paragraphs related to attachment file.

Attachment text PRO

You can use this style for information text paragraph that related to attachment file.

 This is styling for attachment information text paragraph. Example: `<p class="text-attachment">Attachment text.</p>`. You can use tag `<div>` instead of tag `<p>` as well.

`<p class="text-attachment">Your attachment text.</p>`

You can use tag `<p>` like in example or tag `<div>` as well.

Usage:

`<p class="text-attachment">Your attachment text.</p>`

Video text PRO

You can use this style for description text paragraphs that related to video file.

Video text PRO

You can use this style to represent the description of a video file.

 This is styling for video text paragraph. Example : <p class="text-video">Video text </p>. You can use tag <div> instead of tag <p> as well.

<p class="text-video">Your description text.</p>.

You can use tag <p> like in example or tag <div> as well.

Usage:

<p class="text-video">Your video text.</p>
<div class="text-video">Your video text.</div>.

Audio text PRO

You can use this style for description text paragraph related to audio file.

Audio text PRO

You can use this style to represent the description of an audio file.

 This is styling for audio text paragraph. Example : <p class="text-audio">Audio text.</p>. You can use tag <div> instead of tag <p> as well.

<p class="text-audio">Your description text.</p>.

You can use tag <p> like in example or tag <div> as well.

Usage:

<p class="text-audio">Your attachment text.</p>
<div class="text-audio">Your attachment text.</div>.

Link styles PRO

Action link styles

With action link styles, website hyperlink's color will be changed when you hover mouse over website hyperlink.

Action link styles

JSON Dome is beautiful and colorful template design for personal websites. Equipped with powerful features to present content in whatever way you like. Super fast variation, 3 font styles, 5 menu styles, 6 modules under your management via convenient template.

No action link styles

JSON Dome is beautiful and colorful template design for personal websites. Equipped with powerful features to present content in whatever way you like. Super fast variation, 3 font styles, 5 menu styles, 6 modules under your management via convenient template.

Usage:

```
<a class="link-action" href="url">This is link text.</a>
```

Where **url** is the website hyperlink.

Example:

```
<a class="link-action" href="http://www.joomlashine.com">Joomlashine.</a>
```

Icon link styles

You can attach any of **UniIcons** to the front of any link by adding simple class to it.

Usage:

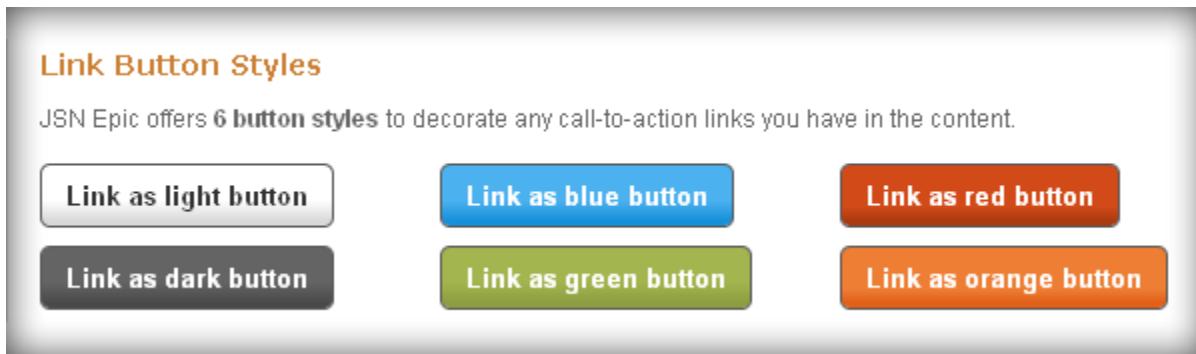

```
<a class="link-icon jsn-icon-xxx">This is link text.</a>, where xxx is the name of icon to be applied.
```

Example:

```
<a class="link-icon jsn-icon-download">This is link to download something.</a>
```

Button link styles

JSON Dome offers **6 button styles** to decorate any call-to-action links you have in the content.

Usage:

```
<a class="link-button button-xxx">This is link text.</a>
```

where **xxx** is the button color name selected from: **light, dark, green, orange, blue** and **red**.

Example:

```
<a class="link-button button-orange">See plans & pricing.</a>
```

Button and Icon link styles combined

You can use both button and icon link style combined.

Usage:

```
<a class="link-button button-xxx"><span class="link-icon jsn-icon-yyy">This is link text.</span></a>
```

where **xxx** and **yyy** are button color and icon names respectively.

Example:

```
<span class="link-button button-blue"><a class="link-icon jsn-icon-mail">Contact Us.</a></span>
```

Extension link styles

JSON Dome is able to attach not only descriptive icon to the front of link as described in the above section, but also **24 extension icons** to the end of the link.

There are two ways of utilization extension icons.

Automatic assignment

JSON Dome is able to detect links to various popular file extensions and assign icons accordingly. This feature utilizes the modern CSS2 specification allowing you to have links with meaningful icons assigned without any modification in XHTML code. Moreover, it can detect the protocol type to assign icons to links to instant messengers, email, etc.

Manual assignment

As stated before, most browsers' icons will be automatically assigned thanks to the modern CSS2 specification. Unfortunately IE6 does not support this specification and you have manually set an appropriate class for links. Also, this can help if, for some reason, you turned off the auto icon link template parameter but still want to manually apply icons to links.

Usage: <code>This is link text.</code>, where **xxx** is the icon name described below.

- "aim"

- "application"

- "archive"

- "calendar"

- "excel"

- "feed"

- "flash"

- "font"

- "movie"

- "msn"

- "music"

- "pdf"

- "skype"

- "text"

- "torrent"

- "vcard"

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

 - “css”

 - “mail”

 - “powerpoint”

 - “yahoo”

 - “doc”

 - “mobile”

 - “quicktime”

 - “windowsmedia”

JSON Dome utilizes the CSS sprite technique to reduce the number of HTTP requests to server in order to get icons.

Technically, all icons are merged in one single image file and visitors will need to make **one single**

request/download to get that file with all icons. If you have extra time, please read [more about CSS sprites](#).

Table styles PRO

Tabular data is a very common type of information to be presented on the web. By default, tables look ugly and not much readable. With JSON Dome you have **three table styles** to present virtually any kind of tabular data you have.

Color Header table style

Table header	Column header 1	Column header 2	Column header 3
Row header 1		Dolor sit amet	
Row header 1		Dolor sit amet	
Row header 1		Dolor sit amet	
Row header 1		Dolor sit amet	
Table footer		Footer data	

Usage:

```
<table class="table-style style-colorheader">...</table>
```

Color Stripes table style

Table header	Column header 1	Column header 2	Column header 3
Row header 1		Dolor sit amet	
Row header 1		Dolor sit amet	
Row header 1		Dolor sit amet	
Row header 1		Dolor sit amet	
Table footer		Footer data	

Usage:

```
<table class="table-style style-colorstripes">...</table>
```

Grey Stripes table style

Table header	Column header 1	Column header 2	Column header 3
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Table footer		Footer data	

Usage:

```
<table class="table-style style-greystripes">...</table>
```

Attention!

In order to get table styles shown correctly, you need to create solid XHTML code as show bellow.

```
<table width="100%" class="table-style style-colorheader">
    <thead>
        <tr>
            <th>Table header</th>
            <th>Column header 1</th>
            <th class="highlight">Column header 2</th>
            <th>Column header 3</th>
        </tr>
    </thead>
    <tfoot>
        <tr>
            <th>Table footer</th>
            <td colspan="3">Footer data</td>
        </tr>
    </tfoot>
    <tbody>
        <tr class="odd">
            <th>Row header 1</th>
            <td> Lorem ipsum</td>
            <td class="highlight">Dolor sit amet</td>
            <td> Lorem ipsum</td>
        </tr>
    </tbody>
</table>
```

List styles

List is the crucial element in every content, not only online websites. List can really help readers to scan the content and catch important pieces by just a glance.

Standard list styles

Unordered list

Unordered list

This is styling for standard unordered list. Example:

- Lorem ipsum dolor sit amet
- Consetetur sadipscing elitr
- Sed diam voluptua

Usage: `...`

Ordered list

Ordered list

This is styling for standard ordered list. Example: ``

1. Lorem ipsum dolor sit amet
2. Consetetur sadipscing elitr
3. Sed diam voluptua

Usage: `...`

Nobullet list

Nobullet list

This is styling for standard nobullet list. Example:

 Lorem ipsum dolor sit amet
 Consetetur sadipscing elitr
 Sed diam voluptua

Usage: `<ul class="list-nobullet">...`

Horizontal list

Horizontal list

This is styling for standard horizontal list. Example:

 Lorem ipsum Consetetur sadipscing Sed diam

Usage: `<ul class="list-horizontal">...`

Arrow list styles

Red arrow

Red arrow list

This is styling for list with red arrow bullets.

Example: `<ul class="list-arrow-red">...`.

- ▶ Lorem ipsum dolor sit amet
- ▶ Consetetur sadipscing elitr
- ▶ Sed diam voluptua

Blue arrow

Blue arrow list

This is styling for list with blue arrow bullets.

Example: `<ul class="list-arrow-blue">...`.

- ▶ Lorem ipsum dolor sit amet
- ▶ Consetetur sadipscing elitr
- ▶ Sed diam voluptua

Usage:

`<ul class="list-arrow arrow-red">...`

Green arrow

Green arrow list

This is styling for list with green arrow bullets.

Example: `<ul class="list-arrow-green">...`.

- ▶ Lorem ipsum dolor sit amet
- ▶ Consetetur sadipscing elitr
- ▶ Sed diam voluptua

Usage:

`<ul class="list-arrow arrow-blue">...`

Usage:

`<ul class="list-arrow arrow-green">...`

Icon list styles PRO

You can attach any of **UniIcons** to items in the list. To set up icons, you need to add string **jsn-icon-xxx** to **** class, where **xxx** is the icon name.

Tag icon list

Usage:

```
<ul class="list-icon jsn-icon-article"><li>...</li></ul>
```

Calendar icon list

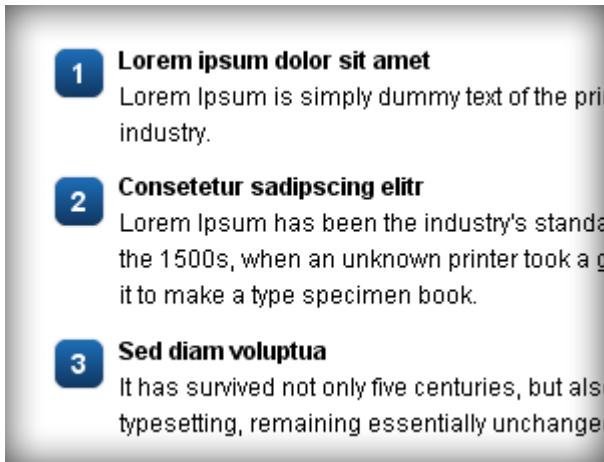

Usage:

```
<ul class="list-icon jsn-icon-folder"><li>...</li></ul>
```

For more information about available icons and their names, please read section **UniIcons** of this document.

Number list style **PRO**

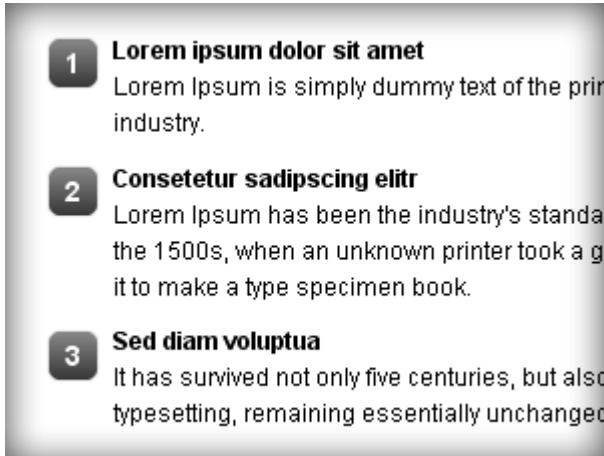

Blue Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-blue"><li>...
```

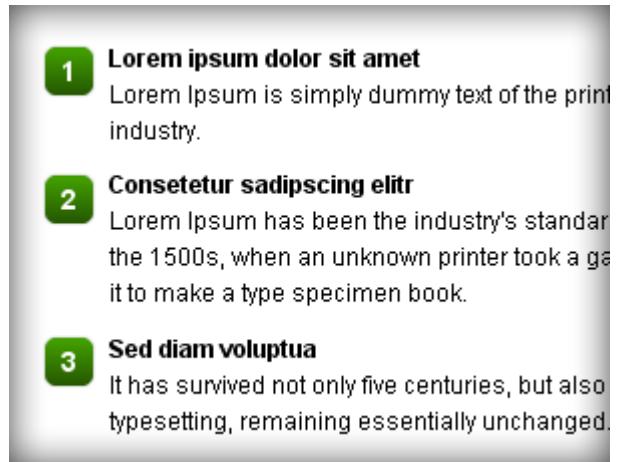

Grey Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-grey"><li>...
```

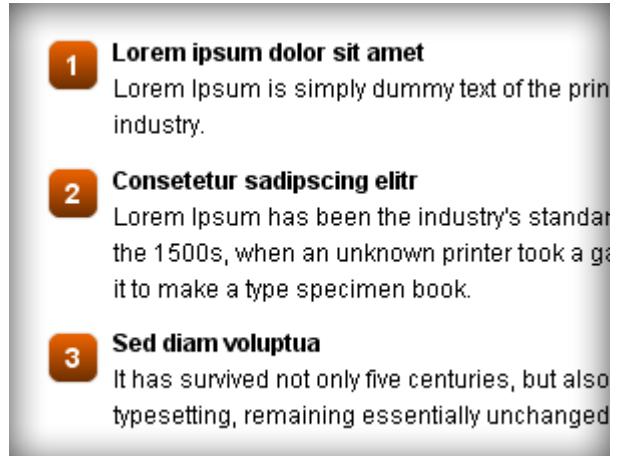

Green Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-green"><li>...
```

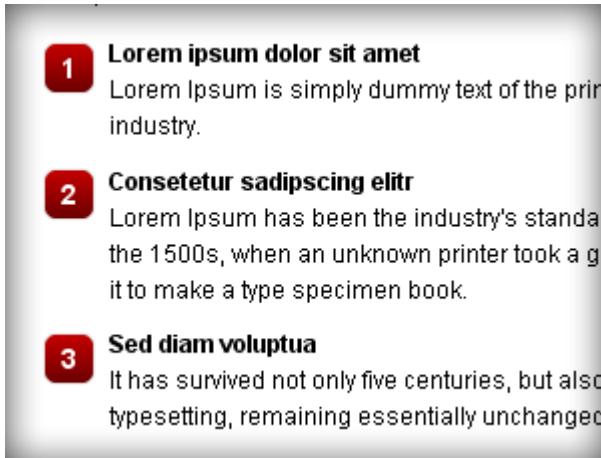

Orange Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-orange"><li>...
```

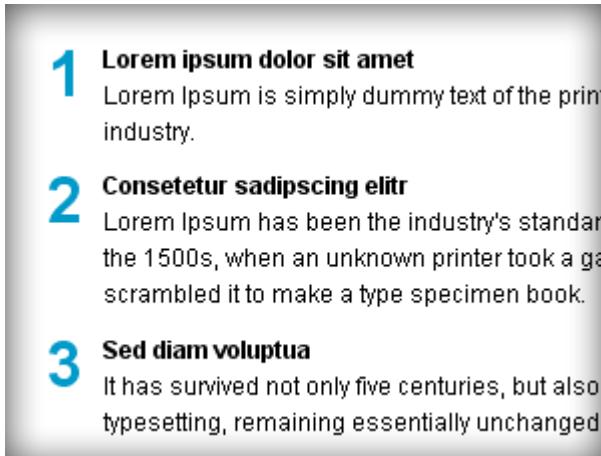

Red Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-red"><li>...
```

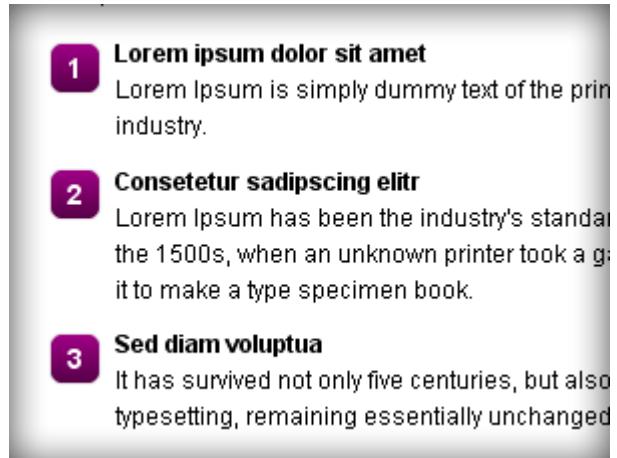

Blue Digit number list

Usage:

```
<ul class="list-number-digit digit-blue"><li>...
```

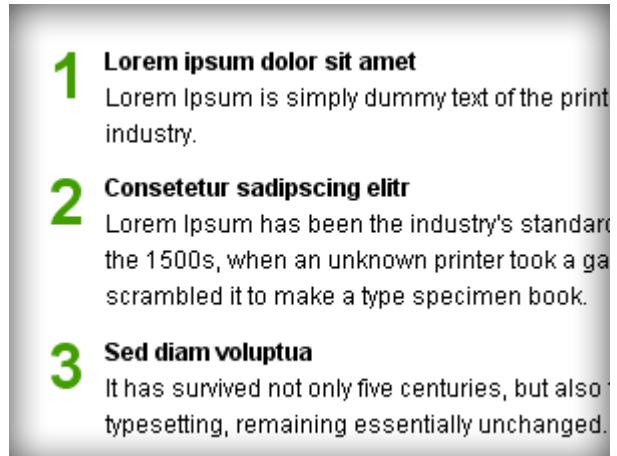

Violet Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-violet"><li>...
```

Green Digit number list

Usage:

```
<ul class="list-number-digit digit-green"><li>...
```

Grey Digit number list

1 **Lorem ipsum dolor sit amet**

Lorem Ipsum is simply dummy text of the print industry.

2 **Consetetur sadipscing elitr**

Lorem Ipsum has been the industry's standard since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

3 **Sed diam voluptua**

It has survived not only five centuries, but also the transition to typesetting, remaining essentially unchanged.

Orange Digit number list

1 **Lorem ipsum dolor sit amet**

Lorem Ipsum is simply dummy text of the print industry.

2 **Consetetur sadipscing elitr**

Lorem Ipsum has been the industry's standard since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

3 **Sed diam voluptua**

It has survived not only five centuries, but also the transition to typesetting, remaining essentially unchanged.

Usage:

```
<ul class="list-number-digit digit-grey"><li>...
```

Red Digit number list

1 **Lorem ipsum dolor sit amet**

Lorem Ipsum is simply dummy text of the print industry.

2 **Consetetur sadipscing elitr**

Lorem Ipsum has been the industry's standard since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

3 **Sed diam voluptua**

It has survived not only five centuries, but also the transition to typesetting, remaining essentially unchanged.

Usage:

```
<ul class="list-number-digit digit-orange"><li>...
```

Violet Digit number list

1 **Lorem ipsum dolor sit amet**

Lorem Ipsum is simply dummy text of the print industry.

2 **Consetetur sadipscing elitr**

Lorem Ipsum has been the industry's standard since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

3 **Sed diam voluptua**

It has survived not only five centuries, but also the transition to typesetting, remaining essentially unchanged.

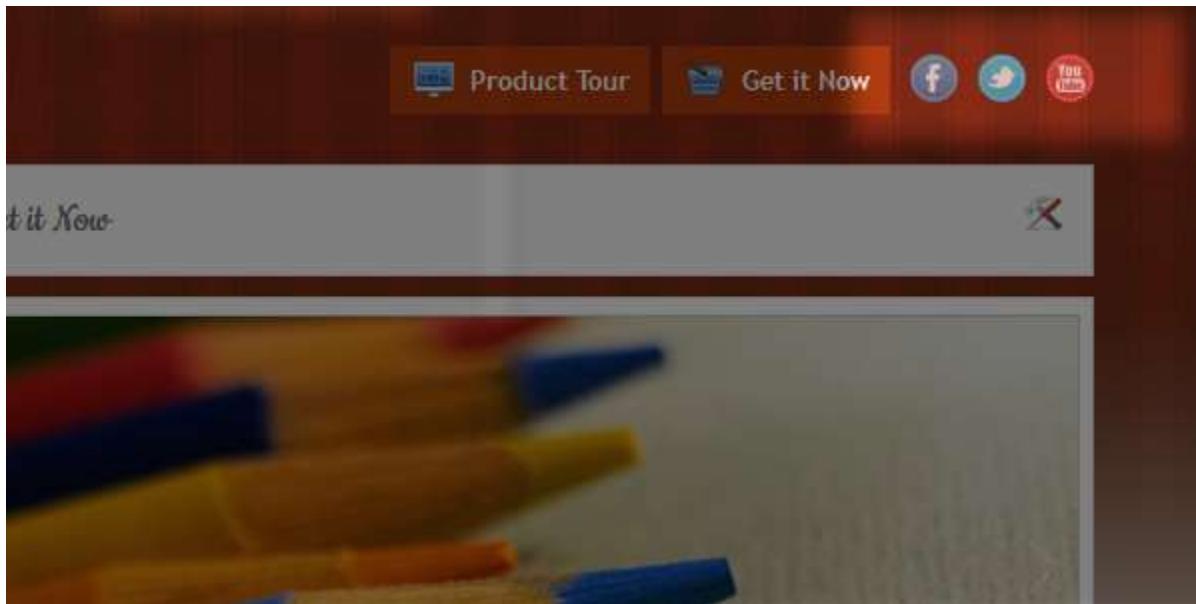

Usage:

```

```

Usage:

```
<ul class="list-number-digit digit-violet"><li>...
```

Social Icons PRO

Social icons in JSON Dome

In JSON Dome, you are free to integrate your social channels without digging into the code. Just configure the social icons with their URLs with the parameter “**Social icons**” in the section “**SEO & System**” in the back-end. You can also change positions of social icons by dragging and dropping them.

Change social channels

Change positions of social channels

There are three default social channels: Facebook, Twitter and YouTube. You can integrate more 9 social channels: Google+, Pinterest, MySpace, Flickr, Dribble, StumbleUpon, Yahoo, Skype and RSS. Just click the button on the right and add new URLs to the pop-up “Social Network Integration”, the corresponding social integrations will be shown up.

Social Network Integration

Facebook	<code>http://www.facebook.com/joomlashine</code>
Twitter	<code>http://www.twitter.com/joomlashine</code>
Google+	<code>http://plus.google.com/your_user_id</code>
YouTube	<code>http://www.youtube.com/joomlashine</code>
Pinterest	<code>http://www.pinterest.com/your_user_name</code>
MySpace	<code>http://www.myspace.com/your_user_name</code>
Flickr	<code>http://www.flickr.com/people/your_user_name</code>
Dribble	<code>http://www.dribble.com/your_user_name</code>
StumbleUpon	<code>http://your_user_name.stumbleupon.com</code>
Yahoo	<code>ymsgr:sendim?your_user_name</code>
Skype	<code>skype:your_user_name?call</code>

Save **Close**

Site Tools PRO

JSON Dome provides a brand new feature to enhance website user experience with **Color Selector**. By enabling this selector, you will certainly be giving visitors the best user experience on your website. The setting from Site tools will be stored as visitor's browser cookies for further usage.

Site tools Presentation

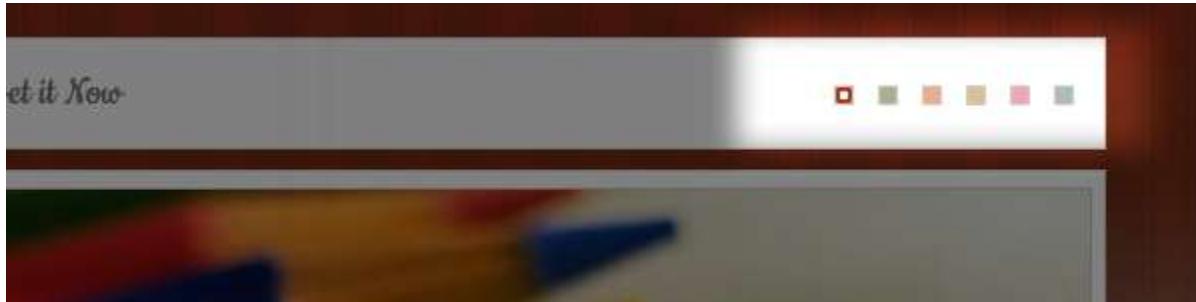

You have two options to present Site tools.

As Menu

With this option, all selectors are elegantly arranged in the submenu panel. The as-menu animation, transparency and background color settings will be inherited from the Main Menu settings.

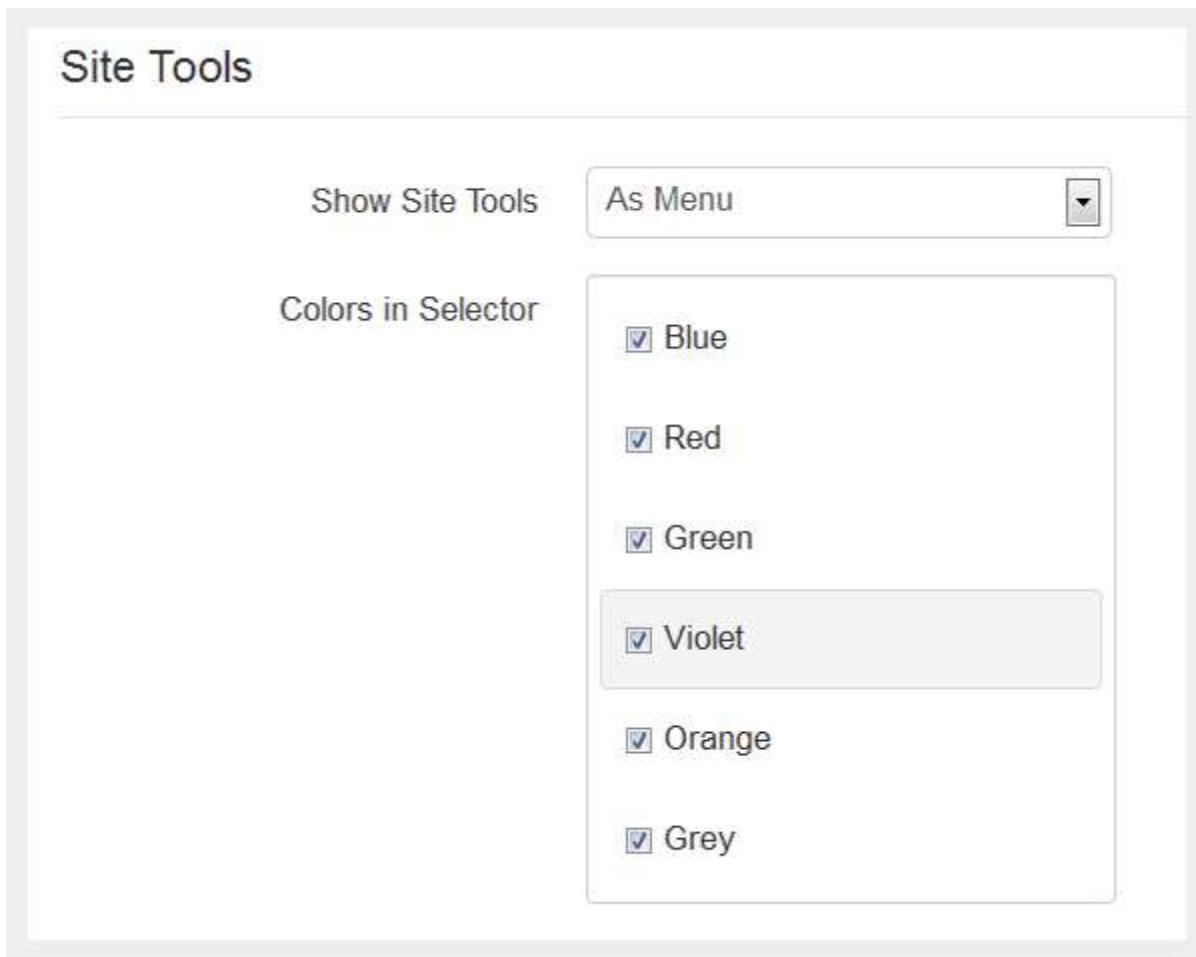

Inline Row

With this option, all selectors are located directly on the main menu bar. If you want to enable only some selector, this option is the best.

Colors in Site Tools

In the back-end, you are able to manage your site tools easily. You can choose which colors to be show up and rearrange their orders as you want by ticking or dragging then dropping the applicable checkboxes.

Colors in Site Tools

▶ Video tutorial

It guides you how to configure sitetools visually. Here are [video tutorials](#).

JSON Epic in the video is an example and these instructions can be applied to **JSON** template as well.

Extended Styles

One of the hottest features of JSON Dome is that it supports 2 popular Joomla extensions: **Kunena & K2**.

Kunena PRO

Thanks to Kunena, you can create a forum easily. Now JSON Dome supports Kunena with a Kunena Theme. You can create a forum with enhanced designs, 6 color variations, RTL support and 4 modules styled.

The screenshot shows the JSON Dome Kunena forum interface. At the top, there's a navigation bar with links for Home, Design, Features, Joomla!, Get it Now, and a red 'Kunena' button. Below the navigation is a breadcrumb trail: Home > Kunena. The main content area has a header 'Main Forum' with a sub-instruction: 'This is the main forum section. It serves as a container for categories for your topics.' Below this, there are two forum categories: 'Welcome Mat' and 'Suggestion Box'. The 'Welcome Mat' category has 1 topic and 0 replies, with the last post being 'Welcome to Kunena!' by 'admin' 2 hours 38 minutes ago. The 'Suggestion Box' category has 0 topics and 0 replies, with a note: 'No Posts'. To the left of these categories is a sidebar with the title 'Who Is Online' showing 'Total users online: 0 Members and 0 Guests Online' and a legend for user roles: Site Administrator, Global Moderator, Moderator, Banned, User, Guest. At the bottom of the main content area is a 'Kunena Forum Statistics' section with various metrics like Total Messages, Total Subjects, Total Sections, Total Categories, and Today/Yesterday Open counts. On the right side of this section are links for 'User List', 'More Statistics', and a 'Kunena' link.

Kunena without JSON Dome theme

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

The screenshot shows the Kunena forum integrated into a Joomla site using the JSON Dome theme. At the top, there's a red header bar with the "JSONDome" logo, a "Product Tour" button, and a "Get It Now" button. Below the header is a navigation menu with links: Home, Design, Features, Joomla!, Get it Now, and a red "Kunena" button. The main content area has a white background.

Main Forum: This section is described as a container for topics. It features two boxes: "Welcome Mat" (1 NEW) and "Suggestion Box".

- Welcome Mat:** Encourages new members to introduce themselves. Last post was "Welcome to Kunena!" by admin 2 hours 41 minutes ago.
- Suggestion Box:** Invites users to share feedback. No posts have been made.

Who is Online: Shows 1 Member and 4 Guests online. A user icon for "admin" is shown.

Kunena Forum Statistics: Displays various forum metrics. On the left, there's a bar chart icon. On the right, a link to "User List" and "More Statistics".

Total Messages:	1	Total Subjects:	1
Total Sections:	1	Total Categories:	2
Today Open:	1	Yesterday Open:	0
Today Total Answer:	0	Yesterday Total Answer:	0

Kunena with JSON Dome theme

Styled modules

You can set 4 module designs - Latest module, Search module, Login module and Statistics module as Right-to-left layout.

The screenshot shows the Joomla Advanced Search module interface. The top header is orange with the text "Advanced Search". The interface is divided into two main sections: "Search by User Name" and "Search by Keyword". The "Search by User Name" section contains a text input field labeled ":User Name" and a checkbox labeled ":Exact Name". The "Search by Keyword" section contains a text input field labeled ":Keywords" and a dropdown menu labeled "Search entire posts". Below these sections is another orange header "Search Options". Under "Search Options", there are three main sections: "Find Posts from", "Sort Results by", and "Jump to Result Number". The "Find Posts from" section includes dropdown menus for "And newer" and "A year ago". The "Sort Results by" section includes dropdown menus for "Decreasing order" and "Posting date". The "Jump to Result Number" section includes a dropdown menu for "Show 15 Search Results" and a text input field for the result number, currently showing "0". At the bottom of the module are two buttons: "Cancel" and "Search".

Search module in Right-to-left layout

Installation

1. You install [Kunena](#) via Joomla! administration.
2. Log in the [Customer Area](#), download JSON Dome theme for Kunena.
3. Unzip file **jsn_dome_kunena_unzip_me_first.zip**, then copy the folder **jsn_dome** to the path **joomla_root\components\com_kunena\template**
4. Go to **joomla_root\components\com_kunena\template\jsn_dome\language**, copy the file **en-GB.com_kunena.tpl_jsn_dome** and paste it in the folder **joomla_root\components\com_kunena\language\en-GB**
5. Go to the website backend -> **Component -> Kunena Forum -> Template Manager** -> Set **JSON Dome** as default.

Now you have the JSON Dome theme on your website.

Attention!

Kunena is not included in the JSON Dome template package. You can download Kunena freely at

<http://www.kunena.org/>

K2 Support

Here is how K2 and JSN Dome combination looks like. You can see all **K2 components** such as K2 Comment, K2 Content, K2 Users, TagCloud, Article, etc work well with JSN Dome.

The screenshot displays the JSN Dome Joomla template. At the top, there's a navigation bar with links for 'Product Tour', 'Get It now', 'K2 Categories', and 'New Article'. Below the navigation, a secondary menu includes 'Home', 'Design', 'Features', 'Joomla!', 'Get it now', and a red-highlighted 'K2 Component' link. The main content area features a 'K2 Comments' sidebar on the left containing three comments from 'Super User'. The central column shows a 'Super User' article with a thumbnail, author information ('Written by Super User, Friday, 10 August 2012'), and a snippet of the content: 'Nullam vel mi in eros venenatis commodo. Morbi quis sem at elit porttitor condimentum nec id risus. Mauris dictum luctus sodales.' To the right, a 'K2 Content' sidebar displays another article by 'Super User' with a thumbnail, author info ('Written by Super User, Thursday, 09 August 2012'), and a snippet: 'The 'de facto' content solution for Joomla! professionals!'. A 'Read more...' link is present. The bottom right of the sidebar contains a photo of a desk with papers and a computer monitor, along with text about Joomla! being a great content management system.

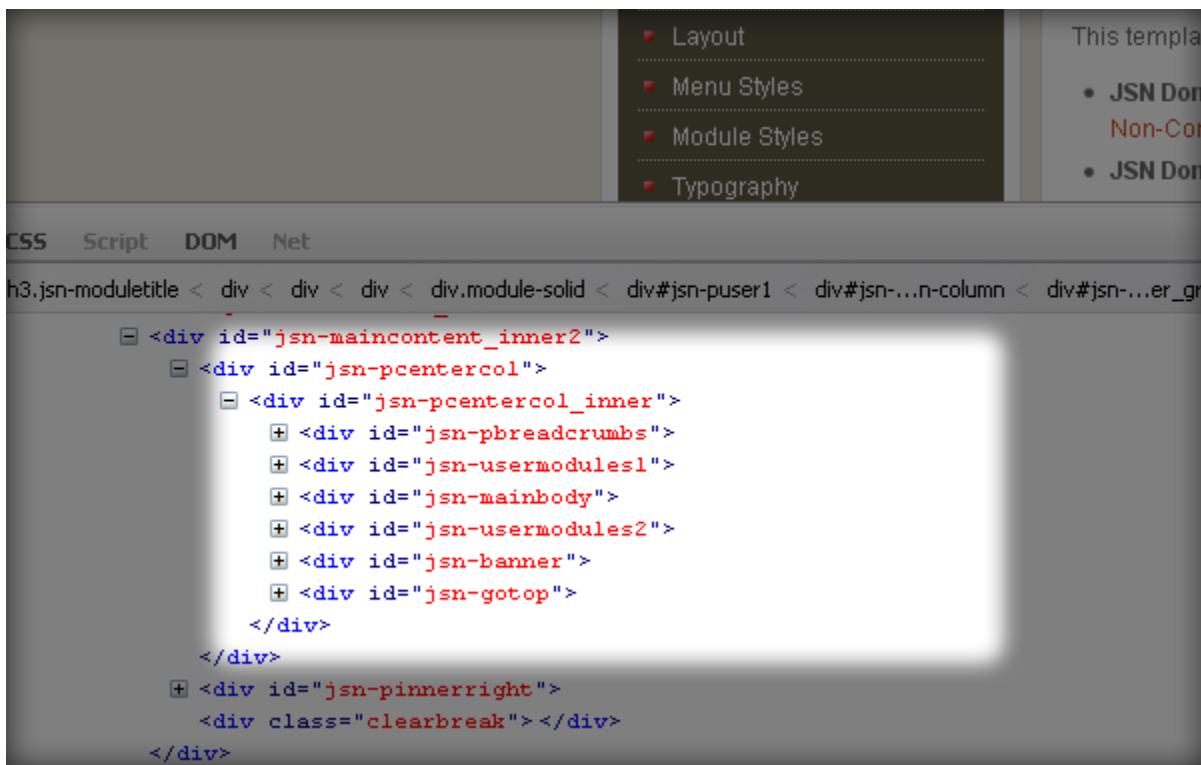

JSN Dome is fully supported K2 style

Attention!

K2 is not included in the JSN Dome template package. You can download K2 freely at <http://getk2.org/>

SEO & System

Source ordering

One of the most important SEO techniques is to make sure that search engines can find your critical content before others. To make this possible, in our template code structure we generate the “**center**” part first and only after that “**left**” and “**right**” columns.

In this way, you can be sure that search engines will see your critical content first. You can use Lynx browser both [online](#) or [offline](#) to make sure of that.

“Go to top” Link **PRO**

The screenshot shows a Joomla website using the JSN Dome PRO template. At the bottom of the page, there is a dark footer bar containing several items: a copyright notice for joomlashine.com, a note about the Joomla license, a link to Joomla Extensions, and a "Go to top" button. The "Go to top" button is a white rectangular button with a black border and the text "▲ Go to top".

This feature allows you to put '**Go to top**' link at the bottom of page. It will smoothly scroll your page to the top, which is nice and good for website usability.

Auto Icon link PRO

The screenshot shows a Joomla configuration interface with a navigation bar at the top: Get Started, Logo, Layout, Styling, Menu & Site Tools. Below this is a section titled 'SEO & Accessibility'. It contains three configuration options with radio button inputs:

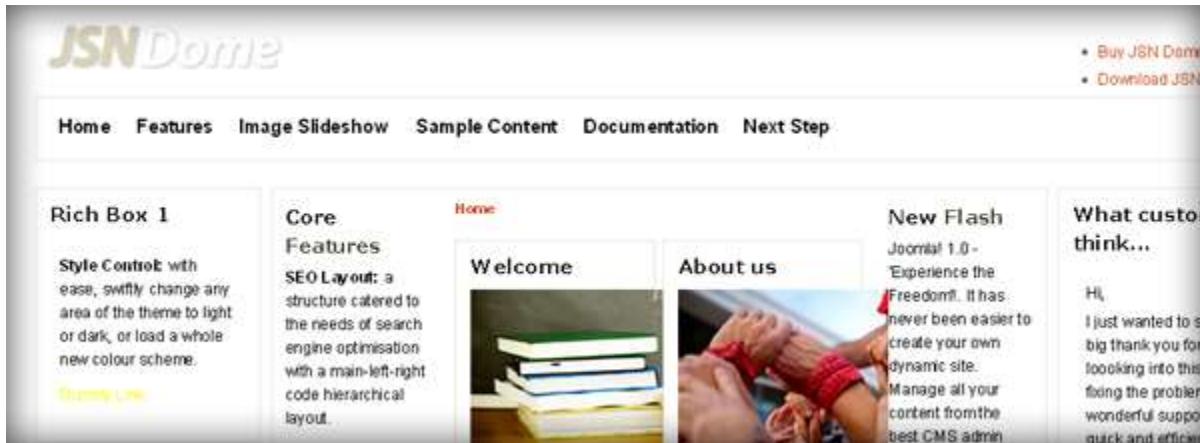

- Enable 'Go to top' link No Yes
- Enable Auto Icon links No Yes
- Enable Printing Optimization No Yes

Enable Auto Icon Links

If you enable this feature, the icons will be automatically attached to links based on the link URL.

Printing Optimization **PRO**

This feature will give your website visitors a totally optimized page for a printer with only the important content included. This is very useful when you want your website visitors to be able to print only the main content of the page and nothing else like the side-column content, etc.

Before printing optimization

After printing optimization

As you can see on screenshots, not only the content is simplified, but also the styling is optimized to get pure black on white ready for printing page.

At anytime, you can turn this feature off so the whole page will be output to a printer.

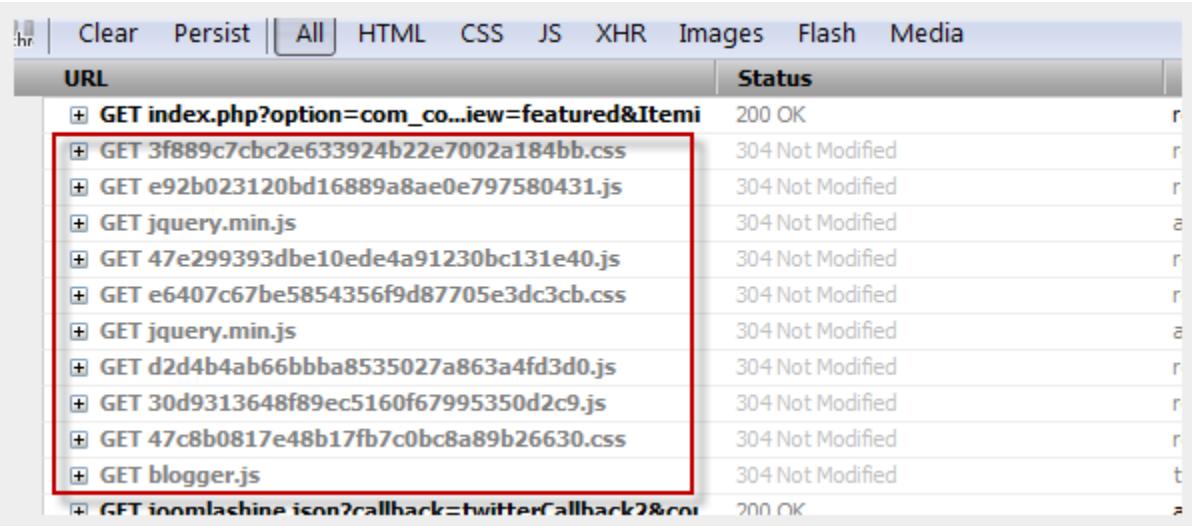

CSS/JS Compression **PRO**

At JoomlaShine.com, we put great effort into optimizing our templates performance with multiple techniques like image sprites application, clean html code output and now one new step – **CSS/JS Compression**.

What it does is combining all continuous CSS/JS files into compressed files and deliver it in GZIP compressed state to browser. The order of CSS/JS files is the same before and after the compression.

Clear	Persist	All	HTML	CSS	JS	XHR	Images	Flash	Media
URL					Status	Dom			
[+ GET index.php?option=c...eatured&Itemid=435					200 OK		192.168.1.100		
[+ GET modal.css					304 Not Modified		192.168.1.100		
[+ GET k2.css					304 Not Modified		192.168.1.100

GET blogger.js	304 Not Modified
GET joomlashine/icon?callback=twitterCallback2&no	200 OK

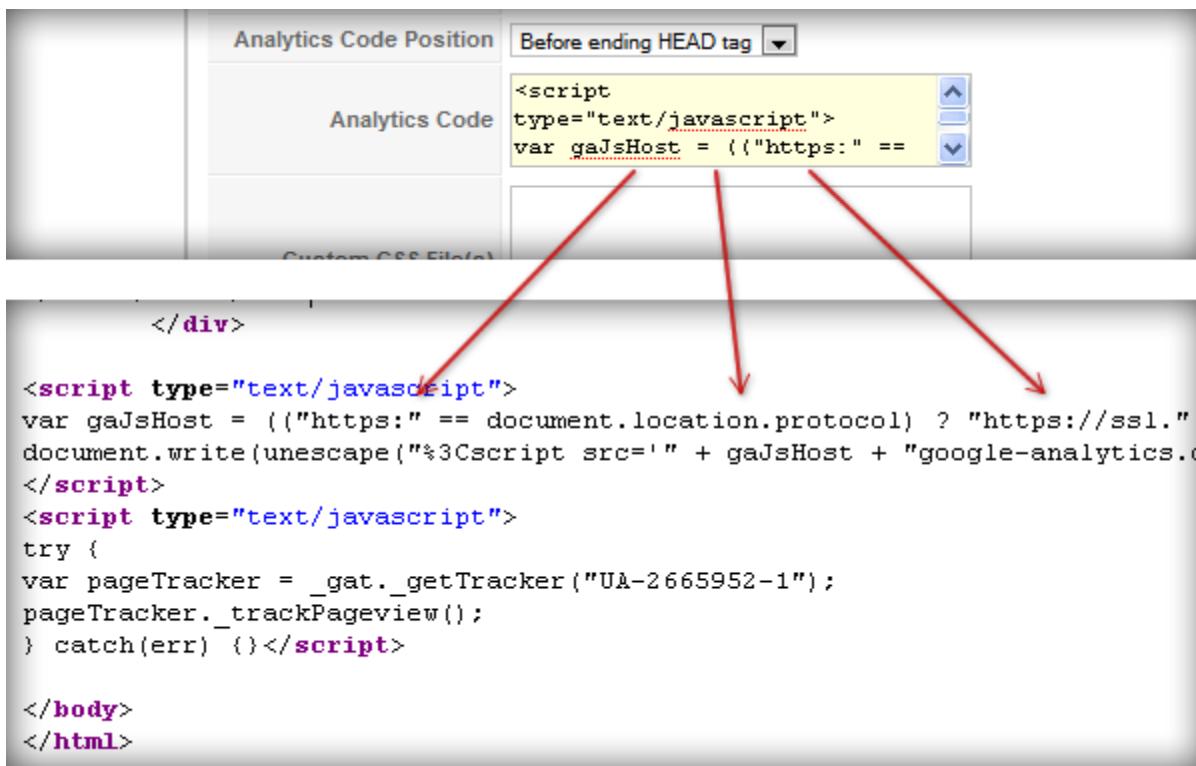

After enabling CSS/JS compression

This feature significantly reduces http request number to server as well as overall loading size, which results in 35% performance boost.

You can configure the compression settings in the section “**Assets Compression**”:

- **Compress CSS/JS:** Allows you to select to compress both CSS and JS, Only CSS, Only JS or nothing.
- **Max File Size:** Defines the maximum size a compressed file should be.
- **Exclude from compression:** Set a list of files you don't want to be compressed.
- **Cache Directory:** Specify the directory for storing compressed CSS/JS files.

Analytics Code PRO

This feature allows you to present any analytical code on your website HTML code by template parameter without having to edit **index.php** file. For example: Google Analytics code, CrazyEgg code, etc.

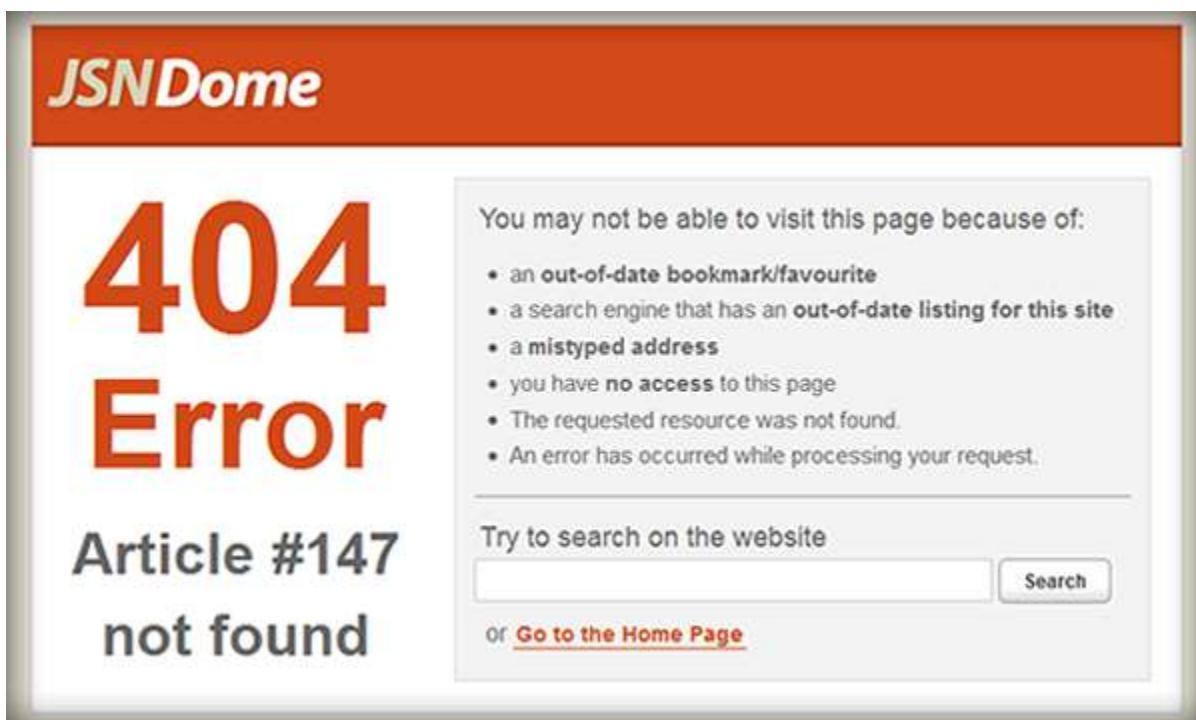

Analytics Code Position

You can define where to insert the code by template parameter **Analytics Code Position**. There are two options to choose from:

- Before ending ...**</head>** tag
- Before ending ...**</body>** tag

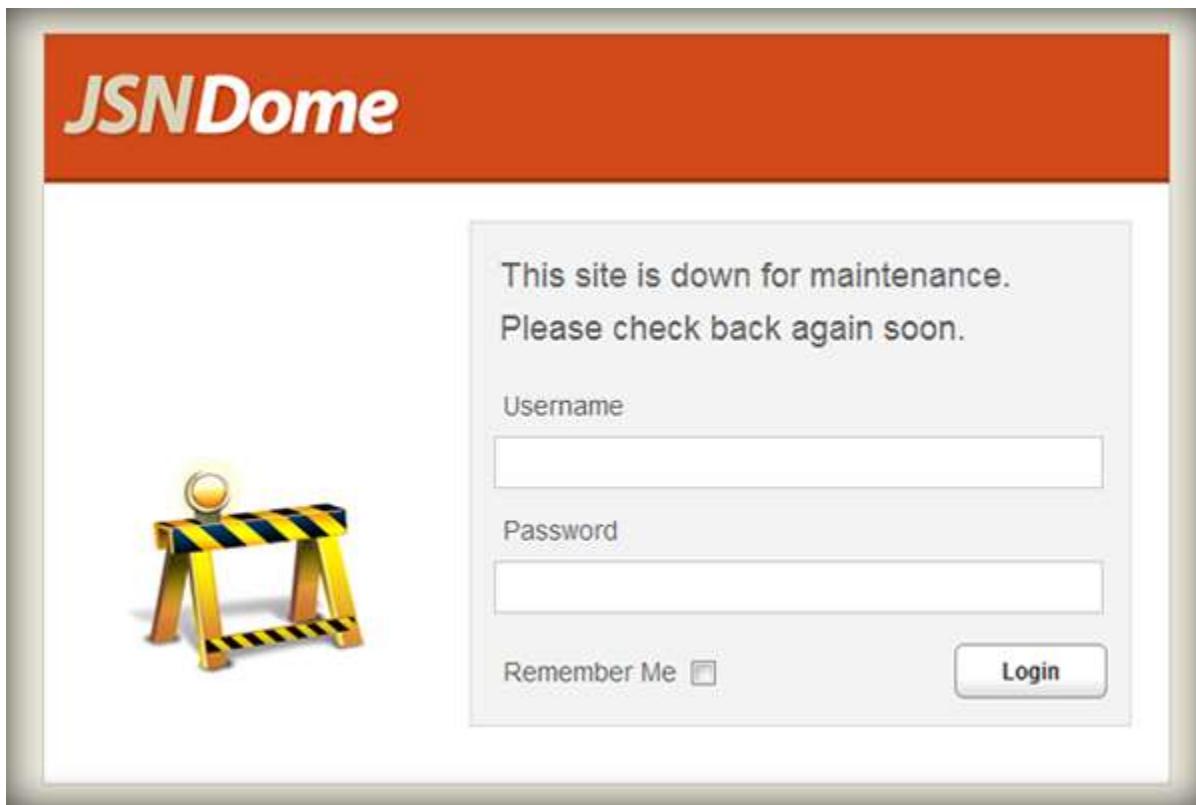

Custom 404 Error Page PRO

The default error page comes from Joomla! is super ugly and sure to scare people away from your site at first glance, so begin from JSN Dome 2.2.x we provide a clean and good looking **Custom 404 Error** page for your need.

Custom Offline Page PRO

The default Joomla! offline page hasn't changed much since the old days and doesn't really look good. Therefore, we provide a **Custom Offline** page with professional and easy to customize your own way.

Custom CSS File(s) PRO

This feature allows you to load multiple custom CSS files along with template default files. If you enable **CSS/JS Compression** feature, all custom CSS files will be compressed as well. This feature is very useful, when you have special dedicated CSS file for content styling.

The top part of the image shows the Joomla template configuration interface. In the 'Custom CSS File(s)' section, two file names are listed: 'custom-css-file-01.css' and 'custom-css-file-02.css'. A dropdown menu below it is set to 'No'. Red arrows point from the 'custom-css-file-01.css' and 'custom-css-file-02.css' entries in the configuration to the corresponding entries in the Network tab of the browser developer tools, which are labeled 'GET custom-css-file-01.css' and 'GET custom-css-file-02.css'. The bottom part of the image is a screenshot of the browser developer tools Network tab, showing a list of CSS files and their sizes. The custom CSS files are listed among other template CSS files like 'style.css', 'template.css', and 'system.css'. The total size of the network requests is 138.9 KB, with 121.7 KB coming from cache.

Request	Size
GET style.css	494 B
GET template.css	67.8 KB
GET system.css	1.4 KB
GET general.css	2.7 KB
GET template_blue.css	6.4 KB
GET custom-css-file-01.css	6.6 KB
GET custom-css-file-02.css	10.6 KB

9 requests 138.9 KB (121.7 KB from cache)

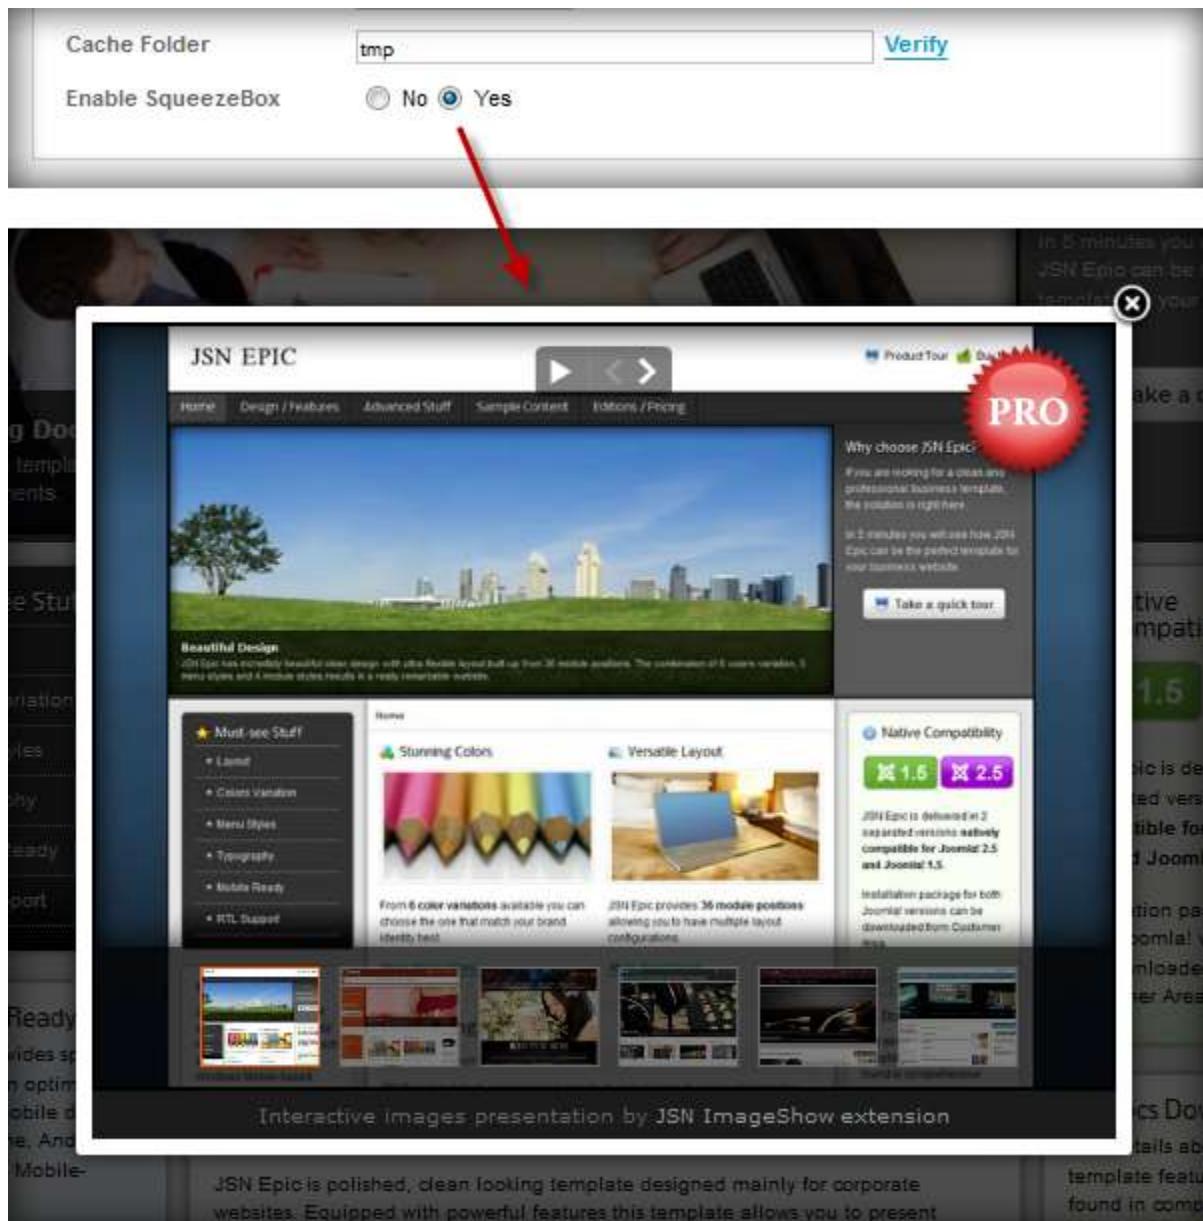

Custom CSS files are loaded among other template CSS files

Just put custom CSS files to template's CSS folder and define them in template parameter **Custom CSS File(s)** each file name at a line.

SqueezeBox PRO

By default, Joomla supports pop-up modals. However, some Joomla versions don't support it. The parameter **Enable SqueezeBox** helps you display pop-up modals with all Joomla versions.

Optimize Script Tags PRO

JSON Dome allows you to optimize script tags. When you enable the parameter “**Optimize Script Tags**” in the tab **SEO & System**, all script tags will be moved from head section to the end of body section.

The screenshot shows the 'SEO & System' configuration page of the JSON Dome template. At the top, there is a radio button labeled 'Optimize Script Tags' with the options 'No' and 'Yes'. The 'Yes' option is selected, indicated by a red arrow pointing to it. Below this, a large red arrow points down to the generated HTML code. The code is a tree-view representation of the page structure, showing the placement of script tags. Most script tags are placed within the body section, except for one script tag located in the head section. This visualizes how enabling the optimization feature moves these tags.

▶ Video tutorial

It guides you how to configure SEO & System visually. Here are [video tutorials](#).

JSON Epic in the video is an example and these instructions can be applied to **JSON templates** template as well.

Multilingual support

In our templates, all wordings of both back-end and front-end are moved to separated language files, so you can easily translate them into any language you want. More information about how to make your own translation can be found in **JSON Dome Customization Manual**.

Currently our templates support **14 primary languages** with more to come in the future.

The screenshot shows the Joomla JSON Dome configuration interface. The top navigation bar includes tabs for 'Started', 'Logo', 'Layout', 'Styling', 'Menu & Site Tools', and 'SEO & Sy...'. The 'Logo' tab is selected. Below the tabs, there are configuration fields: 'Enable Colored Logo' (radio buttons for 'No' and 'Yes', with 'Yes' selected), 'Logo File' (input field containing 'images/logo.png'), 'Mobile Logo File' (input field), 'Logo Link' (input field containing 'index.php'), and 'Logo Slogan' (input field). A tooltip for the 'Logo File' field is displayed, stating: 'Select the image file you want to use as logo. If you want to use the default template logo, click button 'Default''. The text 'English' is centered below the configuration area.

English

The screenshot shows the Joomla JSON Dome configuration interface in German. The top navigation bar includes tabs for 'Get Started', 'Logo', 'Layout', 'Styling', 'Menu & Site Tools', and 'SEO & Sy...'. The 'Logo' tab is selected. Below the tabs, there are configuration fields: 'Aktiviere farbige Logos' (radio buttons for 'Nein' and 'Ja', with 'Ja' selected), 'Logo-Datei' (input field containing 'images/logo.png'), 'Mobile Logo-Datei' (input field), 'Logo Verknüpfung' (input field containing 'index.php'), and 'Logo-Motto' (input field). A tooltip for the 'Logo-Datei' field is displayed, stating: 'Wählen Sie hier das Bild aus, welches Sie als Logo verwenden wollen. Wenn Sie das Standard Template Logo verwenden wollen, klicken Sie auf den Button Löschen'. The text 'German' is centered below the configuration area.

Information about cookies

The [New EU cookie law](#) states that website visitors, subscribers or users **must be provided with clear and comprehensive information about the cookies**: Names, purposes, storage time and access permission.

So in this part, JoomlaShine provides you with the information about cookies that JSON Dome gets from customers.

<i>Type of cookie</i>	<i>Data collection</i>	<i>Purpose to use</i>	<i>Cookie session</i>
JSON_Dome_PRO-color	Color	Save color when users selector	Yes

JSON Dome cookies

These cookies are **used to store text value** for all the JSON Dome functions, to make sure that JSON Dome runs smoothly. Cookies will be **stored in a user's web browser directory** while a user browse a website and **only be removed when users clear cookies**.

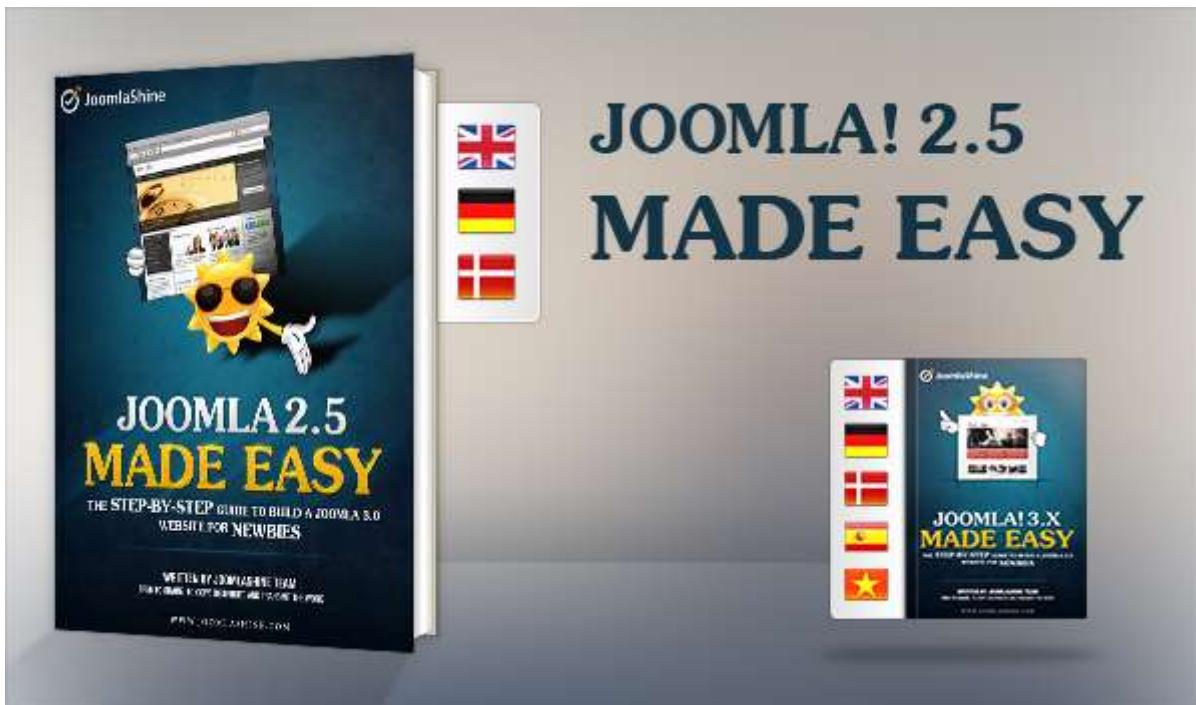

What's next?

Now as you have learnt every feature of the template, it's time to move on and customize it to your needs. Go ahead and open the next documentation coming with the JSON Dome package called **JSON Dome Customization Manual**. In this manual, you will find a detailed description about how to customize every bit of the template to make it suit your needs.

You can download the full documentation package and print for convenient reading.
